**Fighting Market Failure** Maria Cristina Marcuzzo, 2012-03-12 This collection brings together fifteen essays published between 1994 and 2008 which all look into the contribution of a remarkable group of economists known as the Cambridge school or the Cambridge Keynesians The people involved are better defined as a group rather than a school to denote not adherence to a common body of doctrine but rather the idea of both cohesion and sharing This collection focuses on Keynes Kahn J Robinson and Sraffa who all shared in the physical space and lifestyle of the University of Cambridge The bond between them was intellectual partnership a recognised common ground dialogue and acceptance of criticism Some of the essays in this collection address the content as well as the method and style of the type of economics associated with the Cambridge tradition at the very core of which those economists stand The first section opens with a chapter presenting the group within the physical and metaphorical place which was Cambridge and the remaining five chapters centre on the life and work of each economist The second section has papers looking at them in pairs as it were and revolves around the theme of their collaboration in various intellectual achievements In particular the opening piece makes the rather bold point that the road to the General Theory was not a solitary path In other two papers much is said of Sraffa's intellectual isolation in Cambridge and the difficulty of communication with Joan Robinson The chapters in the third section take up aspects of their theories and approaches which justify the importance and relevance of the Cambridge tradition in economics This book should be of interest to students and researchers within the history of economics and economic thought particularly those focussing on the Cambridge or Keynesian traditions

**Monopolistic Competition and Macroeconomic Theory** Robert M. Solow, 1998-11-28 Much of today's conventional macroeconomic theory presumes that markets for goods approach the state of perfect competition Monopolistic Competition and Macroeconomic Theory assumes that markets are imperfect so that sellers have some power over price and must therefore form quantity expectations about the location of the firm's demand curve The question is then about the macroeconomic

implications of imperfect competition in goods markets The first chapter is a brief survey of ideas proposed in economics including multiple equilibria The second chapter describes a particular micro based macro model that allows several families of equilibria The third chapter shows how a standard locational model can be used to describe a sample macroeconomy when firms have close rivals In this volume derived from his Federico Caffè Lecture Nobel Laureate Robert Solow shows that there are simple and tractable micro based models that offer the possibility of a richer and more intuitive macroeconomics

*Economic Simulations in Swarm: Agent-Based Modelling and Object Oriented Programming* Francesco Luna, Benedikt Stefansson, 2012-12-06 Computer simulations of economic systems are slowly gaining ground within the economic profession However such a process is hindered by a lack of communication among researchers who do not share a common language For its object oriented structure and its versatility Swarm has the necessary characteristics to become a credible universal language of agent based simulations *Economic Simulations in Swarm* collects a series of original articles in such domains as macro and micro economics industrial organization monetary theory and finance all linked by a common denominator the use of the Swarm simulation platform Swarm a standard set of program libraries allows users to construct simulations where a collection of heterogeneous independent agents or elements interact through discrete events This volume offers the first extensive tutorial to the use of these software libraries developed at the Santa Fe Institute as part of the ongoing research into complexity The editors conceived the idea of this book while visiting the Santa Fe Institute as members of the Working Group on Adaptive and Computable Economics Francesco Luna is a specialist in Computable Economics and Benedikt Stefansson is an active contributor to the Swarm community

*Nonlinear Evolution of Spatial Economic Systems* Peter Nijkamp, Aura Reggiani, 2012-12-06 Is our world more dynamic than it used to be in the past Have phenomena in the social science field become unpredictable Are chaotic events nowadays occurring more frequently than in the past Such questions are often raised in popular debates on nonlinear evolution and self organizing systems At the same time many scientists are also raising various intriguing methodological issues Is it possible to separate deterministic chaos from random disturbances if their trajectories are almost similar Is prediction still possible in a world of chaos Poincaré Is it possible to distinguish specification errors from measurement errors in a nonlinear dynamic model Is evolution a random process The list of such questions can easily be extended with dozens of others But despite the myriad of questions on problems of nonlinear evolution one common trait is evident in both the natural and the social sciences we are still groping in the dark in areas which are par excellence promising hunting grounds for exploratory and exploratory research viz structural grounds in an uncertain nonlinear world The present book aims at offering a collection of refreshing contributions to the above research issues by focusing attention in particular on nonlinear dynamic evolution in space at the Netherlands Institute for Advanced Study NIAS in Wassenaar the Netherlands The Institute has to be thanked for its hospitality and support reflected inter alia in a workshop at which several of the papers included in this book were discussed

Davis, 2012-12-06 Interest in John Maynard Keynes's economic political and philosophical thinking has undergone a tremendous revival in the last decade The essays and comments collected in this volume were written on a set of themes representative of the current state of interpretation of Keynes's thinking Some of the topics investigated have received much attention in the past and some are of more recent interest In the former category are topics on standard issues in the interpretation of Keynes's economics the transition in Keynes's thinking from the *The Treatise on Money* to *The General Theory* the nature of the argument in *The General Theory* and Keynes's economic policy views The latter category introduces themes of a wider nature and includes two papers on Keynes's vision and one on Keynes's philosophical thinking The strategy adopted in the selection of topics was to review the debates over Keynes's economics from fresh perspectives and then go on to supply discussions of broader issues concerning the nature of Keynes as a thinker This collection as a whole adds to our general understanding of Keynes's work and contributes to the current revival of interest in Keynes
