Uniting a team of international and interdisciplinary scholars this volume considers the views of early twentieth century European thinkers on the creation dissemination and management of publicly available information Interdisciplinary in perspective the volume reflects the nature of the thinkers discussed including Otto Neurath Patrick Geddes the English Fabians Paul Otlet Wilhelm Ostwald and H G Wells The work also charts the interest since the latter part of the nineteenth century in finding new ways to think about and to manage the growing body of available information in order to achieve aims such as the advancement of Western civilization the alleviation of inequalities across classes and countries and the promotion of peaceful coexistence between nations In doing so the contributors provide a novel historical context for assessing widely held assumptions about today s globalized post modern information society This volume will interest all who are curious about the creation of a modern networked information society **Theories of Information, Communication and Knowledge** Fidelia Ibekwe-SanJuan,Thomas M Dousa,2013-08-30

This book addresses some of the key questions that scientists have been asking themselves for centuries what is knowledge What is information How do we know that we know something How do we construct meaning from the perceptions of things Although no consensus exists on a common definition of the concepts of information and communication few can reject the hypothesis that information whether perceived as object or as process is a pre condition for knowledge Epistemology is the study of how we know things anglophone meaning or the study of how scientific knowledge is arrived at and validated francophone conception To adopt an epistemological stance is to commit oneself to render an account of what constitutes knowledge or in procedural terms to render an account of when one can claim to know something An epistemological theory imposes constraints on the interpretation of human cognitive interaction with the world It goes without saying that different epistemological theories will have more or less restrictive criteria to distinguish what constitutes knowledge from what is not If information is a pre condition for knowledge acquisition giving an account of how knowledge is acquired should impact our comprehension of information and communication as concepts While a lot has been written on the definition of these concepts less research has attempted to establish explicit links between differing theoretical conceptions of these concepts and the underlying epistemological stances This is what this volume attempts to do It offers a multidisciplinary exploration of information and communication as perceived in different disciplines and how those perceptions affect theories of knowledge

Encyclopedia of Microcomputers Allen Kent,James G. Williams,1990-10-26 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general
