

Investigations conducted by the Environmental Protection Agency (EPA) and the National Transportation Safety Board (NTSB) have identified several factors that contributed to the crash, including:

Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group remained sedentary. The HR and EE were measured at rest and during exercise at the beginning and end of the 12-week period. The results showed that the training program significantly increased the HR and EE of the subjects. The HR increased from 68 to 72 beats per minute (b·min⁻¹) at rest and from 145 to 155 b·min⁻¹ during exercise. The EE increased from 1.2 to 1.4 kcal·min⁻¹ at rest and from 3.5 to 4.0 kcal·min⁻¹ during exercise. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary, middle-aged women.
