*Handbook of Public Economics* Martin Feldstein, A.J. Auerbach, 2002-01-25 The Field of Public Economics has been changing rapidly in recent years and the sixteen chapters contained in this Handbook survey many of the new developments As a field Public Economics is defined by its objectives rather than its techniques and much of what is new is the application of modern methods of economic theory and econometrics to problems that have been addressed by economists for over two hundred years More generally the discussion of public finance issues also involves elements of political science finance and philosophy These connections are evidence in several of the chapters that follow Public Economics is the positive and normative study of government's effect on the economy We attempt to explain why government behaves as it does how its behavior influences the behavior of private firms and households and what the welfare effects of such changes in behavior are Following Musgrave 1959 one may imagine three purposes for government intervention in the economy allocation when market failure causes the private outcome to be Pareto inefficient distribution when the private market outcome leaves some individuals with unacceptably low shares in the fruits of the economy and stabilization when the private market outcome leaves some of the economy's resources underutilized The recent trend in economic research has tended to emphasize the character of stabilization problems as problems of allocation in the labor market The effects that government intervention can have on the allocation and distribution of an economy's resources are described in terms of efficiency and incidence effects These are the primary measures used to evaluate the welfare effects of government policy

**Household Savings in Selected Southern European Countries Evidence from Cross-Country Micro-Level Data** Mr. Kamil Dybczak, Shiqing Hua, Mariusz Jarmuzek, Ruifeng Zhang, Yipei Zhang, 2023-07-21 The paper looks into the puzzle of low household savings in three Southern European SE3 countries Cyprus Greece and Portugal Building on the household saving drivers literature we employ cross country micro level data and investigate the key saving patterns examining their heterogeneity across households in SE3 countries relative to the EA average The results confirm the prominent role of income along with interest rate inflation fiscal balance and debt in shaping household savings in SE3 countries Quantile regressions employed to analyze saving behavior across the distribution of households suggest that households with lower savings tend to see their savings dip or dissavings rise more than proportionately with shocks to income interest rate inflation and government balance Our policy simulations across the distribution of households suggest that targeted rather than universal policy intervention could improve household savings especially of the most vulnerable ones
