The Book of Lost Light Ron Nyren, 2021-05-12 Joseph Kylander's childhood in early 20th century San Francisco has been shaped by his widowed father's obsessive photographic project and by his headstrong cousin Karelia's fanciful storytelling and impulsive acts. The 1906 earthquake upends their eccentric routines and they take refuge with a capricious patron and a group of artists looking to find meaning after the disaster. **THE BOOK OF LOST LIGHT** explores family loyalty and betrayal, Finnish folklore, the nature of time and theater, and what it takes to recover from calamity and build a new life from the ashes.

Boxing Herbert G. Goldman, 2012-02-06 This four volume reference work covers the history, records, and lore of boxers and boxing. Part I, the longest section, presents alphabetical entries of bare knuckle boxers and the transitional and Queensberry Rules eras with more than 2,600 fighters from the latter. Each entry includes dates of birth and death, place of birth, nicknames, a list of fights, and career statistics. Part II covers non-boxers including referees, promoters, publicists, managers, trainers, cut men, announcers, and others. Part III contains records of world title bouts from 1878 through 2010. Part IV lists various records and champions, both amateur and professional, including the all-time leaders in many statistical categories. Part V describes the organization of the sport, tracing the history of weight divisions, world titles, and halls of fame. Part VI is an overview of boxing in history and culture, champions of ancient Greece, equipment, gymnasiums, radio, and television, literature, drama, the arts, etc. An appendix offers a timeline of boxing, and a bibliography concludes the work.

The Mind of the Horse Michel-Antoine Leblanc, 2013-11-04 Horses were first domesticated about 6,000 years ago on the vast Eurasian steppe, yet only in the last two decades have scientists begun to explore the mental capacities of these animals. In *The Mind of the Horse*, Michel-Antoine Leblanc presents an encyclopedic synthesis of scientific knowledge about equine behavior and cognition, providing experts and enthusiasts alike with an up-to-date understanding of how horses perceive, think about, and adapt to their physical and social worlds. Much of what we think we know about the intelligence of the horse derives from fragmentary reports and anecdotal evidence. Putting this accumulated wisdom to the test, Leblanc introduces readers to rigorous experimental investigations into how horses make sense of their world under varying

conditions He describes the anatomical and neurophysiological characteristics of the horse's brain and compares these features with those of other species to gain an evolutionary perspective A horseman himself Leblanc also considers the opinions of renowned riding masters as well as controversies surrounding the horse's extraordinary mental powers that have stirred in equestrian and scientific circles The Mind of the Horse brings together in one volume the current state of equine research and will likely stimulate surprising new discoveries

Parliament. House of Lords,1902 **Optical Imaging and Microscopy** Peter Török,Fu-Jen Kao,2013-06-05 The motivation to collect contributions from a wide variety of subjects in contemporary optics centered around optical imaging originates from two ideas First it is easy to recognise that certain fields of contemporary optics have been developing in quite a parallel manner Sometimes workers of the different fields discover each other's contributions but mostly they do not One of our major goals is to show how closely these contributions are interrelated Such an example is the development of scanning confocal optical microscopy and optical data storage In the former imaging in the classical sense occurs by scanning a tightly focused laser beam over the sample In optical data storage imaging does not occur as the aim is to detect pits rather than to image them Nevertheless the optical systems of these two arrangements have striking resemblance and hence their governing equations are practically the same The second motivation of this book is to collect contributions from imaging related subjects that were not previously published in this form or they are difficult to access Such examples are a chapter on white light interferometry surface plasmon microscopy or the characterisation of high numerical aperture microscope objective lenses We are extremely pleased that we have contributions in this book from the international leaders of individual fields It has been our privilege to work with these authors and we would like to take this opportunity to thank them all
