Recycling Treated Municipal Wastewater and Sludge Through Forest and Cropland William E. Sopper, Louis T. Kardos, 1973 The collected papers and discussions form a comprehensive survey of this method of treatment and disposal in North America Many of the papers are accompanied by extensive bibliographies enhancing the book's value as a reference volume Institute of Water Pollution Control *Recycling treated municipal wastewater and sludge through forest and cropland* William E. Pereira, 2012-12-06 The past few years have seen the emergence of a growing widespread desire in this country and indeed everywhere that positive actions be taken to restore the quality of our environment and to protect it from the degrading effects of all forms of pollution air noise solid waste and water Since pollution is a direct or indirect consequence of waste if there is no waste there can be no pollution and the seemingly idealistic demand for zero discharge can be construed as a demand for zero waste However as long as there is waste we can only attempt to abate the consequent pollution by converting it to a less noxious form In those instances in which a particular type of pollution has been recognized three major questions usually arise 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of this series of books on environmental engineering is to help the reader formulate useful answers to the second and third of these questions i e to outline the best currently available engineering solutions and to examine their costs in the light of the real level of benefits afforded The traditional approach of applying tried and true solutions to specific pollution problems has been a major factor contributing to the success of environmental engineering and in large measure has accounted for the establishment of a methodology of pollution control **A Problem Analysis for Environmental Forestry Research** William E.
