Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology

Coping with Physical Illness Rudolf H. Moos, 2012-12-06 This book discusses how human beings cope with serious physical illness and injury A conceptual model for understanding the process of coping with the crisis of illness is provided and basic adaptive tasks and types of coping skills are identified The major portion of the book is organized around various types of physical illness These physical illnesses which almost all people face either in themselves or their family members raise common relevant coping issues The last few sections cover the crisis of treatment emphasizing the importance of unusual hospital environments and radical new medical treatments of stresses on professional staff and of issues related to death and the fear of dying The material highlights the fact that people can successfully cope with life crises such as major illness and injury rather than the fact that severe symptoms and or breakdowns sometimes occur The importance of support from professional caregivers such as physicians nurses and social workers and from family friends and other sources of help in the community is emphasized Many of the selections include case examples which serve to illustrate the material Coping with Physical Illness has been broadly conceived to meet the needs of a diverse audience There is substantial information about how human beings cope with illness and physical disability but this material has never been collected in one place

The Neuropsychology of Dreams Mark Solms, 2014-02-25 In this book Mark Solms chronicles a fascinating effort to systematically apply the clinico-anatomical method to the study of dreams The purpose of the effort was to place disorders of dreaming on an equivalent footing with those of other higher mental functions such as the aphasia apraxias and agnosias Modern knowledge of the neurological organization of human mental functions was grounded upon systematic clinico-anatomical investigations of these functions under neuropathological conditions It therefore seemed reasonable to assume that equivalent research into dreaming would provide analogous insights into the cerebral organization of this important but neglected function Accordingly the main thrust of the study was to identify changes in dreaming that are systematically associated with focal cerebral pathology and to describe the clinical and anatomical characteristics of those changes The goal in short was to establish a nosology of dream disorders with neuropathological significance Unless dreaming turned out to be organized in a

fundamentally different way than other mental functions there was every reason to expect that this research would cast light on the cerebral organization of the normal dream process

Experimental Techniques in Human Neuropsychology H. Julia Hannay, 1986 This unique sourcebook describes the research methods used to study human brain function and brain behavior relationships These range from relatively simple approaches such as dichotic listening and tachistoscopic presentation to computerized techniques such as cerebral blood flow measurements The description of each method covers the underlying theory variations on the basic paradigm dependent measures reliability and validity and the equipment required The authors also critically review research with normal and clinical populations Because of the rapid expansion of the field of human neuropsychology and accompanying technological advances this volume will be valued as much by experienced researchers as by newcomers seeking an introduction to the variety of available procedures

Rehabilitation of the Brain-Damaged Adult Gerald Goldstein, Leslie Ruthven, 2013-03-07 Basic Issues in Rehabilitation of the Brain Damaged Definitions Because of the vagueness surrounding the term brain damage it is necessary at the outset to define the population to which this book may have some application Although it is usual to speak of the brain damaged patient in a general way the conditions referred to cover a variety of specific disorders In this book we will be discussing only individuals who become brain damaged as adults We will be addressing ourselves specifically to adults who have sustained demonstrable structural brain damage Those conditions in which brain dysfunction is a possible etiological agent such as a number of functional psychiatric disorders will not be considered Thus the entire topic of mental retardation and early life brain damage will not be treated here nor the many problems associated with minimal brain damage syndromes in school age children Modern psychiatric thinking has tended to blur the distinction between the so called functional and organic disorders of Shagass Gershon Friedhoff 1977 but we would add here to the view that the patient with structural brain damage continues to present relatively unique assessment and treatment problems Furthermore the emphasis of this book will be placed on individuals with nonprogressive chronic brain damage

