Regulatory Frameworks for Dam Safety Daniel D. Bradlow, Alessandro Palmieri, Salman M. A. Salman, 2002-10-01

Regulatory Frameworks for Dam Safety was conceived and prepared in response to growing concern over the safety of dams. Given the large number of dams around the world, the safe operation of dams has significant social, economic, and environmental relevance. A dam failure can result in extremely adverse impacts, including a large-scale loss of human life. For countries with large stocks of dams, the issue of dam safety is critical. The book examines the dam safety regulatory frameworks of 22 countries. It draws comparisons and highlights similarities among the various systems. Most important, it identifies essential elements, desirable features, and emerging trends for dam safety regulatory frameworks. The authors are leading experts in their fields. Daniel Bradlow is professor and director of the International Legal Studies Program at the Washington College of Law at American University and was a consultant to the World Commission on Dams. Alessandro Palmieri is Lead Dam Specialist in the Quality Assurance and Compliance Unit of the Environmentally and Socially Sustainable Development Vice Presidency at the World Bank. Salman M. A. Salman is Lead Counsel in the Environmentally and Socially Sustainable Development and International Law Group of the World Bank's Legal Vice Presidency and has published extensively in the area of water law.

Laying the Foundations Marcus J. Wishart, Satoru Ueda, John D. Pisaniello, Joanne L. Tingey-Holyoak, Esteban Boj García, 2020-12-03 Dam safety is central to public protection and economic security. However, the world has an aging portfolio of large dams with growing downstream populations and rapid urbanization, placing dual pressures on these important infrastructures to provide increased services and to do so more safely. To meet the challenge, countries need legal and institutional frameworks that are fit for purpose and can ensure the safety of dams. Such frameworks enable dams to provide water supplies to meet domestic and industrial demands, support power generation, improve food security, and bolster resilience to floods and droughts, helping to build safer communities. **Laying the Foundations: A Global Analysis of Regulatory Frameworks for the Safety of Dams and Downstream Communities** is a systematic review of dam regimes from a diverse set of 51 countries with varying economic, political, and cultural circumstances. These case studies inform a continuum of legal, institutional, technical, and financial options for sustainable dam safety assurance. The findings from the comparative analysis will inform decisionmakers about the merits of different options for dam safety and help them systematically develop the most effective approaches for the country context. By identifying the essential elements of good practices guided by portfolio characteristics, this tool can help identify gaps in existing legal, institutional, technical, and financial frameworks to enhance the regulatory regime for ensuring the safety of dams and downstream communities.

Regulation of Dam Safety: An Overview of Current Practices Worldwide / Reglementation de la Sécurité des Barrages: Revue Internationale des Pratiques Actuelles CIGB

ICOLD, 2025-03-18 ICOLD Bulletin 167 Regulation of Dam Safety: An Overview of Current Practices Worldwide provides a

comprehensive review of legal and regulatory arrangements for the safety of dams among the countries represented at ICOLD. As such, this review is essentially a snapshot of the situation being in place at the end of the first and the beginning of the second decade in the 21st century. This Bulletin is useful not only to these countries which have weak or non-existent legal and regulatory dam safety frameworks but also to these jurisdictions which are considering changes and improvements to existing legislation and regulations. Le Bulletin 167 de la CIGB, Réglementation de la Sécurité des Barrages, Revue Internationale des Pratiques Actuelles, fournit une revue complète des dispositions légales et réglementaires en matière de sécurité des barrages au sein de pays représentés la CIGB. Ce titre, cette revue est une photographie instantanée de la situation autour des années 2010. Il peut être utile non seulement pour les pays qui ont un cadre juridique et réglementaire réduit ou inexistant pour la sécurité des barrages mais également ceux qui envisagent des changements et des améliorations de leurs législations et réglementations en vigueur.

Laying the Foundations Esteban Boj Garcia, Kimberly N. Lyon, John Pisaniello, Joanne L. Tingey-Holyoak, Satoru Ueda, Marcus J. Wishart, 2022. The foundation for effective dam safety assurance is an appropriate and well-designed regulatory framework that captures the legal, institutional, technical, and financial elements in the reality of a particular jurisdiction. Aging infrastructure, diminishing returns on new projects, changes in climate and weather patterns, and shifting trends of human settlement require ever-increasing attention in the effort to ensure the safety of dams and downstream communities. Establishing and maintaining a regulatory framework that is fit for purpose is therefore necessary for assuring the quality of dam design, construction, and operations. The framework also ensures that safety measures are reflective of the risks inherent in managing these structures and the context in which they are developed. Such frameworks need to be developed as part of a holistic strategy for water management that is integrated in basin and regional planning processes. The purpose of this Decision Support Tool is to guide countries and jurisdictions through various considerations in designing and updating their regulatory environment for dam safety assurance. This Decision Support Tool aggregates information derived from a comprehensive review and comparative analysis of regulatory frameworks in 51 countries. It presents a typology of situations that correlate with regulatory framework options along a continuum from minimum to maximum assurance of safety. It then presents hypothetical examples of how the Decision Support Tool can be used by countries and jurisdictions to assess their own situations and which regulatory options may be appropriate to consider for improving dam safety assurance.
