Man-Machine-Environment System Engineering
Shengzhao Long, Balbir S. Dhillon, Long Ye, 2024-09-28. From this book, readers will learn the best research topics and the latest development trend in MMESE theory and application. Man-Machine-Environment System Engineering (MMESE) is a scientific study on the design concepts and quantitative analysis of a complex giant system using physiology, psychology, system engineering, computer science, environment science, management theory, education and other related disciplines. MMESE focuses mainly on the relationship and the optimum combination between Man, Machine and Environment. The three optimized goals of the MMESE study are safety, efficiency and economy. Researchers and professionals who study a human-centered interdisciplinary subject crossing above disciplines will be mostly benefited from this proceedings. In 1981, with direct support from one of the greatest modern Chinese scientists, Xuesen Qian, Man-Machine-Environment System Engineering (MMESE) the integrated and advanced science research topic was established in China by Professor Shengzhao Long. Man-Machine-Environment System Engineering Proceedings of the 24th Conference on MMESE is the academic showcase of latest research papers selected from more than 500 submissions in this field in 2024.

Computers in the Human Interaction Loop
Alexander Waibel, Rainer Stiefelhagen, 2009-04-05. This book integrates a wide range of research topics related to and necessary for the development of proactive smart computers in the human interaction loop, including the development of audio-visual perceptual components for such environments; the design, implementation and analysis of novel proactive perceptive services supporting humans; the development of software architectures, ontologies and tools necessary for building such environments and services; as well as approaches for the evaluation of such technologies and services. The book is based on a major European Integrated Project CHLI. Computers in the Human Interaction Loop and throws light on the paradigm shift in the area of HCI that rather than humans interacting directly with machines, computers should observe and understand human interaction and
