Town and Country Planning in the UK J. B. Cullingworth, Vincent Nadin, 2002 Town and Country Planning in the UK has become the bible of British planning It provides an explanation of the nature of planning the institutions and organisations involved the plans and other tools used by planners planning policies and more

Adapting Institutions to Climate Change Great Britain. Royal Commission on Environmental Pollution, 2010 The overwhelming scientific consensus is that the earth is warming because of human activities Adaptation will be necessary even if mitigation efforts are markedly increased because we are already locked in to climate change as a result of historic greenhouse gas emissions Projections show that it is likely that global average temperatures will rise by 2 degrees C and there is the potential for a 4 degree C rise by the end of the century UK projections suggest warmer drier summers and warmer wetter winters The consequences are likely to be profound even devastating with more extreme events floods drought and heat waves coupled with sea level rises Policies and practice on water management coast protection and nature conservation will need to change This report explores how institutions should adapt their policies to a changing climate and offers a ten point check list to be followed by all organisations The Commission found many institutions are poorly prepared to adapt to climate change and many have simply not started to consider it The Commission makes recommendations designed to help institutions develop their capacity to respond to this challenge In contrast to climate change mitigation where local actions have global benefits adaptation is primarily about local action with local consequences that may differ markedly in different parts of the UK

Town and Country Planning in the UK Barry Cullingworth, Vincent Nadin, 2003-09-02 Town and Country Planning in the UK has become the Bible of British planning In this new edition detailed consideration is given to the nature of planning and its historical evolution central and local government the EU and other agencies the framework of plans and other instruments development control land policy and planning gain environmental and countryside planning sustainable development waste and pollution heritage and transport planning urban policies and regeneration This twelfth edition has been completely revised and expanded to cover the whole of the UK The new edition explains more fully the planning policies and actions of the European Union and takes into account the implications of local government reorganization the plan led system and the growing interest in promoting sustainable development

Novel Materials in the Environment Great Britain. Royal Commission on Environmental Pollution, 2008 The Royal Commission's decision to study novel materials was motivated by concern about the potential for releases to the environment arising from increasing industrial applications of metals and minerals that have not previously been widely used and secondly by the embodiment of nanoparticles and nanotubes in a wide range of consumer products and specialist applications in fields such as medicine and environmental remediation Most of the evidence received focused on nanomaterials particles fibres and tubes on the scale of a few billionths of a metre Chapters 2 and 3 explore the extent to which novel substances are currently being deployed the plausible pathways by which

they might enter the environment their likely environmental destinations in use or disposal and the possible consequences of their release to those destinations Chapter 4 considers what arrangements would be most appropriate for the governance of emerging technologies under two conditions that pose serious constraints on any regulator First is the condition of ignorance about the possible environmental impacts in the absence of any kind of track record for the technology Second is the condition of ubiquity the fact that new technologies no longer develop in a context of local experimentation but emerge as globally pervasive systems which challenges both trial and error learning and attempts at national regulation Both new governance approaches and modifications to existing ones are likely to be called for They will need to be rooted in ideas of adaptive management that require multiple perspectives on the issues The Commission's recommendations are based on the premise that it is the functionality of the material not particle size or mode of production which is critical for evaluating its potential impact on the environment or human health *Report* Great Britain. Crop Spraying and the Health of Residents and Bystanders Great Britain. Royal Commission on Environmental Pollution,2007 This report addresses a complex and controversial issue the human health risks associated with the use of agricultural pesticides Some people are extremely concerned about their potential exposure to pesticides arising because they occupy properties adjacent to farmland or because they have or have had access to such land for example when using footpaths The official position in the UK in response to these concerns has been that a robust approach to the assessment of human health risks associated with pesticide exposure already exists and that there is no scientific case for taking additional measures such as the introduction of no spray buffer zones to protect members of the public who may be in the vicinity of a sprayed area But those who consider themselves to be adversely affected by pesticide spraying have not been reassured and have continued to campaign for the adoption of more precautionary measures **The urban**

environment Great Britain: Royal Commission on Environmental Pollution,2007-03-06 This Report from the Royal Commission on Environmental Pollution examines the environmental footprint of our towns and cities in the light of the government's Regional Spatial Strategies and the Sustainable Communities Plan which will usher in a building boom that will shape the UK's built environment for centuries to come The Report looks at the current context with particular attention to urban expansion and regeneration The Royal Commission also looks at environmental issues including tackling carbon dioxide emissions from urban areas the role of the environment in health and wellbeing maximising community benefits of the natural environment and creating green infrastructure the framework right seeing a specific need for public policy to promote the environmental component of sustainable development and incentives and information to raise environmental standards over time environmental sustainability Turning the Tide Great Britain. Royal Commission on Environmental Pollution,Sir Tom Blundell,2004 This Royal Commission report on protection of the marine environment focuses on the impact of marine fishing in the seas around the UK both on fish populations and the wider ecosystem It consider a range of

issues including the role of the fishing industry and its growth over the last 50 years the legal framework for the marine environment and fisheries at the national European and international levels the impact of fishing and the legacy of overfishing aquaculture fisheries marine protected areas improved fisheries management and a system of marine spatial planning The report concludes that as a society we give much lower priority to protecting our seas compared with the land and over fishing is a global problem which has led to the collapse of fisheries in many areas This situation requires significant urgent change which recognises the need for sustainable fisheries management and avoids the degradation of our seas placing it within the context of wider management of human activities in the marine environment Recommendations made include the introduction of a Marine Act to establish a statutory framework with strategic objectives for marine environmental protection a move away from a presumption in favour of fishing rights to a precautionary approach which requires demonstration that fishing activity is environmentally sustainable establishing a network of marine protected areas within the UK over the next five years which would lead to 30 per cent of the UK s exclusive economic zone being closed to commercial fishing and a change in the emphasis of research away from management of fish populations towards a wider focus on the marine environment

