Multivariate Analysis in the Pharmaceutical Industry Ana Patricia Ferreira, Jose C. Menezes, Mike Tobyn, 2018-04-24 Multivariate Analysis in the Pharmaceutical Industry provides industry practitioners with guidance on multivariate data methods and their applications over the lifecycle of a pharmaceutical product from process development to routine manufacturing focusing on the challenges specific to each step It includes an overview of regulatory guidance specific to the use of these methods along with perspectives on the applications of these methods that allow for testing monitoring and controlling products and processes The book seeks to put multivariate analysis into a pharmaceutical context

for the benefit of pharmaceutical practitioners potential practitioners managers and regulators Users will find a resources that addresses an unmet need on how pharmaceutical industry professionals can extract value from data that is routinely collected on products and processes especially as these techniques become more widely used and ultimately expected by regulators Targets pharmaceutical industry practitioners and regulatory staff by addressing industry specific challenges Includes case studies from different pharmaceutical companies and across product lifecycle of to introduce readers to the breadth of applications Contains information on the current regulatory framework which will shape how multivariate analysis MVA is used in years to come

The Construction of Commercial Contracts JW Carter, 2013-01-04 This book adopts a principled approach to the law applied in the construction of commercial contracts This approach is presented as part of a coherent theory of the law of contract construction which makes a unique contribution to scholarship and understanding of the most important aspect of the practice of commercial lawyers The law is explained by reference to three stages in construction It distinguishes the preliminary stage in which context is established from the meaning and application stages of contract construction The approach provides insights both into the practical problems that lawyers face in particular in relation to admissibility of extrinsic evidence and the theoretical underpinnings of the subject The book also explains the relationship between intention and construction and discusses general and specific rules that determine the results of construction disputes Each chapter is introduced by statements of its objectives and the book includes simple definitions of key concepts as well as summaries of the complex principles which comprise the law of construction In illustrating construction principles and their application the exposition of the law draws on the author s knowledge of Australian contract law and the influence and role of the UNIDROIT principles CISG and the American Restatement Second Contracts

Enabling Flexibility in Process-Aware Information Systems Manfred Reichert, Barbara Weber, 2012-08-28 In today s dynamic business world the success of a company increasingly depends on its ability to react to changes in its environment in a quick and flexible way Companies have therefore identified process agility as a competitive advantage to address business trends like increasing product and service variability or faster time to market and to ensure business IT alignment Along this trend a new generation of information systems has emerged so called process aware information systems PAIS like workflow management systems case handling tools and service orchestration engines

With this book Reichert and Weber address these flexibility needs and provide an overview of PAIS with a strong focus on methods and technologies fostering flexibility for all phases of the process lifecycle i.e. modeling configuration execution and evolution. Their presentation is divided into six parts. Part I starts with an introduction of fundamental PAIS concepts and establishes the context of process flexibility in the light of practical scenarios. Part II focuses on flexibility support for pre-specified processes, the currently predominant paradigm in the field of business process management (BPM). Part III details flexibility support for loosely specified processes which only partially specify the process model at build time while decisions regarding the exact specification of certain model parts are deferred to the run time. Part IV deals with user and data driven processes which aim at a tight integration of processes and data and hence enable an increased flexibility compared to traditional PAIS. Part V introduces existing technologies and systems for the realization of a flexible PAIS. Finally, Part VI summarizes the main ideas of this book and gives an outlook on advanced flexibility issues. The book's target groups include researchers, PhD students and Master students in the field of information systems. After reading the book they will better understand PAIS flexibility aspects. To support the easy use as a textbook, a series of exercises is provided at the end of each chapter, and slides and further teaching material are available on the book's web site www.flexibleprocesses.com. Professionals specializing in business process management (BPM) who want to obtain a good understanding of flexibility challenges in BPM and state of the art solutions will also benefit from the presentations of open source as well as commercial process management systems and related practical scenarios.

Multi-Objective Optimization in Chemical Engineering Gade Pandu Rangaiah, Adrian Bonilla-Petriciolet, 2013-03-20. For reasons both financial and environmental, there is a perpetual need to optimize the design and operating conditions of industrial process systems in order to improve their performance, energy efficiency, profitability, safety, and reliability. However, with most chemical engineering application problems having many variables with complex inter-relationships, meeting these optimization objectives can be challenging. This is where Multi-Objective Optimization (MOO) is useful to find the optimal trade-offs among two or more conflicting objectives. This book provides an overview of the recent developments and applications of MOO for modeling, design, and operation of chemical, petrochemical, pharmaceutical, energy, and related processes. It then covers important theoretical and computational developments as well as specific applications such as metabolic reaction networks, chromatographic systems, CO₂ emissions targeting for petroleum refining units, eco-design of chemical processes, ethanol purification, and cumene process design. Multi-Objective Optimization in Chemical Engineering: Developments and Applications is an invaluable resource for researchers and graduate students in chemical engineering as well as industrial practitioners and engineers involved in process design, modeling, and optimization.
