**Relativity, Gravitation and Cosmology** Ta-Pei Cheng, 2009-11-07 Einstein's general theory of relativity is introduced in this advanced undergraduate and beginning graduate level textbook. Topics include special relativity in the formalism of Minkowski's four dimensional space time, the principle of equivalence, Riemannian geometry and tensor analysis, Einstein field equation as well as many modern cosmological subjects from primordial inflation and cosmic microwave anisotropy to the dark energy that propels an accelerating universe. The author presents the subject with an emphasis on physical examples and simple applications without the full tensor apparatus. The reader first learns how to describe curved spacetime. At this mathematically more accessible level, the reader can already study the many interesting phenomena such as gravitational lensing, precession of Mercury's perihelion, black holes and cosmology. The full tensor formulation is presented later when the Einstein equation is solved for a few symmetric cases. Many modern topics in cosmology are discussed in this book from inflation, cosmic microwave anisotropy to the dark energy that propels an accelerating universe. Mathematical accessibility together with the various pedagogical devices, e.g. worked out solutions of chapter end problems, make it practical for interested readers to use the book to study general relativity and cosmology on their own.

**Groups of Galaxies in the Nearby Universe** Ivo Saviane, Valentin D. Ivanov, Jordanka Borissova, 2007-08-01 For every galaxy in the field or in clusters there are about three galaxies in groups. The Milky Way itself resides in a group and groups can be found at high redshift. The current generation of 10 m class telescopes and space facilities allows the observation of the members of nearby groups with exquisite detail and their properties can be correlated with the global properties of their host group. Groups in the local Universe offer us the chance to study galaxies in environments characterized by strong interactions. In the cosmological context, groups trace large scale structures better than clusters and the evolution of groups and clusters appears to be related. All these aspects of research on groups of galaxies are summarized in this book written by scientists working in various fields.

**Solar Planetary Systems** Asit B. Bhattacharya, Jeffrey M. Lichtman, 2016-11-25 The authors have put forth great efforts in gathering present day knowledge about different objects within our solar system and universe. This book features the most current information on the subject with information acquired from noted scientists in this area. The main objective is to convey the importance of the subject and provide detailed

information on the physical makeup of our planetary system and technologies used for research Information on educational projects has also been included in the Radio Astronomy chapters This information is a real plus for students and educators considering a career in Planetary Science or for increasing their knowledge about our planetary system 2003

Environmental and Low Temperature Geochemistry presents conceptual and quantitative principles of geochemistry in order to foster understanding of natural processes at and near the earth's surface as well as anthropogenic impacts and remediation strategies It provides the reader with principles that allow prediction of concentration speciation mobility and reactivity of elements and compounds in soils waters sediments and air drawing attention to both thermodynamic and kinetic controls The scope includes atmosphere terrestrial waters marine waters soils sediments and rocks in the shallow crust the temporal scale is present to Precambrian and the spatial scale is nanometers to local regional and global This second edition of Environmental and Low Temperature Geochemistry provides the most up to date status of the carbon cycle and global warming including carbon sources sinks fluxes and consequences as well as emerging evidence for and effects of ocean acidification Understanding environmental problems like this requires knowledge based in fundamental principles of equilibrium kinetics basic laws of chemistry and physics empirical evidence examples from the geological record and identification of system fluxes and reservoirs that allow us to conceptualize and understand This edition aims to do that with clear explanations of fundamental principles of geochemistry as well as information and approaches that provide the student or researcher with knowledge to address pressing questions in environmental and geological sciences New content in this edition includes Focus Boxes one every two or three pages providing case study examples e.g. methyl isocyanate in Bhopal origins and health effects of asbestiform minerals concise explanations of fundamental concepts e.g. balancing chemical equations isotopic fractionation using the  $K_{eq}$  to predict reactivity and useful information e.g. units of concentration titrating to determine alkalinity measuring redox potential of natural waters Sections on emerging contaminants for which knowledge is rapidly increasing e.g. perfluorinated compounds pharmaceuticals and other domestic and industrial chemicals Greater attention to interrelationships of inorganic organic and biotic phases and processes Descriptions theoretical frameworks and examples of emerging methodologies in geochemistry research e.g. clumped C-O isotopes to assess seawater temperature over geological time metal stable isotopes to assess source and transport processes X-ray absorption spectroscopy to study oxidation state and valence configuration of atoms and molecules Additional end of chapter problems including more quantitatively based questions Two detailed case studies that examine fate and transport of organic contaminants VOCs PFCs with data and interpretations presented separately These examples consider the chemical and mineralogical composition of rocks soils and waters in the affected system microbial influence on the decomposition of organic compounds the effect of reduction oxidation on transport of Fe As and

Mn stable isotopes and synthetic compounds as tracers of flow geological factors that influence flow and implications for remediation The interdisciplinary approach and range of topics including environmental contamination of air water and soil as well as the processes that affect both natural and anthropogenic systems make it well suited for environmental geochemistry courses at universities as well as liberal arts colleges

Sectarianism in Medieval India Naseem A. Banerji,2019-04-25 The research for this book was motivated by speculations about the religious movements that may have influenced the plans and arrangements of temples built by the Hoysa as of Karnataka in the period between the twelfth and thirteenth centuries It investigates the causes for the accelerated pace of these constructions enquires about what served as catalysts for the incorporation of multiple shrines within structures examines the factors that gave momentum to the sanctification of a variety of deities within them and studies the characteristics of their style as it was manifested in the temples they commissioned Thought the finest of these are in the Imperial Hoysa a Style in either the Ha ebi or Korava gala types all of the architectural output does not necessarily
