Looking At City Planning An Orion Press:

The CIAM Discourse on Urbanism, 1928-1960 Eric Paul Mumford, 2002 The first history of the Congrès Internationaux d'Architecture Moderne traces the development and promotion of its influential concept of the Functional City *The Modernist City* James Holston, 1989-09-08 The utopian design and organization of Brasília the modernist new capital of Brazil were meant to transform Brazilian society In this sophisticated pioneering study of Brasília from its inception in 1957 to the present James Holston analyzes this attempt to change society by building a new kind of city and the ways in which the paradoxes of constructing an imagined future subvert its utopian premises Integrating anthropology with methods of analysis from architecture urban studies social history and critical theory Holston presents a critique of modernism based on a powerfully innovative ethnography of the city **The affective city** Stefano Catucci, Federico De Matteis, 2022-01-21 Cities are not made only of stone they harbor ways of life practices movements moods atmospheres feelings Yet the ineffable nature of affects has long deprived human passions of a meaningful role when it comes to observing urban space and envisioning its future transformation With this book we explore the contemporary city and its transitional conditions from a different perspective a quest to understand how the space of collective life and the feelings this engenders are connected how they mutually give form to each other In an interdisciplinary collection of essays *The Affective City* means to open a discussion on the soft presences animating the world of urban objects beyond the city built out of mere things this book's focus is on the forces that make urban life emerge thrive flourish but also wither and sometimes die A task crucial for the survival of cities as human habitats in an urban world that with every passing day seems to draw closer a crisis **Urban Design** Jon Lang, 1994 *Urban Design the American Experience* Jon Lang *Urban Design The American Experience* places social and environmental concerns within the context of American history It returns the focus of urban design to the creation of a better world It evaluates the efforts of designers who apply knowledge about the environment and people to the creation of livable enjoyable and even inspiring built worlds *Urban Design The American Experience* emphasizes that urban design must take a user oriented approach to achieve a higher quality of life in human settlements All the keys to this approach are spelled out in chapters that address Urban design as both a product and process of communal decision making Types of knowledge required as a base for urban design action How to apply recent environmental and behavioral research to professional design How human needs are fulfilled through design The true role of functionalism in design Urban design efforts of the twentieth century in the United States are examined within their socio political context Jon Lang reviews the urban design experience from the beginning of the City Beautiful movement paying particular attention to developments since World War II He explores how the twentieth century city has developed as well as discusses the attitudes that have driven major movements in urban design Readers learn a neo Modernist approach that builds on the successes and failures of Rationalism and Empiricism the two major streams of Modernist thought in architecture and urban design They also gain an understanding of

how the environment is experienced by people and the implications of this experiencing for architectural and urban design Numerous illustrations throughout demonstrate how various design schemes can be used Urban Design The American Experience provides architects designers city planners and students in these fields with a model for their own future development as professionals It is a valuable guide to design methodology procedural theory and other issues related to creating optimal urban environments *Planning American Society of Planning Officials, 1973* **Kenzo Tange and the Metabolist Movement** Zhongjie Lin, 2023-08-31 Amid Japan's political turbulence in 1960 seven architects and designers founded Metabolism to propagate radical ideas of urbanism Kenzo Tange's Plan for Tokyo 1960 further celebrated urban expansion as organic processes and pushed city design to an unprecedented scale Metabolists' visionary schemes of the city gave birth to revolutionary design paradigms which reinvented the discourse of modern Japanese architecture and propelled it through the years of Economic Miracle to a global prominence Their utopian concepts which often envisaged the sea and the sky as human habitats of the future reflected fundamental issues of cultural transformation and addressed environmental crises of the postindustrial society This new edition expands Zhongjie Lin's pathbreaking account on Tange and Metabolism centered at the intersection of urbanism and utopianism The thorough historical survey from Metabolism's inauguration at the 1960 World Design Conference to the apex of the movement at Expo 70 and further to the recent demolition of Nakagin Capsule Tower leads to a definition of three Metabolist urban paradigms megastructure group form and ruins which continue to inspire experiments in architecture city design and conservation Kenzo Tange and the Metabolist Movement is a key book for architectural and urban historians architects and all those interested in avant garde design Japanese architecture and contemporary urbanism **Dream Cities** Wade Graham, 2016-05-15 The ideas that became the blueprints for the world we live in **New Media, Old Media** Wendy Hui Kyong Chun, Thomas Keenan, 2006 In this history of new media technologies leading media and cultural theorists examine new media against the background of traditional media such as film photography and print in order to evaluate the multiple claims made about the benefits and freedom of digital media *Le Corbusier, the Dishonest Architect* Malcolm Millais, 2018-01-23 This is not a book for architects but for all those that have suffered consciously and unconsciously from modern architecture and have wondered how it came about This was largely due to one man an architect called Le Corbusier For some he was a genius but the truth is he was a sham a fake a charlatan whose only gift was for self publicity He was the most influential architect of the second half of the twentieth century his influence overwhelmed the architectural profession on a global scale who swallowed his publicity whole and still hold him in awe For the rest of the world the mere mortals his influence was disastrous as traditional buildings were destroyed and replaced by featureless boxes of varying sizes imposing a dreariness hitherto unimagined As usual it was the poor who suffered most as they were herded into tower blocks These were often grouped into estates that ringed many towns and cities which then degenerated into high rise slums with all the well known attendant social problems This book exposes the

