With a focus on the increased need for specialist ethics training as part of postgraduate education in the Humanities and Social Sciences and the necessity for fostering sensitivity in cross cultural comparative research the book seeks to enable people to engage in ethical decision making and moral reasoning while conducting research. Chapters examine the implications of geographical research for conceptualising ethics and discuss specific case studies from which more general conclusions linked to conceptual debates are drawn. As a research based reference guide for tackling ethically sensitive projects and international differences in legal and institutional standards and requirements the book is useful for postgraduate and undergraduate students as well as academics teaching at senior levels.

The National Geographical Journal of India, 1993 African-American Perspectives on Biomedical Ethics Harley Flack, Edmund D. Pellegrino, 1992. By analyzing the amalgam of Greek philosophy, Jewish and Christian teachings and secular humanism that composes our dominant ethical system the authors of this volume explore the question of whether or not Western and non Western moral values can be commingled without bilateral loss of cultural integrity. They take as their philosophical point of departure the observation that both ethical relativism and ethical absolutism have become morally indefensible in the context of the multicultural American life and they variously consider the need for an ethical middle ground.