Handbook of Clinical Health Psychology C. Green,R. Meagher,T. Millon,2012-12-06 We seek to throw down the gauntlet with this handbook challenging the hegemony of the behavioral medicine approach to the psychological study and treatment of the physically ill This volume is not another in that growing surfeit of texts that pledge allegiance to the doctrinaire purity of behavioristic thinking or conceptualize their subject in accord with the sterility of medical models Diseases are not our focus nor is the narrow band of behavioral assessment and therapy methodologies Rather we have sought to redefine this amorphous yet burgeoning field so as to place it squarely within the province of a broadly based psychology specifically the emerging substantive discipline of health psychology and the well established professionalism and diverse technologies of clinical psychology The handbook's title Clinical Health Psychology reflects this reorientation explicitly and Chapter 1 addresses its themes and provides its justifications more fully In the process of developing a relevant and comprehensive health assessment tool the editors were struck by the failure of clinical psychologists to avail themselves of the rich vein of materials that comprise the psychosocial world of the physically ill Perhaps more dismaying was the observation that this field was being mined less than optimally by physicians and nonclinical psychologists *National Library of Medicine*

Current Catalog National Library of Medicine (U.S.),1973 First multi year cumulation covers six years 1965 70 **The Mind's Eye** Oliver Sacks,2010-10-26 NATIONAL BESTSELLER From the poet laureate of medicine The New York Times and the author of the classic *The Man Who Mistook his Wife for a Hat* comes a fascinating exploration of the remarkable unpredictable ways that our brains cope with the loss of sight by finding rich new forms of perception Elaborate and gorgeously detailed Again and again Sacks invites readers to imagine their way into minds unlike their own encouraging a radical form of empathy Los Angeles Times With compassion and insight Dr Oliver Sacks again illuminates the mysteries of the brain by introducing us to some remarkable characters including Pat who remains a vivacious communicator despite the stroke that deprives her of speech and Howard a novelist who loses the ability to read Sacks investigates those who can see perfectly well but are unable to recognize faces even those of their own children He describes totally blind people who navigate by touch and smell and others who ironically become hyper visual Finally he recounts his own battle with an eye tumor and the strange visual symptoms it caused As he has done in classics like *The Man Who Mistook his Wife for a Hat* and *Awakenings* Dr Sacks shows us that medicine is both an art and a science and that our ability to imagine what it is to see with another person's mind is what makes us truly human **Sleep Disorders Part I** Pasquale Montagna,Sudhansu

Coping with Physical Illness Rudolf Moos, 2012-12-06 This book provides new ideas about how patients and their families cope with serious health crises. Biomedical knowledge has expanded abruptly in the past decade during which time diagnostic and treatment procedures have become unusually specific and effective. Similarly important advances have taken place in our understanding of the central role of psychosocial factors in health and illness. Recent trends have sparked the formulation of useful concepts of coping skills and social resources and have emphasized the value of an active assertive role for patients in the process of obtaining health care. The emergence of subspecialties such as behavioral medicine and health psychology has stimulated renewed interest in these areas. Moreover the growth of holistic medicine and a biopsychosocial orientation highlights the contribution of a psychosocial perspective in an integrated framework for providing health care. To cover these diverse trends I offer a unified conceptual approach for understanding the process of coping with the crisis of physical illness and identifying the underlying adaptive tasks and domains of coping skills involved in this process. The first half of the book covers coping with selected health crises such as birth defects and perinatal death childhood and adult cancer and chronic physical disabilities.

Dysfluencies Chris Eagle, 2013-11-07 Dysfluencies is the first comprehensive study of how speech disorders are portrayed in modern literature Tracing the roots of this interaction between literary practice and speech pathology back to the rise of aphasiology in the 1860s Dysfluencies examines portrayals of disordered speech by writers like Zola Proust Joyce Melville and Mishima as well as contemporary writers like Philip Roth Gail Jones and Jonathan Lethem Dysfluencies thus speaks directly to the growing interest at present both in popular culture and the Humanities regarding the status of the Self in relation to speech pathology The need for this type of study is clear considering the number of prominent writers whose works foreground disorders of speech Melville Zola Kesey Mishima Roth et al Moreover thinkers like Freud Bergson and Jakobson were similarly concerned with the implications of language breakdown This volume shows this concern began with the rise of neurology and aphasiology which challenged spiritual conceptions of language and replaced them with a view of language as a material process rooted in the brain Dysfluencies traces the history of this interaction between literary practice and speech pathology arguing that works of literature have responded differently to the issue of language breakdown as the dominant views on the issue have shifted from neurological circa 1860s to 1920s to psychological circa 1920s to 1980s and back to neurological during the so called decade of the Brain the 1990s
