The Neuropsychology of Everyday Life: Assessment and Basic

Competencies David E. Tupper, Keith D. Cicerone, 2012-12-06 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course, clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of trying to help our physician colleagues differentiate patients with neurologic from those with psychiatric disorders. In time, experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered us little valid information upon which to base such complex differential diagnostic decisions. It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student. In the late 1940s such pioneers as Ward Halstead, Alexander Luria, George Yacorzynski, Hans Lukas Teuber, and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice. However, the only psychological tests that the clinical psychologist of my immediate post-Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue, Rorschach, Draw-A-Person, Bender-Gestalt, and Graham-Kendall Memory for Designs Test.

Handbook of Vocational Rehabilitation and Disability Evaluation Reuben Escorpizo, Sören Brage, Debra Homa, Gerold Stucki, 2014-12-01 This book presents the state of the art in the application and implementation of the WHO's International Classification of Functioning, Disability and Health (ICF) in the areas of vocational rehabilitation as a primary topic and disability evaluation as a secondary topic. Application of the ICF and implementation strategies toward a holistic and comprehensive approach to work disability and vocational rehabilitation programs are presented along with clinical cases and exercises. The ICF as a topic in health and disability has been gaining momentum since its approval by the World Health Assembly in 2001 and great progress has been made since then. However, the integration of the ICF in the realm of vocational rehabilitation has been lacking despite the fact that work and employment are a major area in people's lives, particularly those who have work disability. This book will advance the professional practice of vocational rehabilitation, rehabilitation counseling, occupational medicine, and allied health science.
