The first edition of the Encyclopedia of Complexity and Systems Science ECSS 2009 presented a comprehensive overview of granular computing GrC broadly divided into several categories Granular computing from rough set theory Granular Computing in Database Theory Granular Computing in Social Networks Granular Computing and Fuzzy Set Theory Grid Cloud Computing as well as general issues in granular computing In 2011 the formal theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science Pattern Recognition And Big Data Sankar Kumar Pal, Amita Pal, 2016-12-15 Containing twenty six contributions by experts from all over the world this book presents both research and review material describing the evolution and recent developments of various pattern recognition methodologies ranging from statistical linguistic fuzzy set theoretic neural evolutionary computing and rough set theoretic to hybrid soft computing with significant real life applications Pattern Recognition and Big Data provides state of the art classical and modern approaches to pattern recognition and mining with extensive real life applications The book describes efficient soft and robust machine learning algorithms and granular computing techniques for data mining and knowledge discovery and the issues associated with handling Big Data Application domains considered include bioinformatics cognitive machines or machine mind developments biometrics computer vision the e nose remote sensing and social network analysis

Intrusion Detection Nandita Sengupta, Jaya Sil, 2020-01-24 This book presents state of the art research on intrusion detection using reinforcement learning fuzzy and rough set theories and genetic algorithm Reinforcement learning is employed to incrementally learn the computer network behavior while rough and fuzzy sets are utilized to handle the uncertainty involved in the detection of traffic anomaly to secure data resources from possible attack Genetic algorithms make it possible to optimally select the network traffic parameters to reduce the risk of network intrusion The book is unique in terms of its content organization and writing style Primarily intended for graduate electrical and computer engineering students it is also useful for doctoral students pursuing research in intrusion detection and practitioners interested in

network security and administration The book covers a wide range of applications from general computer security to server network and cloud security

Knowledge Representation Techniques Patrick Doherty,Witold Lukaszewicz,Andrzej Szalas,2007-05-31 1 1 Background The basis for the material in this book centers around research done in an ongoing long term project which focuses on the development of highly autonomous unmanned aerial vehicles systems The actual platform which serves as a case study for the research in this book will be described in detail later in this chapter Before doing that a brief background of the motivations behind this research will be provided One of the main research topics in the project is knowledge representation and reasoning and its use in Uav platforms A very strong constraint has been placed on the nature of research done in the project where theoretical results to the greatest extent possible should serve as a basis for tractable reasoning mechanisms for use in a fully deployed autonomous Uav operating under soft real time constraints associated with the types of mission scenarios envisioned Considering that

much of the work with knowledge representation in this context focuses on application domains where one can only hope for an incomplete characterization of such domains this methodological constraint has proven to be quite challenging since in essence the focus is on tractable approximate and nonmonotonic reasoning systems As is well known until recently nonmonotonic formalisms have had a notorious reputation for lack of tractable and scalable reasoning systems **Rough**
