Transactions on High-Performance Embedded Architectures and Compilers II Per Stenström,David

Whalley,2009-04-22 Transactions on HiPEAC aims at the timely dissemination of research contributions in computer architecture and compilation methods for high performance embedded computer systems Recognizing the convergence of embedded and general purpose computer systems this journal publishes original research on systems targeted at specific computing tasks as well as systems with broad application bases The scope of the journal therefore covers all aspects of computer architecture code generation and compiler optimization methods of interest to researchers and practitioners designing future embedded systems This second issue contains 15 papers carefully reviewed and selected out of 31 submissions and is divided into two sections The first section contains extended versions of the top five papers from the 2nd International Conference on High Performance Embedded Architectures and Compilers HiPEAC 2007 held in Ghent Belgium in January 2007 The second section consists of ten papers covering topics such as microarchitecture memory systems code generation and performance modeling *Market-based Control* Scott H. Clearwater,1996 Market Based Control is a paradigm for controlling complex systems that would otherwise be very difficult to control maintain or expand The purpose of this volume is to illustrate the utility of market based control through a series of papers focusing on different applications This volume for the first time brings together the research from a wide range of fields all using a market based conceptual framework The features of markets that have provided motivation for these works include decentralization interacting agents and some notion of a resource that needs to be allocated The papers span a range including theoretical considerations simulations and implementations Record of Proceedings, the 22nd Annual SIMULATION Symposium Alan H. Rutan,1998
Record of Proceedings ,1984 Simulation digest ,1989 Log Data Acquisition and Quality Control Philippe P. Theys,1999 While the first well logs recorded seventy years ago had no provision for data quality control the development of increasingly sophisticated logging techniques has led to the introduction of a large number of tests to validate acquired data Log quality can be assured by stringent control of depth calibrations signal processing and operating procedures This work gives a thorough description of these features The meaningful interpretation of well logs depends on valid input An understanding of log acquisition and the performance of rigorous quality checks are the prerequisites for an accurate evaluation of a formation These elements also enable log users to make decisions based on calculated risks The book is primarily written for earth science specialists who use log data It also addresses the needs of logging engineers who seek a better understanding of the log acquisition process Exercises and their solutions are scattered in the book to complement practical chapters Contents I Premises 1 Introduction 2 Evaluation of hydrocarbon volume 3 Data collection and decision making 4 Elements of metrology I error analysis 5 Elements of metrology II volume considerations 6 Elements of metrology

and Applications Vojin G. Oklobdzija, 2017-12-19 New design architectures in computer systems have surpassed industry expectations Limits which were once thought of as fundamental have now been broken Digital Systems and Applications details these innovations in systems design as well as cutting edge applications that are emerging to take advantage of the field's increasingly sophisticated capabilities This book features new chapters on parallelizing iterative heuristics stream and wireless processors and lightweight embedded systems This fundamental text Provides a clear focus on computer systems architecture and applications Takes a top level view of system organization before moving on to architectural and organizational concepts such as superscalar and vector processor VLIW architecture as well as new trends in multithreading and multiprocessing includes an entire section dedicated to embedded systems and their applications Discusses topics such as digital signal processing applications circuit implementation aspects parallel I/O algorithms and operating systems Concludes with a look at new and future directions in computing Features articles that describe diverse aspects of computer usage and potentials for use Details implementation and performance enhancing techniques such as branch prediction register renaming and virtual memory Includes a section on new directions in computing and their penetration into many new fields and aspects of our daily lives **Conference Record** , 1991 *Proceedings of the Fifth International Symposium on Magnetic Materials, Processes, and Devices* Lubomyr Taras Romankiw, 1999 **Data Science and Simulation in**

Transportation Research Janssens, Davy, Yasar, Ansar-Ul-Haque, Knapen, Luk, 2013-12-31 Given its effective techniques and theories from various sources and fields data science is playing a vital role in transportation research and the consequences of the inevitable switch to electronic vehicles This fundamental insight provides a step towards the solution of this important

challenge Data Science and Simulation in Transportation Research highlights entirely new and detailed spatial temporal micro simulation methodologies for human mobility and the emerging dynamics of our society Bringing together novel ideas grounded in big data from various data mining and transportation science sources this book is an essential tool for professionals students and researchers in the fields of transportation research and data mining

The 29th Annual Simulation Symposium IEEE,1996-04 Papers from the April 1996 symposium address traditional simulation topics in discrete event continuous digital and analog simulation and explore areas of distributed systems network modeling and simulation as well as advances in simulation methodology and practices Topics include parallel a

