## Geographies of

**Mars** K. Maria D. Lane, 2010-12-15 One of the first maps of Mars published by an Italian astronomer in 1877 with its pattern of canals fueled belief in intelligent life forms on the distant red planet a hope that continued into the 1960s Although the Martian canals have long since been dismissed as a famous error in the history of science K Maria D Lane argues that there was nothing accidental about these early interpretations Indeed she argues the construction of Mars as an incomprehensibly complex and engineered world both reflected and challenged dominant geopolitical themes during a time of major cultural intellectual political and economic transition in the Western world Geographies of Mars telescopes in on a critical period in the development of the geographical imagination when European imperialism was at its zenith and American expansionism had begun in earnest Astronomers working in the new observatories of the American Southwest or in the remote heights of the South American Andes were inspired Lane finds by their own physical surroundings and used representations of the Earth's arid landscapes to establish credibility for their observations of Mars With this simple shift to the geographer's point of view Lane deftly explains some of the most perplexing stances on Mars taken by familiar protagonists such as Percival Lowell Alfred Russel Wallace and Lester Frank Ward A highly original exploration of geography's spatial dimensions at the beginning of the twentieth century Geographies of Mars offers a new view of the mapping of far off worlds **Uncovering**

**Mars**, 1997 **The Red Planet**, 1973 **Mars** Leonard David, 2016 The next frontier in space exploration is Mars the red planet and human habitation of Mars isn't much farther off Now the National Geographic Channel goes years fast forward with Mars a six part series documenting and dramatizing the next 25 years as humans land on and learn to live on Mars This companion book to the series explores the science behind the mission and the challenges awaiting those brave individuals Filled with vivid photographs taken on Earth in space and on Mars arresting maps and commentary from the world's top planetary scientists this fascinating book will take you millions of miles away and decades into the future to our next home in the solar system *Discovering Mars* William Sheehan, Jim Bell, 2021-11-09 For millennia humans have considered Mars the most fascinating planet in our solar system We've watched this Earth-like world first with the naked eye then using telescopes and most recently through robotic orbiters and landers and rovers on the surface Historian William Sheehan and astronomer and planetary scientist Jim Bell combine their talents to tell a unique story of what we've learned by studying

Mars through evolving technologies What the eye sees as a mysterious red dot wandering through the sky becomes a blurry mirage of apparent seas continents and canals as viewed through Earth based telescopes Beginning with the Mariner and Viking missions of the 1960s and 1970s space based instruments and monitoring systems have flooded scientists with data on Mars s meteorology and geology and have even sought evidence of possible existence of life forms on or beneath the surface This knowledge has transformed our perception of the Red Planet and has provided clues for better understanding our own blue world Discovering Mars vividly conveys the way our understanding of this other planet has grown from earliest times to the present The story is epic in scope an Iliad or Odyssey for our time at least so far largely without the folly greed lust and tragedy of those ancient stories Instead the narrative of our quest for the Red Planet has showcased some of our species most hopeful attributes curiosity cooperation exploration and the restless drive to understand our place in the larger universe Sheehan and Bell have written an ambitious first draft of that narrative even as the latest chapters continue to be added both by researchers on Earth and our robotic emissaries on and around Mars including the latest the Perseverance rover and its Ingenuity helicopter drone which set down in Mars s Jezero Crater in February 2021 *Mars* David Jefferis,2008 Describes the planet Mars its physical characteristics its moons and the history of human exploration of the planet **Voyage to the Red Planet** Terry Bisson,1991-09 *Planet Mars* Francisco W.
