Public Policy And Statistics Case Studies From Rand:

Public Policy and Statistics Sally C. Morton, John E. Rolph, 2000-05-19 A critical yet constructive description of the rich analytical techniques and substantive applications that typify how statistical thinking has been applied at the RAND Corporation over the past two decades Case studies of public policy problems are useful for teaching because they are familiar almost everyone knows something about health insurance global warming and capital punishment to name but a few of the applications covered in this casebook Each case study has a common format that describes the policy questions the statistical questions and the successful and the unsuccessful analytic strategies Readers should be familiar with basic statistical concepts including sampling and regression While designed for statistics courses in areas ranging from economics to health policy to the law at both the advanced undergraduate and graduate levels empirical researchers and policy makers will also find this casebook informative *Causal Inference in Statistics, Social, and Biomedical Sciences* Guido W.

Imbens, Donald B. Rubin, 2015-04-06 This text presents statistical methods for studying causal effects and discusses how readers can assess such effects in simple randomized experiments *Missing Data and Small-Area Estimation* Nicholas T. Longford, 2005-08-05 This book evolved from lectures courses and workshops on missing data and small area estimation that I presented during my tenure as the rst C pion Fellow 2000 2002 For the Fellowship I proposed these two topics as areas in which the academic statistics could contribute to the development of government statistics in exchange for access to the operational details and background that would inform the direction and sharpen the focus of a demic research After a few years of involvement I have come to realise that the separation of academic and industrial statistics is not well suited to either party and their integration is the key to progress in both branches Most of the work on this monograph was done while I was a visiting l turer at Massey University Palmerston North New Zealand The hospitality and stimulating academic environment of their Institute of Information S ence and Technology is gratefully acknowledged I could not name all those who commented on my lecture notes and on the presentations themselves apart from them I want to thank the organisers and silent attendees of all the events and with a modicum of reluctance the grey gures who kept inquiring whether I was any nearer the completion of whatever stage I had been foolish enough to attach a date **Statistical Science in the**

Courtroom Joseph L. Gastwirth, 2012-12-06 Expert testimony relying on scientific and other specialized evidence has come under increased scrutiny by the legal system A trilogy of recent U S Supreme Court cases has assigned judges the task of assessing the relevance and reliability of proposed expert testimony In conjunction with the Federal judiciary the American Association for the Advancement of Science has initiated a project to provide judges indicating a need with their own expert This concern with the proper interpretation of scientific evidence especially that of a probabilistic nature has also occurred in England Australia and in several European countries Statistical Science in the Courtroom is a collection of articles written by statisticians and legal scholars who have been concerned with problems arising in the use of statistical evidence A number of

articles describe DNA evidence and the difficulties of properly calculating the probability that a random individual's profile would match that of the evidence as well as the proper way to interpret the result. In addition to the technical issues, several authors tell about their experiences in court. A few have become disenchanted with their involvement and describe the events that led them to devote less time to this application. Other articles describe the role of statistical evidence in cases concerning discrimination against minorities, product liability, environmental regulation, the appropriateness and fairness of sentences, and how being involved in legal statistics has raised interesting statistical problems requiring further research.

Bibliographie Internationale de Science Politique, 2002-12 IBSS is the essential tool for librarians, university departments, research institutions, and any public or private institution whose work requires access to up-to-date and comprehensive knowledge of the social sciences.

Ordinal Data Modeling Valen E. Johnson, James H. Albert, 2006-04-06 Ordinal Data Modeling is a comprehensive treatment of ordinal data models from both likelihood and Bayesian perspectives. A unique feature of this text is its emphasis on applications. All models developed in the book are motivated by real datasets, and considerable attention is devoted to the description of diagnostic plots and residual analyses. Software and datasets used for all analyses described in the text are available on websites listed in the preface.