Modular Multilevel Converter Modelling and Simulation for HVDC Systems Davide del Giudice,Federico Bizzarri,Daniele Linaro,Angelo Maurizio Brambilla,2022-10-21 This book provides a comprehensive review of the models and approaches that can be employed to simulate modular multilevel converters MMCs Each solution is described in terms of operating principle fields of applicability advantages and limitations In addition this work proposes a novel and efficient simulation approach for MMCs based on sub circuit isomorphism This technique which has its roots in the electronics fields can be profitably exploited to simulate MMCs regardless of the model used to describe its sub modules including the most accurate ones Lastly this book considers a well known high voltage direct current HVDC benchmark system consisting of two MMCs After describing the implementation details of each benchmark component simulation results in several scenarios ranging from normal operating conditions to faults in the AC and DC grid are included to validate the proposed approach and showcase its key features Due to its educational content this book constitutes a useful guide for PhD students and researchers interested in the topic of MMCs and their simulation It also serves as a starting platform for junior electrical engineers who work in the field of power electronic converters for HVDC systems

Intelligent and Knowledge-Based Computing for Business and Organizational Advancements Sasaki, Hideyasu,2012-05-31 As organizations businesses and other institutions work to move forward during a new era of ubiquitous modern technology new computing and technology implementation strategies are necessary to harness the shared knowledge of individuals to advance their organizations as a whole Intelligent and Knowledge Based Computing for Business and Organizational Advancements examines the emerging computing paradigm of Collective Intelligence CI The global contributions contained in this publication will prove to be essential to both researchers and practitioners in the computer and information science communities as these populations move toward a new period of fully technology integrated business

Built-in Fault-Tolerant Computing Paradigm for Resilient Large-Scale Chip Design Xiaowei Li,Guihai Yan,Cheng Liu,2023-03-01 With the end of Dennard scaling and Moore s law IC chips especially large scale ones now face more reliability challenges and reliability has become one of the mainstay merits of VLSI designs In this context this book presents a built in on chip fault tolerant computing paradigm that seeks to combine fault detection fault diagnosis and error recovery in large scale VLSI design in a unified manner so as to minimize resource overhead and

performance penalties Following this computing paradigm we propose a holistic solution based on three key components self test self diagnosis and self repair or 3S for short We then explore the use of 3S for general IC designs general purpose processors network on chip NoC and deep learning accelerators and present prototypes to demonstrate how 3S responds to in field silicon degradation and recovery under various runtime faults caused by aging process variations or radical particles Moreover we demonstrate that 3S not only offers a powerful backbone for various on chip fault tolerant designs and implementations but also has farther reaching implications such as maintaining graceful performance degradation mitigating the impact of verification blind spots and improving chip yield This book is the outcome of extensive fault tolerant computing research pursued at the State Key Lab of Processors Institute of Computing Technology Chinese Academy of Sciences over the past decade The proposed built in on chip fault tolerant computing paradigm has been verified in a broad range of scenarios from small processors in satellite computers to large processors in HPCs Hopefully it will provide an alternative yet effective solution to the growing reliability challenges for large scale VLSI designs Record of Proceedings ,2002

Embedded Computing Joseph A. Fisher, Paolo Faraboschi, Cliff Young, 2005-01-19 The fact that there are more embedded computers than general purpose computers and that we are impacted by hundreds of them every day is no longer news What is news is that their increasing performance requirements complexity and capabilities demand a new approach to their design Fisher Faraboschi and Young describe a new age of embedded computing design in which the processor is central making the approach radically distinct from contemporary practices of embedded systems design They demonstrate why it is essential to take a computing centric and system design approach to the traditional elements of nonprogrammable components peripherals interconnects and buses These elements must be unified in a system design with high performance processor architectures microarchitectures and compilers and with the compilation tools debuggers and simulators needed for application development In this landmark text the authors apply their expertise in highly interdisciplinary hardware software development and VLIW processors to illustrate this change in embedded computing VLIW architectures have long been a popular choice in embedded systems design and while VLIW is a running theme throughout the book embedded computing is the core topic Embedded Computing examines both in a book filled with fact and opinion based on the authors many years of R D experience Complemented by a unique professional quality embedded tool chain on the authors website <http://www.vliw.org/book> Combines technical depth with real world experience Comprehensively explains the differences between general purpose computing systems and embedded systems at the hardware software tools and operating system levels Uses concrete examples to explain and motivate the trade offs Stochastic Modeling and Geostatistics Timothy C.
