Laser Management of Scars Kayvan Shokrollahi, 2020-11-24 This book addresses the management of scars using lasers and light. The authors provide a comprehensive overview of the current laser modalities and the science and evidence behind them. They also present various treatments including those using carbon dioxide lasers, Erbium YAG lasers, pulsed dye lasers, and Q-switched lasers. The book includes detailed information on the treatment of burn, acne, keloid, and hypertrophic scars, as well as discussions of the complications of laser treatments and ethical and medico-legal issues. Scars have many causes, including trauma and burns, but also medical treatments themselves; scars are an inevitable consequence of most surgery. There have been significant advances in laser and light technology over the last decade, and the management of scars with a variety of lasers has been adopted both in traditional healthcare settings and in the cosmetic sector. Edited by a respected burns and plastic surgeon, this book is a valuable resource for a variety of clinicians, including dermatologists, laser practitioners, physiotherapists, and occupational therapists, burn care professionals, as well as multidisciplinary teams working with patients with scars of all aetiologies.

Critical Care of the Burned Patient Lindsey T. A. Rylah, 1992-10-08 This interdisciplinary account provides an integrated and practical guide to the management and treatment of burns. Experts from all the major disciplines involved in critical care focus their attention on specific problems and areas of treatment involved in the care of burned patients. Although it is essentially a practical guide to the management of thermal injury with explicit recommendations for courses of treatment, it also provides explanatory background information on the manifestations and clinical consequences of this common source of injury. Among them, the contributors encompass all the major facets of critical care of the burned patient: from initial assessment and monitoring, resuscitation, nutritional aspects, infection, anesthesia, and surgical management, right through to postoperative care and prognosis. The volume will be useful to specialists in critical care, intensive and emergency medicine, surgery, and anesthesia, and to all staff associated with intensive care and burns units.
