Windover, 2019-06-25 Scholarly interest in Art Deco has grown rapidly over the past fifty years spanning different academic disciplines This volume provides a guide to the current state of the field of Art Deco research by highlighting past accomplishments and promising new directions Chapters are presented in five sections based on key concepts migration public culture fashion politics and Art Deco's afterlife in heritage restoration and new media The book provides a range of perspectives on and approaches to these issues as well as to the concept of Art Deco itself It highlights the slipperiness of Art Deco yet points to its potential to shed new light on the complexities of modernity Embedded Computing Systems:

Applications, Optimization, and Advanced Design Khalgui, Mohamed, Mosbahi, Olfa, Valentini, Antonio, 2013-04-30 Embedded computing systems play an important and complex role in the functionality of electronic devices With our daily routines becoming more reliant on electronics for personal and professional use the understanding of these computing systems is crucial Embedded Computing Systems Applications Optimization and Advanced Design brings together theoretical and technical concepts of intelligent embedded control systems and their use in hardware and software architectures By highlighting formal modeling execution models and optimal implementations this reference source is essential for experts researchers and technical supporters in the industry and academia Built-in Fault-Tolerant Computing Paradigm for

Resilient Large-Scale Chip Design Xiaowei Li, Guihai Yan, Cheng Liu, 2023-03-01 With the end of Dennard scaling and Moore's law IC chips especially large scale ones now face more reliability challenges and reliability has become one of the mainstays of VLSI designs In this context this book presents a built-in on-chip fault tolerant computing paradigm that seeks to combine fault detection fault diagnosis and error recovery in large scale VLSI design in a unified manner so as to minimize resource overhead and performance penalties Following this computing paradigm we propose a holistic solution based on three key components self test self diagnosis and self repair or 3S for short We then explore the use of 3S for general IC designs general purpose processors network on-chip NoC and deep learning accelerators and present prototypes to demonstrate how 3S responds to in-field silicon degradation and recovery under various runtime faults caused by aging process variations or radical particles Moreover we demonstrate that 3S not only offers a powerful backbone for various on-chip fault tolerant designs and implementations but also has far-reaching implications such as maintaining graceful

performance degradation mitigating the impact of verification blind spots and improving chip yield This book is the outcome of extensive fault tolerant computing research pursued at the State Key Lab of Processors Institute of Computing Technology Chinese Academy of Sciences over the past decade The proposed built in on chip fault tolerant computing paradigm has been verified in a broad range of scenarios from small processors in satellite computers to large processors in HPCs Hopefully it will provide an alternative yet effective solution to the growing reliability challenges for large scale VLSI designs On-Line Testing for VLSI Michael Nicolaidis,Yervant Zorian,Dhiraj Pradhan,2013-03-09 Test functions fault detection diagnosis error correction repair etc that are applied concurrently while the system continues its intended function are defined as on line testing In its expanded scope on line testing includes the design of concurrent error checking subsystems that can be themselves self checking fail safe systems that continue to function correctly even after an error occurs reliability monitoring and self test and fault tolerant designs On Line Testing for VLSI contains a selected set of articles that discuss many of the modern aspects of on line testing as faced today The contributions are largely derived from recent IEEE International On Line Testing Workshops Guest editors Michael Nicolaidis Yervant Zorian and Dhiraj Pradhan organized the articles into six chapters In the first chapter the editors introduce a large number of approaches with an expanded bibliography in which some references date back to the sixties On Line Testing for VLSI is an edited volume of original research comprising invited contributions by leading researchers *Functional Verification of Dynamically Reconfigurable FPGA-based Systems* Lingkan Gong,Oliver Diessel,2014-10-08 This book analyzes the challenges in verifying Dynamically Reconfigurable Systems DRS with respect to the user design and the physical implementation of such systems The authors describe the use of a simulation only layer to emulate the behavior of target FPGAs and accurately model the characteristic features of reconfiguration Readers are enabled with this simulation only layer to maintain verification productivity by abstracting away the physical details of the FPGA fabric Two implementations of the simulation only layer are included Extended Re Channel is a System C library that can be used to check DRS designs at a high level ReSim is a library to support RTL simulation of a DRS reconfiguring both its logic and state Through a number of case studies the authors demonstrate how their approach integrates seamlessly with existing mainstream DRS design flows and with well established verification methodologies such as top down modeling and coverage driven verification **Encyclopedia of Software Engineering Three-Volume Set (Print)** Phillip A. Software Engineering for Self-Adaptive Systems Betty H. C. Cheng,Rogério de Lemos,Paola Inverardi,Jeff Magee,2009-06-10 Although the self adaptability of systems has been studied in a wide range of disciplines from biology to robotics only recently has the software engineering community recognized its key role in enabling the development of future software systems that are able to self adapt to changes that may occur in the system its requirements or the environment in which it is deployed The 12 carefully reviewed papers included in this state of the art survey originate from the International Seminar on Software Engineering for Self Adaptive Systems held in Dagstuhl Castle Germany in January 2008 They examine the current state of the art in the field describing a wide range of approaches coming from different strands of software engineering and present future challenges facing this ever resurgent and challenging field of research Also included in this book is an invited roadmap paper on the research challenges facing self adaptive systems

within the area of software engineering based on discussions at the Dagstuhl Seminar and put together by several of its participants The papers have been divided into topical sections on architecture based self adaptation context aware and model driven self adaptation and self healing These are preceded by three research roadmap papers *Perspectives on Research Assessment in Architecture, Music and the Arts* Fredrik Nilsson, Halina Dunin-Woyseth, Nel Janssens, 2017-02-03 Research in the creative fields of architecture design music and the arts has experienced dynamic development for over two decades The research in these practice and arts based fields has become increasingly mature but has also led to various discussions on what constitutes doctoral proficiency in these fields The term doctorateness is often used when referring to the assessment of the production of doctoral research and the research competence of research students but in architecture and the arts the concept of doctorateness has not yet attained a clearly articulated definition The assessment of quality has been practiced by way of supervising mentoring and the evaluation of dissertations but much less discussed This book offers perspectives on how to qualify and assess research in architecture music and the arts It creates a broader arena for discussion on doctorateness by establishing a framework for its application to creative fields The book is grouped into three sections and includes contributions from international experts in the various fields working in Australia Belgium Brazil Canada Norway Sweden Switzerland Spain the Netherlands and the UK The first section offers general frameworks for further conceptualising doctorateness in the fields in question It is followed by a section that describes and discusses various experiences concerns and visions on the production and assessment of doctoral research reporting from doctoral programmes in different stages of development The third section includes future oriented perspectives on knowledge building processes and asks how the ongoing profound changes in academia could influence the concept of quality in both doctoral process and product The book presents different perspectives on research assessment practices and developments of relevant criteria in the practice based and creative fields of architecture and the arts The contributions propose ways of framing this issue conceptually show the need for awareness of the specific context and tradition programmes develop and give proposals for various potential trajectories for the future *Small and Medium Enterprises: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2013-04-30 This book provides a comprehensive collection of research on current technological developments and organizational perspectives on the scale of small and medium enterprises Provided by publisher *Good Practices / Best Practices: A Manifesto for Academic Design Education and Research on Creative Practice* Carl Bourgeois, Karen Maex, Kris Scheerlinck, Yves Schoonjans, Margarita Greene, Chris Van Keer, Liesbeth Huybrechts, Hilde Heynen, Richard Blythe, Johan Verbeke, Frank van der Hoeven, Guy Van Kerckhoven, 2012-11-12 Scientific and Technical Aerospace Reports , 1995