Test Equating, Scaling, and Linking Michael J. Kolen, Robert L. Brennan, 2013-03-14 Test equating methods are used with many standardized tests in education and psychology to ensure that scores from multiple test forms can be used interchangeably. In recent years, researchers from the education, psychology, and statistics communities have contributed to the rapidly growing statistical and psychometric methodologies used in test equating. This book provides an introduction to test equating which both discusses the most frequently used equating methodologies and covers many of the practical issues involved. This second edition expands upon the coverage of the first edition by providing a new chapter on test scaling and a second on test linking. Test scaling is the process of developing score scales that are used when scores on standardized tests are reported. In test linking, scores from two or more tests are related to one another. Linking has received much recent attention due largely to investigations of linking similarly named tests from different test publishers or tests constructed for different purposes. The expanded coverage in the second edition also includes methodology for using polytomous item response theory in equating. The themes of the second edition include the purposes of equating, scaling, and linking and their practical context: data collection, designs, statistical methodology, designing reasonable and useful equating, scaling, and linking studies, importance of test development and quality control processes to equating, equating error, and the underlying statistical assumptions for equating. Given the perennial debates about academic standards and grade inflation, it is my view that tools such as those described in this book should be adopted much more widely by the academic community than they are at present. This book provides an excellent overview, and I strongly recommend it. Short Book Reviews of the ISI, April 2005. I highly recommend this book to everybody who has any interest in equating and linking, be they a student, practitioner, or researcher. Psychometrika

2006 **Explanatory Item Response Models** Paul de Boeck, Mark Wilson, 2013-03-09 This edited volume gives a new and integrated introduction to item response models predominantly used in measurement applications in psychology education and other social science areas from the viewpoint of the statistical theory of generalized linear and nonlinear mixed models. Moreover, this new framework allows the domain of item response models to be coordinated and broadened to emphasize their explanatory uses beyond their standard descriptive uses. The basic explanatory principle is that item responses can be modeled as a function of predictors of various kinds. The predictors can be characteristics of items, of persons, and of combinations of persons and items; they can be observed or latent, of either items or persons, and they can be continuous or latent categorical. Thus a broad range of models can be generated, including a wide range of extant item response models as well as some new ones. Within this range, models with explanatory predictors are given special attention, but we also discuss descriptive models. Note that the item responses that we are referring to are not just the traditional test data but are broadly conceived as categorical data from a repeated observations design. Hence data from studies with repeated observations, experimental designs, or with longitudinal designs may also be modeled. The intended audience for this volume is rather broad. The Economics of Fire Protection Ganapathy Ramachandran, 2002-11 This important new book, the first of its kind in the fire safety field, discusses the economic problems faced by decision makers in the areas of fire safety and fire precautions. The author considers the theoretical aspects of cost-benefit analysis and other relevant economic problems with practical applications to fire protection systems. Clear examples are included to illustrate these techniques in action. The work covers the performance and effectiveness of passive fire protection measures such as structural fire resistance and means of escape facilities and active systems such as sprinklers and detectors; the importance of educating for better understanding and implementation of fire prevention through publicity campaigns and fire brigade operations; cost-benefit analysis of fire protection measures and their combinations, taking into account trade-offs between these measures. The book is essential reading for consultants and academics in construction management economics and fire safety as well as for insurance and risk management professionals. **AMSTAT News** American Statistical Association, 2000 **Social Experimentation and Public Policymaking** David H. Greenberg, Donna Links, Marvin Mandell, 2003 Social experimentation randomly assigns individuals or groups to coverage by the policy of interest or a control group, and then the groups are compared in terms of outcome. Greenberg, economics, U of Maryland; Links, mathematics/science and engineering, Community College of Baltimore County; and Mandell, policy sciences, U of Maryland, seek to assess whether the substantial investment in social experimentation in the United States has resulted in significant public policy changes. After explaining the general concepts behind social experimentation, they analyze five case studies and determine that they are not of decisive importance in state policy making but they often serve useful purposes of policy formation.
