Paul Halmos Celebrating 50 Years Of Mathematics:

PAUL HALMOS Celebrating 50 Years of Mathematics John Ewing, F.W. Gehring, 2012-12-06 Paul Halmos will celebrate his 75th birthday on the 3rd of March 1991 This volume from colleagues is an expression of affection for the man and respect for his contributions as scholar writer and teacher It contains articles about Paul about the times in which he worked and the places he has been and about mathematics Paul has furthered his profession in many ways and this collection reflects that diversity Articles about Paul are not biographical but rather tell about his ideas his philosophy and his style Articles about the times and places in which Paul has worked describe people events and ways in which Paul has influenced students and colleagues over the past 50 years Articles about mathematics are about all kinds of mathematics including operator theory and Paul's research in the subject This volume represents a slice of mathematical life and it shows how many parts of mathematics Paul has touched It is fitting that this volume has been produced with the support and cooperation of Springer Verlag For over 35 years Paul has contributed to mathematics publishing as founder and editor of many outstanding series

Paul Halmos John H. Ewing, Paul R. Halmos, F. W. Gehring, 1991-01-01 *A Glimpse at Hilbert Space Operators* Sheldon Axler, Peter Rosenthal, Donald Sarason, 2011-04-13 Paul Richard Halmos who lived a life of unbounded devotion to mathematics and to the mathematical community died at the age of 90 on October 2 2006 This volume is a memorial to Paul by operator theorists he inspired Paul's initial research beginning with his 1938 Ph D thesis at the University of Illinois under Joseph Doob was in probability ergodic theory and measure theory A shift occurred in the 1950s when Paul's interest in foundations led him to invent a subject he termed algebraic logic resulting in a succession of papers on that subject appearing between 1954 and 1961 and the book *Algebraic Logic* published in 1962 Paul's first two papers in pure operator theory appeared in 1950 After 1960 Paul's research focused on Hilbert space operators a subject he viewed as encompassing finite dimensional linear algebra Beyond his research Paul contributed to mathematics and to its community in manifold ways as a renowned expositor as an innovative teacher as a tireless editor and through unstinting service to the American Mathematical Society and to the Mathematical Association of America Much of Paul's influence owed at a personal level Paul had a genuine uncalculating interest in people he developed an enormous number of friendships over the years both with mathematicians and with nonmathematicians Many of his mathematical friends including the editors of this volume while absorbing abundant quantities of mathematics at Paul's knee learned from his advice and his example what it means to be a mathematician

Introduction to Large Truncated Toeplitz Matrices Albrecht Böttcher, Bernd Silbermann, 2012-12-06 *Introduction to Large Truncated Toeplitz Matrices* is a text on the application of functional analysis and operator theory to some concrete asymptotic problems of linear algebra The book contains results on the stability of projection methods deals with asymptotic inverses and Moore Penrose inversion of large Toeplitz matrices and embarks on the asymptotic behaviour of the norms of inverses the pseudospectra the singular values and the eigenvalues of large Toeplitz matrices The approach is

heavily based on Banach algebra techniques and nicely demonstrates the usefulness of C^* algebras and local principles in numerical analysis The book includes classical topics as well as results obtained and methods developed only in the last few years Though employing modern tools the exposition is elementary and aims at pointing out the mathematical background behind some interesting phenomena one encounters when working with large Toeplitz matrices The text is accessible to readers with basic knowledge in functional analysis It is addressed to graduate students teachers and researchers with some inclination to concrete operator theory and should be of interest to everyone who has to deal with infinite matrices Toeplitz or not and their large truncations

The Ultimate Challenge Jeffrey C. Lagarias, 2023-04-19 The $3x+1$ problem or Collatz problem concerns the following seemingly innocent arithmetic procedure applied to integers If an integer x is odd then multiply by three and add one while if it is even then divide by two The $3x+1$ problem asks whether starting from any positive integer repeating this procedure over and over will eventually reach the number 1 Despite its simple appearance this problem is unsolved Generalizations of the problem are known to be undecidable and the problem itself is believed to be extraordinarily difficult This book reports on what is known on this problem It consists of a collection of papers which can be read independently of each other The book begins with two introductory papers one giving an overview and current status and the second giving history and basic results on the problem These are followed by three survey papers on the problem relating it to number theory and dynamical systems to Markov chains and ergodic theory and to logic and the theory of computation The next paper presents results on probabilistic models for behavior of the iteration This is followed by a paper giving the latest computational results on the problem which verify its truth for $x \leq 4 \cdot 10^{18}$ The book also reprints six early papers on the problem and related questions by L Collatz J H Conway H S M Coxeter C J Everett and R K Guy each with editorial commentary The book concludes with an annotated bibliography of work on the problem up to the year 2000
