

Although it was America's first public railroad, chartered in 1827, the Baltimore & Ohio did not enter the lucrative Philadelphia and New York City markets until the 1880s, long after its rivals, notably the Pennsylvania Railroad, had established themselves in the northeast corridor. In order to compete, B & O executives realized, they would need to create a railroad like no other; and in 1890 they launched the Royal Blue Line, offering premier passenger service between Washington, D.C., and New York City. It boasted the company's fastest locomotives (designed specifically for the line and featuring the country's first mainline passenger diesel engine), its most luxurious passenger cars (the first in the nation to be air-conditioned), and dining cars that served exquisite regional cuisine. A motor coach service took passengers from the line's New Jersey terminus into Manhattan and is still fondly remembered by many as the most civilized way to enter the city. The Royal Blue Line was, as advertised, the "Finest Daylight Train Service in the World."

In *Royal Blue Line*, Herbert H. Harwood, Jr., recounts the 70-year history of the B & O's showcase service, detailing the creation of the Royal Blue image, the design of equipment and services appropriate to this image, the B & O's distinctive marketing campaigns, and its stubborn corporate pride in the line, which led to question-

able business decisions and, ultimately, financial collapse. Generously illustrated with over 250 evocative photographs, advertisements, menus, timetables, and maps, *Royal Blue Line* vividly recalls America's most regal railway journey.

"Generations of East Coast travelers readily associate the name Royal Blue with memories of deluxe passenger-train service . . . streamlined design, carefully selected blue-and-gold color schemes, sleek locomotives, and luxury appointments. Herbert H. Harwood, Jr.'s *Royal Blue Line* delightfully explores the history of this legendary train."

—Courtney B. Wilson, Executive Director, B & O Railroad Museum

Herbert H. Harwood, Jr., worked in the finance and marketing departments of the B & O Railroad and its successor, Chesapeake System Railroads, for thirty years. He is the author of numerous books about railway history, including *Impossible Challenge: The Baltimore & Ohio Railroad in Maryland* and *The Lake Shore Electric Railway Story*. He lives in Baltimore. Courtney B. Wilson is executive director of the B & O Railroad Museum, located in Baltimore.

Martínez,2023-05-30 Since the initial predictions for the existence of Weyl fermions in condensed matter many different experimental techniques have confirmed the existence of Weyl semimetals Among these techniques optical responses have shown a variety of effects associated with the existence of Weyl fermions In chiral crystals we find a new type of fermions protected by crystal symmetries the chiral multifold fermions that can be understood as a higher spin generalization of Weyl fermions This work provides a complete description of all chiral multifold fermions studying their topological properties and the k p models describing them We compute the optical conductivity of all chiral multifold fermions and establish their optical selection rules We find that the activation frequencies are different for each type of multifold fermion thus constituting an experimental fingerprint for each type of multifold fermion Building on the theoretical results obtained in the first part of our analysis we study two chiral multifold semimetals RhSi and CoSi We analyze the experimental results with k p and tight binding models based on the crystal symmetries of the material We trace back the features observed in the experimental optical conductivity to the existence of multifold fermions near the Fermi level and estimate the chemical

potential and the scattering lifetime in both materials Finally we provide an overview of second order optical responses and study the second harmonic generation of RhSi We find a sizeable second harmonic response in the low energy regime associated with optical transitions between topological bands However this regime is extremely challenging to access with the current experimental techniques We conclude by providing an overview of the main results highlighting potential avenues to further research on chiral multifold semimetals and the future of optical responses as experimental probes to characterize topological phases
