Dobson Jr.,Bruce T. Liang,Joel Linden,2012-12-06 Following many years when a great deal of attention was directed towards the intracellular roles of purines there is expanding interest in the field of extracellular purinergic signalling In this book we focus on the actions of purines in cardiovascular biology where it is clear that they play major roles in both normal and pathophysiological conditions Activation of different purinoceptor subtypes by purines can regulate cardiac contractility and electrical activity modulate catecholamine mediated responses both pre and post junctionally trigger and mediate ischaemic preconditioning cause vasodilation and vasoconstriction and enhance endothelial proliferation and apoptosis as well as inhibit platelet and neutrophil function This book covers the cardiovascular actions mediated by the major P1 and P2 subclasses of purinoceptors and emphasizes the interactions between these two signalling systems Cardiovascular Biology of Purines covers topics ranging from molecular and cellular to systemic and clinical It also aims to highlight how basic advances have led to the identification of novel targets for cardiovascular therapeutic developments We hope that our book will prove to be timely and helpful **Extracellular ATP and adenosine as regulators of endothelial cell function** Evgenia

Gerasimovskaya,Elzbieta Kaczmarek,2010-04-26 Extracellular purines and pyrimidines ATP ADP UTP and adenosine are released into the extracellular milieu in response to a variety of stress conditions and act as important regulators of vascular homeostasis This new book is uniquely focused on the signaling actions of extracellular purines in endothelial cells and the crucial role of extracellular purines in regulation of angiogenesis vascular tone cell permeability wound healing inflammation and cell to cell communication This book examines the responses of endothelial cells originating from various tissues such as cornea pancreas and uterus to extracellular nucleotides and adenosine under physiological and pathological conditions i e pregnancy hypoxia hypertension inflammation and diabetes In the book s 12 chapters the role of purinergic signaling in endothelium dependent tissue perfusion regulation of endothelial barrier function and angiogenesis are discussed The mechanisms of ATP release and its role in intercellular communication are also presented In addition the book provides the most up to date mechanisms of extracellular nucleotide metabolism by purine converting ecto enzymes and their contribution to purinergic signaling in endothelial cells originating from various vascular beds This book is a valuable resource for biomedical research scientists clinical scientists graduate students and health science professionals interested in the mechanisms of extracellular purine function in endothelial cells under physiologic and pathologic conditions

Glutamate and ATP at the Interface of Metabolism and Signaling in the Brain Vladimir Parpura, Arne Schousboe, Alexei Verkhratsky, 2014-09-18 ATP acts as main energy source and is pivotal for numerous signaling cascades both inside the cells by fuelling various transport systems and donating phosphate groups and between the cells by chemical transmission Similarly glutamate acts as an important molecule for both intercellular signaling through glutamatergic transmission and cell energetics by contributing to ATP production In this collection of chapters written by the leading experts in the field of cell metabolism and energetics intracellular signaling and neurotransmission we covered various aspects of the interfacing between these two fundamental molecules This book will be particularly useful for researchers students physicians and psychotherapists working in the field of neurobiology neurology and psychiatry **Regulation of Coronary Blood Flow** Michitoshi Inoue, Masatsugu Hori, Shoichi Imai, Robert M. Berne, 2013-11-09 Research centering on blood flow in the heart continues to hold an important position especially since a better understanding of the subject may help reduce the incidence of coronary arterial disease and heart attacks This book summarizes recent advances in the field it is the product of fruitful cooperation among international scientists who met in Japan in May 1990 to discuss the regulation of coronary blood flow

Molecular Medical Parasitology Joseph Marr, Tim W. Nilsen, Richard W. Komuniecki, 2002-12-10 A valuable new source Molecular Medical Parasitology is the only text of its kind one that applies broad concepts and current scientific advances from both molecular biology and biochemistry to the study of parasitic organisms An internationally renowned team of scientists and physicians places parasites in their broad biological contexts while still emphasizing the specifics that differentiate these organisms Not only will researchers and faculty in parasitology find this an indispensable guide physicians will benefit from the thorough coverage molecular biology and biochemistry's current influences on treatment and management of parasitic diseases Features the most up to date scientific methods behind the medical management of parasitic diseases Applies the most current synthesis of molecular biology and biochemistry to parasitic organisms Contains many informative figures and clear illustrations **Cellular Signal Processing** Friedrich Marks, Ursula Klingmüller, Karin Müller-Decker, 2017-05-17 Cellular Signal Processing offers a unifying view of cell signaling based on the concept that protein interactions act as sophisticated data processing networks that govern intracellular and extracellular communication It is intended for use in signal transduction courses for undergraduate and graduate students working in biology

