Pavement Evaluation & Resurfacing

Client City of Perrysburg

Location Perrysburg, Ohio

Services Transportation, Traffic Engineering

Construction Cost N/A

DGL was requested by the City of Perrysburg to assess the existing conditions of the 150 plus miles of asphalt and jointed concrete roadway within the corporation limits. The City wanted to obtain an unbiased rating of the current street conditions so future pavement rehabilitations and/or preventative maintenance could be addressed in a systematic and cost effective approach. In addition to an existing condition ranking, our report recommended types of repairs as well as estimated costs for such repairs.

The method used by DGL for assessment and ranking of the City streets was in accordance with ODOT's 2006 Manual – Pavement Conditions Rating System.

As a result of our evaluation project, DGL was contracted for the City's 2015 Resurfacing Program. This project consisted of a \$1.2 million construction budget. Our scope included rehabilitation and resurfacing of 15 streets, with a mix of urban and rural classifications. Thirteen of the streets were mill and resurface and two were full depth reclamations (FDR).

Pavement Evaluation Using Road Meters Special Report 133:

Special Report - Highway Research Board National Research Council (U.S.). Highway Research Board, Pavement Evaluation Using Road Meters, 1973 Many instruments are available for measuring pavement roughness Some of these instruments are costly and obtain very detailed data Most require that pavement condition be measured at low speeds thus demanding that production rates be quite low For many years engineers have been searching for a device that gives the required information but is inexpensive to produce and operate The road meter first developed by Max P Brokaw is a simple device that essentially measures the relative movement of the rear axle of a passenger car with respect to the frame of the car This device permits obtaining a large amount of data and can in fact be operated by 1 person in a passenger car although generally 2 individuals are required Because the instrument is new a need has existed to bring together engineers and researchers who are using the device to discuss the experience of various agencies in obtaining pavement condition data by this technique Special Report National Research Council (U.S.).
