Rain Cynthia Barnett, 2015-04-21 Rain is elemental mysterious precious destructive It is the subject of countless poems and paintings the top of the weather report the source of the world's water Yet this is the first book to tell the story of rain Cynthia Barnett's Rain begins four billion years ago with the torrents that filled the oceans and builds to the storms of climate change It weaves together science the true shape of a raindrop the mysteries of frog and fish rains with the human story of our ambition to control rain from ancient rain dances to the 2 203 miles of levees that attempt to straitjacket the Mississippi River It offers a glimpse of our founding forecaster Thomas Jefferson who measured every drizzle long before modern meteorology Two centuries later rainy skies would help inspire Morrissey's mopes and Kurt Cobain's grunge Rain is also a travelogue taking readers to Scotland to tell the surprising story of the mackintosh raincoat and to India where villagers extract the scent of rain from the monsoon drenched earth and turn it into perfume Now after thousands of years spent praying for rain or worshiping it burning witches at the stake to stop rain or sacrificing small children to bring it mocking rain with irrigated agriculture and cities built in floodplains even trying to blast rain out of the sky with mortars meant for war humanity has finally managed to change the rain Only not in ways we intended As climate change upends rainfall patterns and unleashes increasingly severe storms and drought Barnett shows rain to be a unifying force in a fractured world Too much and not nearly enough rain is a conversation we share and this is a book for everyone who has ever experienced it

The Search For Our Cosmic Ancestry Nalin Chandra Wickramasinghe, 2014-10-21 The idea that life is a cosmic rather than a purely terrestrial phenomenon has progressed from scientific heresy to mainstream science within the short timespan of a few decades The theory of cometary panspermia developed by Fred Hoyle and the present author in the 1970's has been vindicated by a spate of new discoveries in astronomy and biology and also with startling new evidence of microbial fossils in meteorites and micrometeorites The recent Kepler Telescope searches for exoplanets have indicated the presence of over 100 billion habitable planets separated by only a few light years thus making panspermia and the transfer of microbial life between such planets an inevitable fact The book presents a comprehensive and up to date account of the Hoyle Wickramasinghe theory of cometary panspermia in a manner accessible to a wide general readership

Liquid Life Rachel Armstrong, 2019 If we lived in a liquid world the concept of a machine would make no sense Liquid life is metaphor and apparatus that discusses the consequences of thinking

Anderson,2020-06-22 Throughout history the study of sacred texts has focused almost exclusively on the content and

meaning of these writings. Such a focus obscures the fact that sacred texts are always embodied in particular material forms from ancient scrolls to contemporary electronic devices. Using the digital turn as a starting point, this volume highlights material dimensions of the sacred texts of Judaism, Christianity, and Islam. The essays in this collection investigate how material aspects have shaped the production and use of these texts within and between the traditions of Judaism, Christianity, and Islam from antiquity to the present day. Contributors also reflect on the implications of transitions between varied material forms and media cultures. Taken together, the essays suggest that materiality is significant for the academic study of sacred texts as well as for reflection on developments within and between these religious traditions. This volume offers insightful analysis on key issues related to the materiality of sacred texts in the traditions of Judaism, Christianity, and Islam while also highlighting the significance of transitions between various material forms, including the current shift to digital culture.

The Long Morning of Medieval Europe Jennifer R. Davis, 2016-12-05. Recent advances in research show that the distinctive features of high medieval civilization began developing centuries earlier than previously thought. The era once dismissed as a Dark Age now turns out to have been the long morning of the medieval millennium: the centuries from AD 500 to 1000 witnessed the dawn of developments that were to shape Europe for centuries to come. In 2004, historians, art historians, archaeologists, and literary specialists from Europe and North America convened at Harvard University for an interdisciplinary conference exploring new directions in the study of that long morning of medieval Europe, the early Middle Ages. Invited to think about what seemed to each the most exciting new ways of investigating the early development of western European civilization, this impressive group of international scholars produced a wide-ranging discussion of innovative types of research that define tomorrow's field today. The contributors, many of whom rarely publish in English, test approaches extending from using ancient DNA to deducing cultural patterns signified by thousands of medieval manuscripts of saints' lives. They examine the archaeology of slave labor, economic systems, disease history, transformations of piety, the experience of power and property, exquisite literary sophistication, and the construction of the meaning of palace spaces or images of the divinity. The book illustrates in an approachable style the vitality of research into the early Middle Ages and the signal contributions of that era to the future development of western civilization. The chapters cluster around new approaches to five key themes: the early medieval economy, early medieval holiness, representation and reality in early medieval literary art, practices of power in an early medieval empire, and the intellectuality of early medieval art and architecture. Michael McCormick's brief introductions open each part of the volume; synthetic essays by accomplished specialists conclude them. The editors summarize the whole in a synoptic introduction. All Latin terms and citations and other foreign language quotations are translated, making this work accessible even to undergraduates. *The Long Morning of Medieval Europe: New Directions in Early Medieval Studies* presents innovative research across the wide spectrum of study of the early Middle Ages. It exemplifies the promising questions and methodologies at play in the field today and the directions that beckon tomorrow.

Cosmic Womb Chandra Wickramasinghe, Ph.D., Robert Bauval, 2017-12-19 Compelling evidence that life intelligence and evolution on Earth were seeded by comets and cosmic intelligence Explains how life first came from interstellar dust and comets and how later arrivals of cosmic dust and comets spurred evolution Explores the possibility that universal knowledge may be stored in human DNA and how ancient cultures may have known a way to retrieve this knowledge Reveals new discoveries about the dimensions of the Great Pyramid of Giza All ancient cultures link humanity's origins to the heavens The Egyptians for example were adamant that their ancestors came from the stars of Orion and Sirius Today however religion and science assert that life arose spontaneously here on Earth Did the ancients know our true cosmic origins Have they left us clues Expanding on the panspermia theory developed with the celebrated astronomer Sir Fred Hoyle namely that the building blocks of life were imported to Earth by comets in the distant past Chandra Wickramasinghe and Robert Bauval explore the latest findings in support of a cosmic origin for humanity They detail the astrobiological discoveries of organic molecules deep in space how microbes are incredibly resistant to the harshest conditions of space enabling the transfer of genes from one star system to another and the recent recovery of microorganisms from comets still in space They argue that the universe was born and preset with the blueprint of life and that the cosmos must be teeming with lifeforms far older and perhaps far more developed than us They show how life arrived on our planet in the form of interstellar dust containing alien bacteria approximately 3.8 billion years ago and how later comets meteoroids and asteroids brought new bacterial and viral genetic material which was vital for evolution Using the latest advances in physics cosmology and neuroscience the authors

explore how universal knowledge may be stored in human DNA and cells and they postulate that ancient cultures such as the pyramid builders of Egypt and the temple builders of India may have known a way to retrieve this knowledge Sharing new discoveries from experienced architects engineers and mathematicians they show how the Great Pyramid is a three dimensional mathematical equation in stone bearing a potent message for humanity across time and space about who we are and where we come from *Punch* ,1849 *Punch, Or, The London Charivari* ,1849 *Punch* Henry Mayhew,Tom Taylor,Shirley Brooks,Sir Francis Cowley Burnand,Sir Owen Seaman,Mark Lemon,1849 *London Charivari* ,1849 *The Impact of Desert Dust Across the Mediterranean* Stefano Guerzoni,R.
