Some of the topics covered in the book are the physiology of cerebellum and basal ganglia, description of upper and lower motor neurons, anatomy of the vascular supply to the brain, characteristics of the autonomic nervous system, structure, chemistry, and function of skeletal muscle, the receptors in muscle and cardiopulmonary physiology. The role of muscle spindles in perception of limb position and movement is fully covered. An in-depth account of the physiology of synovial joints and articular cartilage are provided. The cellular and glandular components of the skin are completely presented. A chapter is devoted to the factors involved in wound healing. Another section focuses on the nerve conduction and neuromuscular transmission. The book can provide useful information to doctors, dermatologists, students, and researchers.