biochemistry bioinformatics and pharmacology as well as medical students The text is organized by three key topics central to signal transduction the protein network its energy supply and its evolution It covers all important aspects of cell signaling ranging from prokaryotic signal transduction to neuronal signaling and also highlights the clinical aspects of cell signaling in health and disease This new edition includes expanded coverage of prokaryotes as well as content on new developments in systems biology epigenetics redox signaling and small non coding RNA signaling *Cellular Signaling in Health and Disease* Martin Beckerman, 2009-05-28 In today's world three great classes of non infectious diseases the metabolic syndromes such as type 2 diabetes and atherosclerosis the cancers and the neurodegenerative disorders have risen to the fore These diseases all associated with increasing age of an individual have proven to be remarkably complex and difficult to treat This is because in large measure when the cellular signaling pathways responsible for maintaining homeostasis and health of the body become dysregulated they generate equally stable disease states As a result the body may respond positively to a drug but only for a while and then revert back to the disease state Cellular Signaling in Health and Disease summarizes our current understanding of these regulatory networks in the healthy and diseased states showing which molecular components might be prime targets for drug interventions This is accomplished by presenting models that explain in mechanistic molecular detail how a particular part of the cellular signaling web operates properly in health and improperly in disease The stability of the health and disease associated states is dynamic and supported by multiple feedback loops acting positively and negatively along with linkages between pathways During the past few years an ongoing series of important discoveries have been made that advance our understanding of how the body works and may guide us on how to better deal with these diseases These include the discovery of chronic inflammation as a causal factor in all of these disease classes the appearance of reactive oxygen species as a messenger molecule that can act both positively and negatively the propensity of proteins to misfold into aggregation and disease prone forms and the rise of epigenetics including the emergence of small non coding RNA with important regulatory functions out of the so called junk RNA Chapters are devoted to each of these classes of findings with additional details integrated into the chapters dealing directly with the diseases The connections responsible for maintaining stability are explored in depth Natural Compounds and Their Role in Apoptotic Cell Signaling Pathways, Volume 1171 Marc Diederich, 2009-09-08 Apoptosis is a highly regulated mechanism by which cells undergo cell death in an active way As one of the most challenging tasks concerning cancer is to induce apoptosis in malignant cells researchers increasingly focus on natural products to modulate apoptotic signaling pathways This book reviews the main effects of natural compounds on the different apoptotic signaling pathways including the intrinsic and extrinsic apoptosis pathways the NF- κ B mediated pathway the PI3K/Akt signaling and other main pathways Among the topics specially covered are Effects of natural compounds on cancer cells Natural compounds as inducers of cell death Diet in health and disease Inflammation and cancer Natural compounds as kinase inhibitors Natural compounds in neurodegenerative diseases Natural compounds as

Dakshinamurti,2005-04-04 Cell signaling is at the core of most biological processes from the simplest to the most complex In addition to unicellular organisms possessing the essential ability to receive inputs with regard to nutrient availability and noxious stimuli the cells in multicellular organisms require signaling from adjacent as well as distant cells to maintain

Purinergic Pharmacology Francisco Ciruela,Kenneth A. Jacobson,2019-08-16 **Adenosine** Susan Masino,Detlev Boison,2012-08-30 Homeostasis of key metabolites and metabolic health affects all bodily systems Not surprisingly altered metabolic function is associated with a wide spectrum of dysfunctions in the central nervous system including developmental disorders acute nervous system injury and neurodegenerative disorders Accordingly metabolism based therapies offer significant promise as new category of treatment options designed to limit delay or reverse the disease process by reconstructing homeostatic functions Increasingly it is appreciated that restoring metabolic health could promote normal nervous system activity and improve behavior and cognition Adenosine A Key Link Between Metabolism and Central Nervous System Activity focusses on diverse aspects of adenosine an evolutionarily conserved homeostatic bioenergetic regulator in the central nervous system Because of its interrelationship with ATP adenosine triphosphate adenosine is integral to cell metabolism At the same time adenosine influences neuronal activity directly via receptors and is involved in biochemical processes related to gene expression Thus adenosine is uniquely placed as a reciprocal and rapid link between changes in metabolism and changes in neuronal activity and on a longer time scale to changes in gene expression and long term changes in cell function Leaders in the field feature basic research on adenosine at the cellular level in the central nervous system and relate these findings to its recognized potential in diverse acute and chronic disorders This comprehensive overview of adenosine also highlights emerging adenosine based treatments and associated opportunities for central nervous system disorders **Purinergic Signaling in Health and Disease** Eric Boué-Grabot,David Blum,Stefania Ceruti,2020-03-13
