that not only the information content is important the information about the quality of the data becomes an even more crucial and critical aspect for individuals and organizations when they make plans or take decisions based on the results of their queries More precisely having access to information of known quality becomes critical for the well being and indeed for the functioning of modern industrialized societies Surprisingly despite the urgent need for clear concepts and techniques to judge and value quality and for technology to use such meta information very few scientific results are known and available Few approaches are known to use quality measures for accessing and querying information over the Web Only a limited number of products on the IT market address this burning problem
