Recovery And Management Of Neuropsychological Impairments:

Recovery and Management of Neuropsychological Impairments Edgar Miller, 1995 **Recovery and Management of Neuropsychological Impairments** Edgar Miller, 1984 **Neurobehavioral Recovery from Head Injury** Harvey S. Levin, 1987 This volume will repay the reader with a greatly enhanced understanding of the challenge facing head injured patients when they try to return to society *The Lancet* **Communication Disorders Following Traumatic Brain Injury** Skye McDonald, Chris Code, Leanne Togher, 2016-05-06 There are very few books available which are concerned with the unique communication problems that can come with traumatic brain injury TBI In recent years there has emerged a realisation that these difficulties in communication are closely tied to the cognitive behavioural and social problems observed following traumatic brain injury This is changing the way people with TBI are assessed and is generating new approaches to rehabilitation This volume will be of interest to psychologists speech pathologists and therapists and linguists Clinicians and researchers working with people with traumatic brain injury and their students will find it a comprehensive source of contemporary approaches to characterising the communication problems of people with TBI and for planning rehabilitation **Brain Injury and Recovery** C. Robert Almli, Stanley Finger, T.E. LeVere, Donald G. Stein, 2012-12-06 The idea for the present volume grew from discussions that the four of us had among ourselves and with our colleagues at recent scientific meetings All of us were impressed by the wealth of empirical data that was being generated by investigators interested in brain damage and recovery from both behavioral and biological orientations Nevertheless we were concerned about the relative paucity of attempts to evaluate the data provided by new technologies in more than a narrow context or to present new theories or reexamine time honored ideas in the light of new findings We recognized that science is guided by new technologies by hard data and by theories and ideas Yet we were forced to conclude that although investigators were often anxious to publicize new methods and empirical findings the same could not be said about broad hypotheses underlying concepts or inferences and speculations that extended beyond the empirical data Not only were many scientists not formally discussing the broad implications of their data but when stimulating ideas were presented they were more likely to be heard in the halls or over a meal than in organized sessions at scientific meetings

Developmental-Behavioral Disorders Marvin I. Gottlieb, John E. Williams, 2013-11-11 We are most pleased to present Volume 3 of *Developmental Behavioral Disorders Selected Topics* designed to serve as a companion for standard reference textbooks that address cogent issues in developmental pediatrics Periodic publications such as *Selected Topics* and theme related articles as well as continuing education programs attempt to supplement in a timely fashion the rapidly changing knowledge base in developmental behavioral pediatrics These media are important as forums for enhancing the quality of clinical practice teaching skills and research activities The need is critical for periodically disseminating and updating information about issues in developmental medicine in as much as this field of study continues to expand at a meteoric pace

During the past several decades developmental medicine has been recognized as a defined subspecialty in pediatrics. The spectrum of problems encompassed by this discipline is relatively broad and at times clinically overwhelming. The ultimate goal of preventing delays, disorders and/or dysfunctions from becoming chronic handicapping conditions has by volume per se created clinical dilemmas for pediatric health care providers. There are numerous facets of providing efficient and effective care which in the field of developmental behavioral pediatrics are often exaggerated impediments to the delivery of services by primary health care specialists. e.g. time, clinical skills, need for interdisciplinary management, medical, legal responsibilities, financial reimbursements. These issues as well as clinical problems are still very much part of the information base to be disseminated to concerned professionals.

Handbook of Head Trauma Charles J. Long, Leslie K. Ross, 2013-06-29 Providing a thorough collection of information regarding clinical aspects of head injury from acute care to recovery, this treatise interrelates a variety of neural specialties and broadens the rehabilitation process to include the family.

The Handbook of Clinical Neuropsychology Jennifer Gurd, Udo Kischka, John Marshall, 2012-01-12 Clinical neuropsychology remains one of the fastest growing specialties within clinical psychology, neurology, and the psychiatric disciplines. This second edition provides a practical guide for those interested in the professional application of neuropsychological approaches and techniques in clinical practice.

