personal mobility in combination with federal budget incentives that perversely encourage transportation planners to increase congestion. As a result, the automobile, which is accessible to almost every family in the nation and provides unparalleled access to better housing, low cost consumer goods, a choice-driven, affordable life, and freedom, is being deliberately forced off the transportation grid by the expensive solution of little-used high speed trains and urban transit lines. Gridlock presents a wide range of innovative ideas and policy recommendations for creating an effective transportation system improvements that will increase our mobility and pay for themselves, whether it's cars, buses, planes, or trains. At the center of O Toole's solutions are three core principles: those who use transportation facilities should pay for them; negative effects should be dealt with in a cost-efficient manner; and new technologies that will increase mobility at a low cost must be embraced. In Gridlock, Randal O Toole brings energetic and unconventional thinking to transportation strategies that have until now only driven us into the breakdown lane.
