Recombinant Urbanism Conceptual Modelling In Architecture Urban Design And City Theory:

Recombinant Urbanism David Grahame Shane, 2005-06-17 This book provides a simple but comprehensive framework for the emerging academic discipline of urban design from its origins in Europe and America to contemporary issues of imagery finance and marketing in an age of globalisation There is currently no contemporary textbook for urban design that includes a general history and theory of the subject Internationally urban design is more and more becoming a core subject taught in architecture schools The AIA US and the RIBA UK both require undergraduates and graduates to study the urban dimension of architectural design On a wider scale in Europe the EU is developing a common architectural curriculum which includes an urban component for under graduates The situation is similar in schools across Asia and Australia Aimed at both students and teachers this book provides a simple and accessible framework from the origins of urban design and the main techniques developed to deal with the design of fragments of cities to participatory planning processes codes imagery finance and marketing Finally it proposes an innovative vision of contemporary practice based on the work of leading actors and projects in the field This book is set to become the key textbook at undergraduate and graduate levels It is written in an accessible and direct tone and highly illustrated with many colour and black and white diagrams It includes a general history and theory of urban design and provides an up to date account of contemporary urban conditions Praise for Recombinant Urbanism Documents a major intellectual advance eagerly awaited by academics and practitioners all around the world should become a standard text for schools of architecture and urbanism Leon Van Schaik Innovation Professor of Architecture RMIT Australia both unique and instrumentally positive The book is the result of many years of research and writing and is a small masterpiece in urban studies It has already proved its worth in the teaching of urban studies at Columbia the AA the Bartlett School and Cooper Union to mention only a few of the universities where Dr Shane has had a powerful influence It is indeed one of the very best manuscripts I have read in the field in the last few years Anthony Vidler Professor and Dean Irwin S Chanin School of Architecture Cooper Union New York USA I can say without hesitation that I fully endorse Grahame s work the issues it covers are highly topical and such a book would indeed be widely read by architecture students urban designers and planners Colin Fournier Professor of Architecture again Shane has made important urban theories and thinking more widely available to an international student audience The legacy the book will have will be in convincing people that the design of cities matters not in the overbearing and over controlling sense of new urbanism but in reinforcing the multiple possibilities of contemporary life Brian McGrath Adjunct Associate Professor of Architecture Columbia University USA

Machine Learning and the City Silvio Carta, 2022-05-17 Machine Learning and the City Explore the applications of machine learning and artificial intelligence to the built environment Machine Learning and the City Applications in Architecture and Urban Design delivers a robust exploration of machine learning ML and artificial intelligence AI in the context of the built environment Relevant contributions from leading scholars in their respective fields describe the ideas and

techniques that underpin ML and AI how to begin using ML and AI in urban design and the likely impact of ML and AI on the future of city design and planning Each section couples theoretical and technical chapters authoritative references and concrete examples and projects that illustrate the efficacy and power of machine learning in urban design The book also includes An introduction to the probabilistic logic that underpins machine learning Comprehensive explorations of the applications of machine learning and artificial intelligence to urban environments Practical discussions of the consequences of applied machine learning and the future of urban design Perfect for designers approaching machine learning and AI for the first time Machine Learning and the City Applications in Architecture and Urban Design will also earn a place in the libraries of urban planners and engineers involved in urban design **Basics Landscape Architecture 01: Urban Design** Tim Waterman, Ed Wall, 2017-11-02 Basics Landscape Architecture 01 Urban Design seeks to define and describe the role played by landscape architecture in urban design an interdisciplinary practice that is concerned with defining the form of human settlements It provides a brief history and definition of urban design and the roles of the various professions involved Urban Design looks at the elements of urban form and the importance of contextual details from the scale of the city and its region to the importance of materials The text uses case studies to explore the philosophies and methodologies of urban design and to explain the importance of of urban design to landscape architecture and in turn the importance of landscape **Urban Maps** Richard Brook, Nick Dunn, 2016-12-05 This book concerns the city and the architecture to urban design devices that define the urban environment by their presence representation or interpretation. The texts offer an interdisciplinary discourse and critique of the complex systems artifacts interventions and evidences that can inform our understanding of urban territories on surfaces in the margins or within voids The diverse media of arts practices as well as commercial branding are used to explore narratives that reveal latent characteristics of urban situations that conventional architectural inquiry is unable to do The subjects covered are presented within a wider framework of urban theory into which are embedded case study examples that outline the practices processes and interpretations of each theme The chapters provide a contemporary reading of urban socio cultural conditions using mapping as a lens to explore and communicate the social phenomena and lived experiences of the dynamic and temporal city Mapping is developed as a form of critical instrumentality to expose record and contribute to the understanding of the singular essences of space place and networks by thematic cognitive and experiential modes of investigation Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today s urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of

environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto s Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines Studies in Temporal Urbanism Fabian Neuhaus, 2011-08-04 This book is very much about what promote urban resilience the name urban Tick literally says about the ticking of the urban the urban as we experience it everyday on the bus in the park or between buildings It is about the big orchestrated mass migration of commuters the seasonal blossoms of the trees along the walkway and the frequency of the stamping rubbish eater trucks It is also not to forget about climate infrastructure opening hours term times parking meters time tables growing shadows and moon light But most of all it is about how all this is experienced by citizens on a daily basis and how they navigate within this complex structure of patterns The content of this book is based on the content of the urbanTick blog between 2008 2010 One year blogging about this topic brought together a large collection of different aspects and thoughts It is not at all a conclusive view the opposite might be the case it is an exploratory work in progress while trying to capture as many facets of the topic as possible Incomplete Urbanism William Siew Wai Lim, 2012 Foreword by Leon van Schaik Incomplete Urbanism is a dynamic hybrid interactive concept which destabilizes the current architectural and urban theories and practices Its main characteristics are indeterminacy inconsistency and changeability which are particularly challenging in the context of the New World Order and the fast emerging global digital network It is a concept that can be effectively applied to any sizeable section of existing cities without the need for major readjustments and can be implemented at different rates in response to specific local conditions As for the word critical I use it deliberately in order to convey the essential need to think creatively and positively in a controversial contesting and social orientated manner about what we do as it will constructively influence the way we do things that impact our values and social environment [] With Design: Reinventing Design Modes Gerhard Bruyns, Huaxin Wei, 2022-11-05 This collection stems from the International Association of Societies of Design Research IASDR congress in 2021 promoting the research of design in its many fields of application Today's design finds itself at a critical moment where the conventional modes of doing thinking and application are increasingly challenged by the troubled ideology of globalisation climate change migration patterns and the rapid restructuring of locally driven manufacturing sectors The volume presents a selection of papers on state of the art design research work As rapid technological development has been pushing and breaking new ground in society the broad field of design is facing many unprecedented changes In combination

with the environmental cultural technological and crucially pandemic transitions design at large is called to fundamentally alter its modes of practice Beyond the conventional models of conducting research or developing solutions to wicked problems the recoupling of design with different modes should be seen as an expression to embrace other capacities of thinking criticisms and productions This selection of proceedings papers delivers the latest insights into design from a multitude of perspectives as reflected in the eight thematic modes of the congress i e social making business critical historical projective impact pandemic and alternative with design modes The book benefits design researchers from both academia and industry who are interested in the latest design research results as well as in innovative design research methods In presenting an interesting corpus of design case studies as well as studies of design impact this comprehensive collection is of relevance to design theorists and students as well as scholars in related fields seeking to understand how design plays a critical role in their respective domains **Big House Little City** Benedict Zucchi,2023-09-08 Shortlisted for the Architectural Book Awards 2024 Combining architectural and urban thinking in an unusual and engaging way this book presents an integrated approach to architectural theory and design Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture s relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered Explicit references to Alberti's house city phrase have been made by figures as diverse as the architects Louis Kahn Aldo Van Eyck Denys Lasdun and Niels Torp and novelist Italo Calvino But as the book shows thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects including Le Corbusier Frank Lloyd Wright Alvar Aalto Eliel Saarinen Bernard Rudofsky Hans Scharoun Leon Krier Fumihiko Maki Charles Correa and Team 10 In doing so the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity the Middle Ages Renaissance and 20th century The book explores buildings from across the globe including lesser known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy as well as more recent projects by Niels Torp Behnisch Architekten Sou Fujimoto Peter Barber and WOHA It concludes with practical case studies of residential health education and workplace projects from different countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made Chasing the City Joshua M Nason, Jeffrey S Nesbit, 2018-10-08 Historically many architects planners and urban designers solicit idealistic