Handbook of Health and Rehabilitation Psychology Anthony J. Goreczny, 2013-11-11 Despite medical technological advances, the major killers with which we must currently contend have remained essentially the same for the past few decades. Stroke, cancer, and heart disease together account for the vast majority of deaths in the United States. In addition, due to improved medical care, many Americans who would previously have died now survive these disorders, necessitating that they receive appropriate rehabilitation efforts. One result of our own medical advances is that we must now accept the high costs associated with providing quality care to individuals who develop one of these problems, and we must avail ourselves to assist afflicted individuals and families. Despite the relative stability of causes of death and disability, the health care field is currently experiencing tremendous pressures both from professionals within the field who desire more and better technology than is currently available, and from the public and other payers of health care, e.g. insurance companies who seek an end to increasing health care costs. These pressures, along with an increased emphasis on providing evidence of cost effectiveness and quality assurance, are substantially changing the way that health care professionals perform their jobs.

Research Focus on Cognitive Disorders Valerie N. Plishe, 2007 Cognitive disorders are defined as those in which a limitation of cognitive functioning is the main feature. They include amnesic disorders, Huntington's disease, and mental retardation, dementia, delirium, aphasia, and cognitive disorders not otherwise specified. This book brings presents leading researchers from throughout the world.

Neuropsychiatry Randolph B. Schiffer, Stephen M. Rao, Barry S. Fogel, 2003 This thoroughly revised Second Edition builds on the success of the first as the definitive text for neuropsychiatry. The book is divided into three sections, with the third on syndromes and

disorders Emphasis on treatment is provided throughout the text and is DSM IV compatible Coverage includes neurobehavioral disorders selection and interpretation of neurodiagnostic procedures and the full spectrum of therapies New to this edition are eight chapters and the incorporation of psychopharmacology into specific disease chapters Compatibility BlackBerry R OS 4 1 or Higher iPhone iPod Touch 2 0 or Higher Palm OS 3 5 or higher Palm Pre Classic Symbian S60 3rd edition Nokia Windows Mobile TM Pocket PC all versions Windows Mobile Smartphone Windows 98SE 2000 ME XP Vista Tablet PC

Cognitive Retraining Using Microcomputers Veronica A. Bradley, John L. Welch, Clive E. Skilbeck, 1993 The last decade has seen considerable development in the field of neuropsychological rehabilitation following brain damage and the use of computerized methods has attracted attention and stimulated controversy This practically oriented text reviews representative examples from the literature relating to the training of cognitive systems with the emphasis on studies describing the use of computerized methods The topic is discussed in context and the contents include sections on cognitive change in neurological disorders assessment techniques the interaction between cognition and behaviour and the advantages and disadvantages of the use of microcomputers The authors describe the evaluation of a computerized cognitive retraining programme run at the Regional Neurological Centre in Newcastle upon Tyne and draw on their experience of running such programmes to give practical guidance to those wishing to set up cognitive retraining programmes

Recovery from Brain Damage F.D. Rose, D.A. Johnson, 2012-12-06 The present volume is based upon the invited review lectures delivered to the European Brain and Behaviour Society's Workshop on Recovery of Function Following Brain Damage held at Goldsmiths College University of London in April 1991 Coming exactly ten years after the Society's first meeting on this subject held at Erasmus University Rotterdam a major objective of the Workshop was to review progress in the intervening years This task was begun by Professor D G Stein in his opening presentation Looking ahead to possible developments in recovery research in the next decade was the subject of Professor B Kolb's closing lecture The intervening presentations reviewed progress made in specific areas of recovery research In addition to reviewing progress over the last decade we sought to achieve an additional objective in the way that the invited review lectures were organised This was to bring together those doing basic research usually animal research and those whose of the lectures were paired research interests are more clinically orientated Thus some one concentrating on the results of animal studies and one on clinical research findings
