Community Governance in

China Wu Xiaolin, 2024-10-02 This book provides an overview of China's distinctive community governance examining its 2000 year history and describing its recent development under the leadership of the Communist Party of China. The book presents new insights into community governance in China. It explores the historical genesis of community governance in imperial China providing a link that helps to understand the relationship between ancient and modern community governance. By explaining the practical differences between centralised governance and networked governance in these contexts it moves away from the myth of Tennesian community and dissects the conceptual differences between Chinese and Western communities. This book is unique in its focus on the economic structure that underlies community governance and its identification of the root cause. It also investigates China's political community and the relationship between the state, society and the family. Finally the book proposes a potential approach for transitioning from a binary opposition between the state and society to a new mechanism of state created society and building associated communities. This volume will be a valuable reference for scholars and students of Chinese politics, public management and sociology as well as for practitioners of community governance. *Citizen 2.0: Public and Governmental Interaction through Web 2.0 Technologies* Kloby, Kathryn, D'Agostino, Maria J., 2012-03-31 This book defines the role of Web 2.0 technologies in government and highlights a variety of strategies and tools public administrators can use to engage citizens including suggestions for adoption and implementation based on the lessons learned by scholars and practitioners in the field. Provided by publisher. *Branding in Governance and Public Management* Jasper Eshuis, E.H. Klijn, 2012-01-30 Politicians and public managers utilize branding to communicate with the public as well as to position themselves within the ever present media now so central to political and administrative life. They must further contend with stakeholders holding contradictory opinions about the nature of a problem, the desirable solutions and the values at stake. Branding is used as a strategy to manage perceptions, motivate stakeholders, communicate clear messages in the media and position policies and projects. Brands have a unique ability to simplify such messages and motivate different actors to invest their energy in governance processes. Public administration scholars so far have however paid little attention to branding. This book provides a systematic analysis of branding as a phenomenon in governance. It deals with the nature of public branding, its relation to existing theories in public administration, the way branding is used as a managerial strategy in governance processes and the risks and limitations of branding. *Branding in Public Governance and Management* highlights the growing importance of public branding as a public management strategy to influence political events, decision making processes and outcomes in governance processes. *Sustainable Road Infrastructure Project Implementation in Developing Countries* Simon Ofori Ametepye, Clinton Ochi Aigbavboa, Wellington Didibhuku Thwala, 2023-11-17 The authors offer road infrastructure stakeholders with a precise and functional tool that promotes collaboration, common language and comprehension, engagement and interaction among all individuals and institutions involved in sustainable road infrastructure project implementation. *Innovations in Public Leadership*

Development Ricardo S. Morse, Terry F. Buss, 2014-12-18 This is the best single source guide to leadership development in the public sector. It offers a wealth of advice for teachers, students, trainers, human resource officers, and established leaders. The all original chapters include discussions of leadership frameworks, competencies for public leaders for the new governance, and strategies for senior leaders in government. The book's wide ranging coverage includes in depth discussions of specific approaches to learning methods such as action learning and social artistry, as well as presentations of leader development models such as transformational stewardship and global leadership. The contributors present experiences from real world leadership development programs and the book situates leader development within the current trends of networks, collaboration, and boundary crossing work in the public sector. *Making Smart Cities More Playable* Anton

Nijholt, 2019-07-23 This book explores the ways in which the broad range of technologies that make up the smart city infrastructure can be harnessed to incorporate more playfulness into the day to day activities that take place within smart cities, making them not only more efficient but also more enjoyable for the people who live and work within their confines. Agenda J. Ramon Gil-Garcia, Theresa A. Pardo, Taewoo Nam, 2015-09-07 This book will provide one of the first comprehensive approaches to the study of smart city governments with theories and concepts for understanding and researching 21st century city governments, innovative methodologies for the analysis and evaluation of smart city initiatives. The term smart city is now generally used to represent efforts that in different ways describe a comprehensive vision of a city for the present and future. A smarter city infuses information into its physical infrastructure to improve conveniences, facilitate mobility, add efficiencies, conserve energy, improve the quality of air and water, identify problems and fix them quickly, recover rapidly from disasters, collect data to make better decisions, deploy resources effectively, and share data to enable collaboration across entities and domains. These and other similar efforts are expected to make cities more intelligent in terms of efficiency, effectiveness, productivity, transparency, and sustainability among other important aspects. Given this changing social, institutional, and technology environment, it seems feasible and likeable to attain smarter cities, and by extension smarter governments, virtually integrated, networked, interconnected, responsive, and efficient. This book will help build the bridge between sound research and practice expertise in the area of smarter cities and will be of interest to researchers and students in the e-government, public administration, political science, communication, information science, administrative sciences, and management, sociology, computer science, and information technology. As well as government officials and public managers who will find practical recommendations based on rigorous studies that will contain insights and guidance for the
