Longterm Ambulatory Electrocardiography:

Long-Term Ambulatory Electrocardiography J.R. Roelandt,P.G. Hugenholtz,2012-12-06 Recent technological developments have brought long term ambulatory electro cardiography to the front of clinical cardiology Its application for solving clinical problems potentially related to cardiac arrhythmias is rapidly increasing In the meantime the method has found widespread use in the identification of patients at risk for cardiac death as well as in the assessment of therapeutic interventions It was the purpose of this symposium to bring together an international group of authorities in order both to provide an overall view of the field and to discuss critically the value of clinical epidemiological and research applications of long term ambulatory electrocardiography in the light of new concepts and recent advances The first section of this volume discusses the methodology and the performance criteria of the equipment and analysis systems In the second section the potentials and problems encountered in the use of long term ambulatory electrocardiography for solving clinical questions and for predicting the occurrence of clinically important arrhythmias are extensively as continuous ST segment monitoring blood dealt with New applications such pressure measurement and other physiologic parameters are also included Prevalence variability and prognostic aspects of ventricular arrhythmias both in normals and in patients with cardiac disease are the subject of section 3 The last section provides a critical review of the use of the method for the evaluation of therapeutic interventions with drugs The editors feel that this volume represents the state of the art in this newly important area of clinical cardiology