depictions of a controllable urban environment made from highly regulated geometrical organizations and systematically defined processes Rather than working as urban designers who set out to control and implant external processes we shift our approach to that of urban detectives who set out to chase the city Charged with approaching the city more responsively we investigate what we do not know allowing the city to direct our work As urban detectives we have the ability to interrogate and respond to the elaborate patterns emerging from self generated internalized urban interactions Chasing the City asks what are the current design trends shaping how we first understand the cities of today to then produce informed decisions on the continuously undefined evolving city of tomorrow Intentionally the work here does not adhere to rudimentary notions of supposed singularities or rely upon past generations of idealistic utopian models Rather Chasing the City delineates current models of urban investigation that seek to respond to the nature of cities and develop heretofore urban strategies as concurrently negotiated future urbanism This edited volume provides a collection of innovative design research projects based on shared notions of Chasing the City through three bodies of strategic frameworks 1 Mapping 2 Resource and 3 Typology This structure ultimately allows readers as fellow urban detectives access to exploratory tools and methods of detection that accumulate from our environs both practical and projective in our chase of the city Handbook of Urban Mobilities Ole B. Jensen, Claus Lassen, Vincent Kaufmann, Malene Freudendal-Pedersen, Ida Sofie Gøtzsche Lange, 2020-05-18 This book offers the reader a comprehensive understanding and the multitude of methods utilized in the research of urban mobilities with cities and the urban as its pivotal axis It covers theories and concepts for scholars and researchers to understand observe and analyse the world of urban mobilities The Handbook of Urban Mobilities facilitates the understanding of urban mobilities within a historic conscience of societal transformation It explores key concepts and theories within the mobilities turn with a particular urban framework as well as the methods and tools at play when empirical urban mobilities research is undertaken This book also explores the urban mobilities practices related to commutes particular modes of moving the exploration of everyday life and embodied practices as they manifest themselves within urban mobilities and the themes of power conflict and social exclusion A discussion of urban planning public control and governance is also undertaken in the book wherein the themes of infrastructures technologies and design are duly considered With chapters written in an accessible style this handbook carries timely contributions within the contemporary state of the art of urban mobilities research It will thus be useful for academics and students of graduate programmes and post graduate studies within disciplines such as urban geography political science sociology anthropology urban planning traffic and transportation planning and architecture and urban design The Baltimore School of Urban Ecology J. Morgan Grove, Mary L. Cadenasso, Steward T. Pickett, Gary E. Machlis, William R. Burch, 2015-01-01 The first urban century in history has arrived a majority of the world's population now resides in cities and their surrounding suburbs Urban expansion marches on and the planning and design of future cities requires attention to such diverse issues as human migration public

health economic restructuring water supply climate and sea level change and much more This important book draws on two decades of pioneering social and ecological studies in Baltimore to propose a new way to think about cities and their social political and ecological complexity Readers will gain fresh perspectives on how to study build and manage cities in innovative and sustainable ways Science for the Sustainable City Steward T. A. Pickett, Mary L. Cadenasso, J. Morgan Grove, 2019-10-22 A presentation of key findings and insights from over two decades of research education and community engagement in the acclaimed Baltimore Ecosystem Study In a world of more than seven billion people who mostly reside in cities and towns the Baltimore Ecosystem Study is recognized as a pioneer in modern urban social ecological science After two decades of research education and community engagement there are insights to share generalizations to examine and research needs to highlight This timely volume synthesizes the key findings melds the perspectives of different disciplines and celebrates the benefits of interacting with diverse communities and institutions in improving Baltimore's ecology These widely applicable insights from Baltimore contribute to our understanding the ecology of other cities provide a comparison for the global process of urbanization and inform establishment of urban ecological research elsewhere Comprehensive interdisciplinary and highly original it gives voice to the wide array of specialists who have contributed to this living urban laboratory Shopping Malls and Public Space in Modern China Nicholas Jewell, 2016-03-03 China s rise as an economic superpower has been inescapable Statistical hyperbole has been accompanied by a plethora of highly publicized architectural forms that brand the regeneration of its increasingly globalized urban centres Despite the sizeable body of literature that has accompanied China's modernization the essence and trajectory of its contemporary cityscape remains difficult to grasp This volume addresses a less explored aspect of China's urban rejuvenation the prominence of the shopping mall as a keystone of its public spaces Here the presence of the built form most representative of Western capitalism's excess is one that makes explicit the tensions between China's Communist state and its ascent within the free market This book examines how these interrelationships are manifested in the culturally hybrid built form of the shopping mall and its role in contesting the public space of the modern Chinese city By viewing these interrelationships as collisions of global and local narratives a more nuanced understanding of the shopping mall typology is explored Much architectural criticism has failed to address the levels of meaning implicit within the shopping mall yet it is a building type whose public popularity has guaranteed its endurance Consequently if architecture is to remain a relevant social art a more holistic understanding of this phenomenon will be indispensable to the process of adapting to globalizing forces This examination of Chinese shopping malls offers a timely and relevant case study of what is happening in all our cities today Heterotopia and the City Michiel Dehaene, Lieven De Cauter, 2008-05-15 Heterotopia literally meaning other place is a rich concept in urban design that describes a space that is on the margins of ordered or civil society and one that possesses multiple fragmented or even incompatible meanings The term has had an impact on architectural and urban theory since it was coined by Foucault in the late 1960s but it has

