Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation Sohaib A. Khan, George M. Stancel, 1993-12-17 Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation reviews current information regarding the complex nature of hormone induced cell growth and differentiation The contributors examine the emerging consensus that protooncogenes and growth factors mediate perhaps the most crucial steps leading to cell growth and differentiation The primary objective of this book is to unite the status of current research related to protooncogenes and growth factors from diverse physiological systems to help readers gain a comprehensive understanding of the subject Leading researchers have contributed outstanding chapters pertaining to steroid hormone regulated cell growth and differentiation in normal and or neoplastic tissues This book will appeal to basic science researchers clinicians industrial researchers and graduate students

Orbital Tumors Zeynel A. Karcioglu, 2006-01-16 From the Preface About every ten years a new book appears on any given medical specialty subject Naturally this is not because the entire body of knowledge on that specialty is overhauled every ten years but because the progress made over a decade usually warrants expressing new perspectives on quite a few diseases Orbital oncology certainly qualifies as a subspecialty that merits an update every decade At least two or three excellent textbooks on orbital tumors have been written since the mid 1980s This book reports advances in knowledge about orbital diseases and their treatment and offers an up to date single volume reference for orbital tumors with particular emphasis on new improvements in diagnostic and therapeutic measures Part I comprises advances in oncogenesis and its relationship to orbital tumors Changes in the biological behavior of diseases in the general patient population are much slower than technological advances nevertheless those alterations take place as well One of the major medical issues of our time for example is the changes in the immunological status of individuals This issue influences the entire field of medicine particularly oncology including the treatment of orbital tumors Chapters 2 to 5 summarize these influences Medical genetics gained momentum during the past two decades and now affects the clinical practice of almost every discipline of medicine including ophthalmology and orbitology Chapters on principles of molecular genetics and immunosurveillance mechanisms of neoplasia and on the occurrence of multiple malignant neoplasms in retinoblastoma have been included to apply molecular concepts to clinical practice related to orbital tumors Advances in one discipline often directly benefit practice in another field In orbitology no development has been more influential than the revolution in imaging techniques including ultrasonography computerized

tomography and magnetic resonance methods Four chapters in Part II are devoted to the role of imaging in diagnosis of orbital tumors Other diagnostic advances entailing immunohistochemistry flow cytometry gene microarray and the polymerase chain reaction are summarized in a separate chapter on orbital biopsy

Oncogenes Kathy B. Burck, Edison T. Liu, James W. Larrick, 2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his platform having been the chemical characterization of the tobacco mosaic virus as a pure protein core ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers
