[The Rise of Radio Astronomy in the Netherlands](#) Astrid Elbers, 2016-11-23 Radio astronomy was born during the Second World War but as this book explains the history of early Dutch radio astronomy is in several respects rather anomalous in comparison to the development of radio astronomy in other countries The author describes how these very differences led the Netherlands to become one of the world leaders in radio astronomy Dominated by the Leiden astronomer Jan Hendrik Oort the field embarked on an era of success and to this

day the country still holds a leading position To tell this story the book focuses on three key events in the period 1940 1970 namely the construction of the radio telescopes in Kootwijk 1948 in Dwingeloo 1956 and in Westerbork 1970 These projects show that Dutch radio astronomers must not be seen as merely scientists but also as strategic lobbyists networkers and organizers in a specific political and economic context It was in the process of planning designing and constructing these instruments that the interests of the astronomers industrial partners politicians and lobby groups merged to create today's existing research centers for radio astronomy *Organizations and Strategies in Astronomy* 7 Andre HECK, 2007-09-18 Astronomy is the most ancient science humans have practiced on Earth It is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of temperatures of density and masses of magnetic fields etc It is a science which is highly visible not only because stars and planets are accessible in the sky to the multitude but also because the telescopes themselves are easily distinguishable usually on top of scenic mountains and also because their cost usually represents a substantial proportion of the national budget and of the taxpayers' contribution to that budget As such astronomy cannot pass unnoticed It touches on the origins of matter of the Universe where we live on life and on our destiny It touches on philosophy as well as on religion Astronomy is the direct contact of humankind with its origins and the immensity of universal nature It is indeed a science of observation where experimentation is practically possible and which is ruled by mathematics physics chemistry statistical analysis and modelling while offering the largest number of verifications of the most advanced theories of fundamental physics such as general relativity and gravitation At the beginning of the 21st century astronomy is clearly a multidisciplinary activity touching on all aspects of science It is therefore logical that in the past and still now astronomy has attracted the most famous scientists be they pure observers mathematicians physicists biologists experimentalists and even politicians

**The Paraboloidal Reflector Antenna in Radio Astronomy and Communication** Jacob W. M.

Baars, 2007-07-16 Radio astronomers have developed techniques of calibration of large reflector antennas with radio astronomical methods but these have not been comprehensively described This text aims to fill this gap taking a practical approach to the characterisation of antennas All calculations and results in the form of tables and figures have been made with Mathematica by Wolfram Research The reader can use the procedures for the implementation of his own input data

*Frontiers of Astrophysics* Alan H. Bridle, James Justin Condon, Gareth C. Hunt, 2008 In celebration of its 50th anniversary the NRAO hosted a science symposium highlighting the most important questions that can be addressed by astronomers The universe is a unique laboratory yielding historical data on the creation of the universe the formation of the first stars and galaxies the production of the elements the assembly of molecules and the building blocks of life in interstellar space how and where planets form and possible changes in fundamental physical constants on cosmological time scales This laboratory contains black holes neutron stars and gravitational radiation for studying extreme gravity and extremely dense matter It is filled with the mysterious dark energy and dark matter that control the expansion and destiny of the universe and whose

nature is a critical unsolved problem for physics This symposium brought together leading scientists to address the most important questions in these areas the major contributions to astronomy enabled by NRAO instruments past present and future and to suggest future directions for research involving radio observations and techniques BOOK JACKET *But it was Fun* Felix J.
