$$D^{(4)} = 4 \quad , \quad R^{(4)} = 20$$

$$\gamma(\text{Newton}) = \frac{1}{2} \quad , \quad \gamma(\text{Einstein}) = 1$$

$$E = \frac{1}{2}mv^2 \quad , \quad E_{\text{max}} = mc^2$$

$$E = \frac{mc^2}{\sqrt{1 - (v/c)^2}}$$

This formula is due to A. Einstein

$$D^{(22)} = 26 - 4 = 22 \quad , \quad 2R_{(4)} = 512$$

$$\gamma = 1/22$$

$$E_{\text{max}}(\text{Dark}) = (1 - \gamma)mc^2 \\ = 0.9545mc^2$$

$$E = \frac{mc^2}{1 + \frac{mc^2}{E_p}}$$

This formula is due to Magueijo and Smolin.

Here E_p is Planck energy where the Planck mass is $m_p \simeq 10^{19} \text{ Gev}$

Here $D^{(4)} = 4$ is the dimension of Einstein's spacetime, $R^{(4)} = 20$ is the number of independent components of Riemann curvature tensor in four dimensions and $R_{(4)} = 256$ is the number of all the components of the same curvature tensor [2], v is the velocity and c is the speed of light.

Hogan, 2013-06-29 What do we know about the origins of the Universe and more important how do we know it In a small easy to read package this book introduces you to all of the important ideas about the Big Bang and its consequences Craig Hogan explains what happened in the early days of the universe why we think it s expanding and how the expansion can look the same from everyplace at once different ways the universe could end and the meaning of such terms as cosmic inflation cosmic background radiation and dark matter For everyone who has always wondered just what the cosmologists are talking about but could never find the basics explained clearly and simply this is the book to read **Pulling G** Erik Seedhouse, 2012-09-26 Performing in a high G environment is extremely demanding on the body pulling G forces blood to the body s extremities putting the pilot astronaut or driver at risk of G Induced Lack of Consciousness G LOC In Pulling G Erik Seedhouse describes what it feels like to pull 7 G in a fighter plane and the G pressures on the body when driving a Formula 1 car and many other gravity defying vehicles The book relates for the first time the effects of G in both hyper gravity and microgravity It describes the human response to increased and decreased G and the potentially dangerous effects of high G with particular reference to dynamic injuries sustained in high acceleration environments Pulling G provides an overview of G related research and the development of

intervention methods to mitigate the effects of increased and reduced G As well as relating the training required to overcome G forces on the Formula 1 track Erik Seedhouse looks at the G forces encountered in such G environments as ejection from an aircraft launch re entry and zero G The book also considers how artificial gravity can be used to prevent bone demineralization and to reduce the effects of de conditioning in astronauts Erik Seedhouse is eminently qualified to describe the effects of large accelerations on the body In addition to being the author of several previously published Springer Praxis books he has developed astronaut training protocols and is the training director for Astronauts for Hire A4H He is also the Canadian Forces High Risk Acceleration Training Officer *Innovations and New Technologies (v.2)* Alexander

The Hidden Reality Brian Greene,2011-01-25 The bestselling author of *The Elegant Universe* and *The Fabric of the Cosmos* tackles perhaps the most mind bending question in modern physics and cosmology Is our universe the only universe There was a time when universe meant all there is Everything Yet a number of theories are converging on the possibility that our universe may be but one among many parallel universes populating a vast multiverse Here Briane Greene one of our foremost physicists and science writers takes us on a breathtaking journey to a multiverse comprising an endless series of big bangs a multiverse with duplicates of every one of us a multiverse populated by vast sheets of spacetime a multiverse in which all we consider real are holographic illusions and even a multiverse made purely of math and reveals the reality hidden within each Using his trademark wit and precision Greene presents a thrilling survey of cutting edge physics and confronts the inevitable question How can fundamental science progress if great swaths of reality lie beyond our reach *The Hidden Reality* is a remarkable adventure through a world more vast and strange than anything we could have imagined Project J

Nature's Balancing Act Ken Hicks, 2025-04-30 Are the physical laws of our universe finely tuned such that life can exist What does this imply about how our universe formed Questions like these are examined in Nature s Balancing Act presented for a wide audience From the Big Bang to present day research ranging from gravitational waves to experiments on antimatter our physical laws are shown to be slightly off balance allowing life to exist In its opening chapters the following is asked What would happen if the strong nuclear force which binds protons and neutrons together were slightly stronger or weaker Would life still be possible We know today that pushing the nuclear force off balance by just a few percent would create a different universe unlike our own Also for life to exist there must be a slight imbalance in the way matter and antimatter were created in the Big Bang If matter and antimatter were exactly in balance

then our universe would not exist These are just two examples of the fine tuning of physical laws that must happen for the cosmological conditions to be right for life to exist If the universe wasn't just so you wouldn't be here to read about it Even with a favorable universe how did life on Earth begin How did it survive all this time without being wiped out by a cosmic event Can human life continue to exist for millions of years or will we cause our own extinction These topics are considered in the latter chapters of the book and provide a fascinating look at our existence on Earth and the possibility of life elsewhere
