Balthazar, 2013-07-05 Opera has been around ever since the late 16th century and it is still going strong in the sense that operas are performed around the world at present and known by infinitely more persons than just those who attend performances On the other hand it has enjoyed periods in the past when more operas were produced to greater acclaim Those periods inevitably have pride of place in this Historical Dictionary of Opera as do exceptional singers and others who

combine to fashion the opera whether or not they appear on stage But this volume looks even further afield considering the cities which were and still are opera centers literary works which were turned into librettos and types of pieces and genres While some of the former can be found on the web or in other sources most of the latter cannot and it is impossible to have the whole picture without them Indeed this book has an amazingly broad scope The dictionary section with about 340 entries covers the topics mentioned above but obviously focuses most on composers not just the likes of Mozart Verdi and Wagner but others who are scarcely remembered but made notable contributions Of course there are the divas but others singers as well and some of the most familiar operas Don Giovanni Tosca and more Technical terms also abound and reference to different genres from antimasque to zarzuela Since opera has been around so long the chronology is rather lengthy since it has a lot of ground to cover and the introduction sets the scene for the rest This book should not be an end but rather a beginning so it has a substantial bibliography for readers seeking more specific or specialized works It is an excellent access point for readers interested in opera

*Big Bangs* Howard Goodall, 2011-08-31 The dramatic story of five key turning points in a thousand years of Western music discoveries that changed the course of history Who first invented Doh Re Mi What do we mean by in tune Looking back down the corridor of a thousand years Howard Goodall guides us through the stories of five seismic developments in the history of Western music His big bangs may not be the ones we expect some are surprising and some are so obvious we overlook them but all have had an extraordinary impact Goodall starts with the invention of notation by an 11th century Italian monk which removed the creation of music from the hands of

the players to the pens of the composers moves on to the first opera then to the invention of the piano and ends with the story of the first recording made in history Howard Goodall has the gift of making these complicated musical advances both clear and utterly fascinating Racy and vivid in a narrative full of colourful characters and graphic illustrations of technical processes he also gives a wonderful sense of the culture of trial and error and competition be it in 11th century Italy or 19th century America in which all progress takes place Big Bangs opens a window on the crucial moments in our musical culture discoveries that made possible everything from Bach to the Beatles and tells us a riveting story of a millennium of endeavour
