The volume explores the current state of the art in the field of evolutionary economics at the levels of the micro e.g. firms and households, meso e.g. industries and institutions, and macro e.g. economic policy, structure and growth. The variety of approaches in this book range from detailed business cycle analyses to Schumpeterian processes of creative destruction. They include thorough theoretical analysis of delayed dynamical systems, empirical studies of Goodwin's classical growth cycle model, and the integration of Keynesian aspects of effective demand and of financial mechanisms that impact the real macro economy, micro economic structural analysis, expectations-driven aspects of micro-founded business cycle modelling.