remained a source of confusion and debate since Heterotopia and the City seeks to clarify this concept and investigates the heterotopias which exist throughout our contemporary world in museums theme parks malls holiday resorts gated communities wellness hotels and festival markets With theoretical contributions on the concept of heterotopia including a new translation of Foucault's influential 1967 text Of Other Space and essays by well known scholars the book comprises a series of critical case studies from Beaubourg to Bilbao which probe a range of post urban transformations and which redirect the debate on the privatization of public space Wastelands and terrains vagues are studied in detail in a section on urban activism and transgression and the reader gets a glimpse of the extremes of our dualized postcivil condition through case studies on Jakarta Dubai and Kinshasa Heterotopia and the City provides a collective effort to reposition heterotopia as a crucial concept for contemporary urban theory. The book will be of interest to all those wishing to understand the city in the emerging postcivil society and post historical era Planners architects cultural theorists urbanists and academics will find this a valuable contribution to current critical argument **The EcoEdge** Esther Charlesworth, Rob Adams, 2013-09-13 Presenting diverse case studies of contemporary sustainable urban practice from Europe Africa India South America the USA and Australia this book offers the reader a fantastic wealth of practical material from a range of internationally renowned authors Each practical case study has addressed issues and then offered solutions to implement sustainable cities across a range of urban scales and cultures Urgent design challenges explored include population density recreating infrastructure that supports carbon neutral or low carbon emission intensive urban activities and retrofitting for sustainability Highly illustrated thematically focused and with superb global coverage this book presents a multi voiced and yet highly cohesive reference for anyone interested in green issues in urban design and architecture Sustainable Urban Development and Globalization Agostino Petrillo, Paola Bellaviti, 2017-11-24 This book equips readers with a deeper understanding of the challenges posed by radical socioeconomic environmental and cultural changes due to globalization and describes effective sustainable solutions to these challenges The focus is especially on the rapid urbanization processes in countries of the Global South which are giving rise to dramatic new problems of spatial and social inequality and difficult environmental challenges in relation to climate change Readers will gain skills and knowledge that will help them to develop an integrated multidisciplinary approach to planning design and management of urban settlements and territories in contexts with a high level of social economic territorial and landscape vulnerability. The coverage includes for example strategies to promote social inclusion improve housing quality ensure adequate education protect cultural heritage enhance risk management and address issues in the food energy water nexus Among the authors are leading experts from the Polytechnic University of Milan where a multidisciplinary set of studies and research projects in the field have been undertaken in recent years

Understanding Personal Mobilities Aharon Kellerman, 2023-10-06 In this thought provoking book Aharon Kellerman presents a wide ranging understanding of personal mobilities the mobilities which individuals initiate direct and operate

physically and virtually and which constitute an expression of personal autonomy He readdresses existing concepts and knowledge as well as assessing novel and emerging technologies for self driven mobilities The Interstitial Spaces of **Urban Sprawl** Cristian A. Silva, 2022-01-25 This book proposes the idea of interstitial space as a theoretical framework to describe and understand the implications of in between lands in urban studies and their profound transformative effects in cities and their urban character The analysis of the interstitial spaces is structured into four themes the conceptual grounds of interstitial spaces the nature of interstices the geographical scale of interstices and the relationality of interstices The empirical section of the book introduces seven cases that illustrate the varied nature of interstitiality to finally discuss its implications in the broader field of urban studies Reflections upon further lines of enquiry and theories of urbanisation urban sprawl and cities are highlighted in the conclusion chapter This is the ideal text for scholars of urban planning strategic spatial planning landscape planning urban design architecture and other cognate disciplines as well as advanced students in these fields Urban Sustainability Through Environmental Design Kevin Thwaites, Sergio Porta, Ombretta Romice, Mark Greaves, 2007-12-06 What can architects landscape architects and urban designers do to make urban open spaces streets and squares more responsive lively and safe Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments. The book calls into question the capability of quick fix development solutions to provide the establishment of fixed communities and suggests a more time conscious and evolutionary approach This is the first significant book to draw together a pan European view on sustainable urban design with a specific focus on social sustainability It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions themselves With its practical approach and wide ranging discussion this book will appeal to all those involved in producing communities and spaces for sustainable living from students to academics through to decision makers and professional leaders
