Regulation Of Amino Acid Metabolism In Mammals:

Regulation of Amino Acid Metabolism in Mammals Bernard Schepartz, 1973 **Mammalian Protein Metabolism** H. N. Munro, 2013-09-24 Mammalian Protein Metabolism Volume III provides an overview of the state of knowledge on mammalian protein metabolism. It enlarges and adds depth to the picture of protein metabolism provided by Volumes I and II. The present volume covers two aspects of protein metabolism not specifically considered in the earlier parts of the treatise. First there is a section of three chapters dealing with changes in protein metabolism during evolution and during growth and development. At its most fundamental level this part deals in reality with an aspect of regulation of protein metabolism since differences in metabolism between species and changes occurring during growth are both outward expressions of genetic control mechanisms that determine the form and characteristics of an animal. The other section in this volume is a survey of methods appropriate to the study of protein metabolism in mammals. This part of the work should prove of special interest to investigators who require a critical evaluation of the possibilities and limitations of methods applicable to intact animals.

Mammalian Amino Acid Transport M.S. Kilberg, D. Häussinger, 1992 Amino acid transport is a part of each of two larger subjects: amino acid metabolism and the biomembrane transport of various small molecules and ions. Nevertheless in this volume we treat amino acid transport as more than a fragment of either of these two larger subjects. A more comprehensive approach is justified when we remember two historic and ongoing aspects of the title subject. First, amino acid transport had its beginning and acquired a distinct momentum even if somewhat interrupted from 1913 until about 1945 as amino acid metabolism with the central and pioneer work of Van Slyke and Meyer in 1913. The reviews in this volume will show that it steadily becomes a larger aspect of amino acid metabolism broadly perceived. These chapters will show for how many organelles, cells, tissues, organs, and organ systems the transmembrane compartmentations and flows of amino acids play very large parts in their fundamental biological relations. The authors here are tending collectively to evaluate an understanding of amino acid flows across biomembranes and the regulation of these flows as necessary to an ultimate understanding of the full range of development and metabolism. Such an understanding goes far beyond the purely substrate destabilizing contributions by enzymes which have often been arbitrarily limited to that conceptual entity, the cell, and which for so long a splendid time had most of biochemical research attention. Mammalian Protein Metabolism H.N. Munro, 2012-12-02 Mammalian Protein Metabolism Volume IV is an 11 chapter text that describes the regulation of protein metabolism in mammals both at the subcellular level and at the level of the intact organ and of the whole animal. The first two chapters deal with the fundamental control mechanisms in the synthesis and turnover of proteins followed by chapters on the mode of action of hormones on protein metabolism and on the role of free amino acid pools in regulation. These topics are followed by discussions on the regulation of individual amino acid pathways and the diurnal rhythms in protein metabolism. The final chapters explore the regulation of protein metabolism in four major organs and tissues of the body including the