myths that surround Le Corbusier detailing the endless failures of his proposals and his projects These were due to his profound dishonesty both as a person and as an architect His legacy was an architectural profession that believed and still believe they were designing buildings based on logic functionality and honesty whereas they were doing the opposite

Embodied Utopias Amy Bingaman, Lise Sanders, Rebecca Zorach, 2003-12-16 Utopia has become a dirty word in recent scholarship on modernism architecture urban planning and gender studies Many utopian designs now appear impractical manifesting an arrogant disregard for the lived experiences of the ordinary inhabitants who make daily use of global public and private spaces The essays in *Embodied Utopias* argue that the gendered body is the crux of the hopes and disappointments of modern urban and suburban utopias of the Americas Europe and Asia They reassess utopian projects masculinist feminist colonialist progressive of the late nineteenth and early twentieth centuries they survey the dystopian landscapes of the present and they gesture at the potential for an embodied approach to the urban future to the changing spaces of cities and virtual landscapes

Benjamin for Architects Brian Elliott, 2010-12-10 Walter Benjamin has become a decisive reference point for a whole range of critical disciplines as he constructed a unique and provocative synthesis of aesthetics politics and philosophy Examining Benjamin's contributions to cultural criticism in relation to the works of Max Ernst Adolf Loos Le Corbusier and Sigfried Giedion this book also situates Benjamin's work within more recent developments in architecture and urbanism This is a concise coherent account of the relevance of Walter Benjamin's writings to architects locating Benjamin's critical work within the context of contemporary architecture and urbanism

The Urban Design Reader Michael Larice, Elizabeth Macdonald, 2013-05-07 The second edition of *The Urban Design Reader* draws together the very best of classic and contemporary writings to illuminate and expand the theory and practice of urban design Nearly 50 generous selections include seminal contributions from Howard Le Corbusier Lynch and Jacobs to more recent writings by Waldheim Koolhaas and Sorkin Following the widespread success of the first edition of *The Urban Design Reader* this updated edition continues to provide the most important historical material of the urban design field but also introduces new topics and selections that address the myriad challenges facing designers today The six part structure of the second edition guides the reader through the history theory and practice of urban design The reader is initially introduced to those classic writings that provide the historical precedents for city making into the twentieth century Part Two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid 1990s These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places The authors in Part Three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places These selections are largely describing the outcomes of mid century urban design and voicing concerns over the placeless quality of contemporary urbanism The fourth part of the Reader explores key issues in urban design and development Ideas about sprawl density community health public space and

everyday life are the primary focus here Several new selections in this part of the book also highlight important international development trends in the Middle East and China Part Five presents environmental challenges faced by the built environment professions today including recent material on landscape urbanism sustainability and urban resiliency The final part examines professional practice and current debates in the field where urban designers work what they do their roles their fields of knowledge and their educational development The section concludes with several position pieces and debates on the future of urban design practice This book provides an essential resource for students and practitioners of urban design drawing together important but widely dispersed writings Part and section introductions are provided to assist readers in understanding the context of the material summary messages impacts of the writing and how they fit into the larger picture of the urban design field

Urban Design Jon T. Lang, 2005 Presents a range of 50 international case studies to demonstrate the variety of urban design efforts This book enables students and professionals to understand the meaning of urban design and illustrates how urban design guidelines and processes have been used in a range of projects around the world

