Comparative Risk Assessment and Environmental Decision Making Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

Climate Change, Energy, Sustainability and Pavements Kasthurirangan Gopalakrishnan, Wynand JvdM Steyn, John Harvey, 2014-09-25 Climate change energy production and consumption and the need to improve the sustainability of all aspects of human activity are key inter related issues for which solutions must be found and implemented quickly and efficiently To be successfully implemented solutions must recognize the rapidly changing socio techno political environment and multi dimensional constraints presented by today s interconnected world As part of this global effort considerations of climate change impacts energy demands and incorporation of sustainability concepts have increasing importance in the design construction and maintenance of highway and airport pavement systems To prepare the human capacity to develop and implement these solutions many educators policy makers and practitioners have stressed the paramount importance of formally incorporating sustainability concepts in the civil engineering curriculum to educate and train future civil engineers well equipped to address our current and future sustainability challenges This book will prove a valuable resource in the hands of researchers

educators and future engineering leaders most of whom will be working in multidisciplinary environments to address a host of next generation sustainable transportation infrastructure challenges This book proposes a broad detailed overview of the actual scientific knowledge about pavements linked to climate change energy and sustainability at the international level in an original multidimensional multi effects way By the end the reader will be aware of the whole global issues to care about for various pavement technical features around the world among which the implications of modelling including data collection challenging resources saving and infrastructures services optimisation This is a complete and varied work rare in the domain Dr Agnes Jullien Research Director Director of Environmental Development Safety and Eco Design Laboratory EASE Department of Development Mobility and Environment Ifsttar Centre de Nantes Cedex France An excellent compilation of latest developments in the field of sustainable pavements The chapter topics have been carefully chosen and are very well organized with the intention of equipping the reader with the state of the art knowledge on all aspects of pavement sustainability Topics covered include pavement Life Cycle Analysis LCA pervious pavements cool pavements photocatalytic pavements energy harvesting pavements etc which will all be of significant interest to students researchers and practitioners of pavement engineering This book will no doubt serve as an excellent reference on the topic of sustainable pavements Dr Wei Hsing Huang Editor in Chief of International Journal of Pavement Research and Technology IJPRT and Professor of Civil Engineering National Central University Taiwan

The Metabolism of Islands Simron Singh, Marina Fischer-Kowalski, Marian Chertow, 2021 This book makes the case for why we should care about islands and their sustainability Islands are hotspots of biocultural diversity and home to 600 million people that depend on one sixth of the earth s total area including the surrounding oceans for their subsistence Today they are at the frontlines of climate change and face an existential crisis Islands are however potential hubs of innovation that are uniquely positioned to be leaders in sustainability and climate action This volume argues that a full fledged program on island industrial ecology is urgently needed with the aim of offering policy relevant insights and strategies to sustain small islands in an era of global environmental change The nine contributions in this volume cover a wide range of applications of socio metabolic research from flow accounts to stock analysis and their relationship to services in space and time They offer insights into how reconfiguring patterns of resource use will allow island governments to build resilience and adapt to the challenges of climate change

Asphalt Pavements Patrick Lavin, 2003-09-02 Asphalt Pavements provides the know how behind the design production and maintenance of asphalt pavements and parking lots Incorporating the latest technology this book is the first to focus primarily on the design production and maintenance of low volume roads and parking areas Special attention is given to determining the traffic capacity required thickness and asphalt mixture type for parking applications Topics covered include material information such as binder properties testing grading and selection construction information such as mixing plant operation proportioning mixture placement and compaction and design information such as thickness

and mixture design methods and guidelines on applying these to highways city streets and parking Areas It is an essential practical guide aimed at those engineers and architects who are not directly involved in the asphalt industry but who nonetheless need to have a good general knowledge of the subject Asphalt Pavements provides a novice with enough information to completely design construct and specify an asphalt pavement