Housing and the City Katharina Borsi, Didem Ekici, Jonathan Hale, Nick Haynes, 2022-06-28 Housing and the City explores housing histories theories and projects in diverse geographies It presents a geographically dispersed history of the twentieth century modern housing project and its social diagram juxtaposed with case studies from the past and the present that suggest that we can live and work differently While the contributions are diverse in their theoretical approach and geographical situation their juxtaposition yields transversal connections in the conception of the home and the city and highlights the diversity of architectural solutions in the formation of housing and its communities The collection also reveals architecture's contribution to the construction of the self and communities the individual and the collective as both urban spatial entities and socio political concepts Housing and the City provides essential reading for students academics and practitioners interested in the history theory or current design of housing At a time when cities are witnessing new ways of working changing social demographics increased geographical mobility and mass migrations as well as the pervasive threat of the climate crisis all trends exacerbated by the Covid 19 pandemic Housing and the City presents a historical and theoretical reflection on the question what does it mean to be at home in the city in the twenty first century

Le Corbusier's Venice Hospital Project Mahnaz Shah, 2017-05-15 While Le Corbusier's urban projects are generally considered confrontational in their relationship to the traditional urban fabric his proposal for the Venice hospital project remained an exercise in preserving the medieval fabric of the city of Venice through a systemic replication of its urban tissue

This book offers a detailed study of Le Corbusier's Venice hospital project as a plausible built entity. In addition, it analyses it in the light of its supposed affinity with the medieval urban configuration of the city of Venice. No formal attempt to date has been made to critically analyse the hospital project's design considerations in comparison to the medieval urban configuration of the city of Venice. Using a range of methodologies including those from architectural theory and history, using archival resources on site analysis and interviews with important resource persons, this book is an interpretation of the conceptual basis for Le Corbusier's understanding of the structural formulation of the city of Venice as mentioned in *The Radiant City* 1935. In doing so, it deciphers the diagrammatic analysis of the city structure found in this work into a set of coherent design modules that were applied in the hospital project and that could become a point of further investigation. Architects and other architecturally interested laypeople with an interest in Venice will find the book a valuable addition to their knowledge. For architectural historians, the book makes an important link between modernism and the historically grown Venice.

Basics Urban Building Blocks Thorsten Bürklin, Michael Peterek, 2017-05-22. Our cities and neighborhoods are composed of urban building blocks, and a knowledge of these elementary components is part of the basic equipment of city planning. It is absolutely essential for urban design that one understands their form and structure, their functional conditions, and the differentiation into private and public spheres, as well as the ways they are networked into their surroundings. Study of these city building blocks represents a first step toward understanding and successfully developing the built structure of the city as a physical and social habitat. Themes are the row, the block, the courtyard, the block in reverse, the passageway, the line, the solitaire, the group, the shed.

Big House Little City Benedict Zucchi, 2023-09-08. Shortlisted for the Architectural Book Awards 2024. Combining architectural and urban thinking in an unusual and engaging way, this book presents an integrated approach to architectural theory and design. Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered. Explicit references to Alberti's house-city phrase have been made by figures as diverse as the architects Louis Kahn, Aldo Van Eyck, Denys Lasdun, and Niels Torp, and novelist Italo Calvino. But as the book shows, thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects, including Le Corbusier, Frank Lloyd Wright, Alvar Aalto, Eliel Saarinen, Bernard Rudofsky, Hans Scharoun, Leon Krier, Fumihiko Maki, Charles Correa, and Team 10. In doing so, the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity, the Middle Ages, Renaissance, and 20th century. The book explores buildings from across the globe, including lesser-known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy, as well as more recent projects by Niels Torp, Behnisch Architekten, Sou Fujimoto, Peter Barber, and WOHA. It concludes with practical case studies of residential, health, education, and workplace

projects from different countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made *Democracy and the Claims of Nature* Ben A. Minter, Bob Pepperman Taylor, 2002 In *Democracy and the Claims of Nature* the leading thinkers in the fields of environmental political and social theory come together to discuss the tensions and sympathies of democratic ideals and environmental values The prominent contributors reflect upon where we stand in our understanding of the relationship between democracy and the claims of nature *Democracy and the Claims of Nature* bridges the gap between the often competing ideals of the two fields leading to a greater understanding of each for the other