Knowledge, Policy, and Expertise Susan E. Owens, 2015 This book presents a fascinating analysis of expertise and policy formation based on an in depth study of the UK Royal Commission on Environmental Pollution The Commission provided expert advice to governments from 1970 to 2011 Often portrayed as a scientific body it was in fact an interesting hybrid which embodied wide ranging expertise It delivered thirty three reports leaving a significant mark on British environmental policy and having influence within Europe and beyond Drawing upon an extensive literature and a wide range of sources *Knowledge Policy and Expertise* provides the only full account of this important advisory body covering a period in which the policy landscape was profoundly transformed It offers a rich and detailed analysis of authority autonomy and trust of the diverse roles that advisors can play and the networks within which they operate and of the circumstances of influence in which expert advice comes to be accepted gratefully used strategically absorbed in diffuse ways or ignored Above all this book demonstrates the complexity and contingency of knowledge policy relations contributing substantially to a theory of expertise and drawing out important implications for the future of good advice

Committee Reports Published by HMSO Indexed by Chairman, 1988 *Transport and the Environment* Great Britain. Royal Commission on Environmental Pollution, 1994

Soil Erosion and Sediment Redistribution in River Catchments Philip Neil Owens, Alison J. Collins, 2006 There can be little doubt that issues relating to soils and sediments are moving up the political agenda and a realization that we need to collectively manage and protect both soil and water resources In order to manage this delicate interface attention is being increasingly directed towards holistic land river management demanding a greater appreciation of the interaction between soils and sediments This book reviews the major achievements recently made in soil erosion and sediment redistribution research and management and identifies future

requirements **Government Publications** Great Britain. Her Majesty's Stationery Office,1993 Demographic Change and the Environment Great Britain. Royal Commission on Environmental Pollution,2011 In Demographic Change And The Environment the Royal Commission on Environmental Pollution analyses demographic trends in the UK and their potential environmental impacts Apart from total numbers of people it is also important to consider other demographic trends such as changes in the age structure growth in the number of households and where people live and work These demographic trends have environmental impacts through the demand for water The generation of waste air quality greenhouse gas emissions and changes in biodiversity Government has not given adequate attention To The implications of demographic change For The environment Unless the issues are addressed urgently there is substantial risk of costly problems emerging in the next 40 years More important than total population size are factors such as household size The age structure of the population and where people live Public policy can have very limited direct effects on these demographic factors with the exception of where people live Patterns of consumption have a greater impact on the environment than demographic factors There is far greater scope to influence consumption patterns and their impact A step change is needed in efforts to increase resource use efficiency The demand for new housing and related development as a result of demographic change will increasingly come up against environmental constraints in some parts of the country The constraints can be managed but at a significant economic and environmental cost The government should compare these costs with the cost of enhanced incentives to encourage development in areas facing fewer constraints **HMSO Annual Catalogue** Great Britain. Her Majesty's Stationery Office,1986 **Effluent Treatment and Waste Minimisation** Institution of Chemical Engineers (Great Britain). Yorkshire Branch,1993 This text details a conference held in Leeds in March April 1993 Contents include effluent treatment waste minimization and water management contaminated land and the water environment and the AIRE and Calder project a regional waste minimization club **Interpreting the Precautionary Principle** Timothy O'Riordan,2013-07-04 Viewed from the perspective of environmental management this study describes the implications and applications of the precautionary principle a theory of avoiding risk even when its likelihood seems remote This principle has been employed in the United Nations Framework Convention on Climate Change and the North Atlantic Convention yet it is not widely understood This study examines the history and context of the principle and its applications to law governmental policies business and investment scientific research and international relations **Clean and Competitive** Rupert Howes,Jim Skea,Bob Whelan,2013-11-05 Reconciling wealth creation and environmental care is one of the key challenges in the pursuit of sustainable development Companies considering greener modes of operation are mindful of their formal responsibilities to advance shareholders interests The age of globalization and intensified competition has increased disincentives to be green for its own sake And yet a surprisingly high proportion of large companies have put in place environmental management regimes and invest considerable time and resources in them However the public continues to believe that these companies

are failing to take their environmental responsibilities seriously and campaigners are unimpressed with the results of industrial self regulation In short there is a gulf in perception between industry and the consumer Clean and Competitive explores the challenge of motivating industry to address environmental issues drawing on work undertaken by Sussex University s Science Policy Research Unit SPRU and the Centre for the Exploitation of Science and Technology CEST The authors explore in detail industrial responses to prominent environmental issues including climate change air quality water pollution waste minimization and product recycling They assess various approaches to environmental problems such as traditional regulation partnership voluntary agreements and market based instruments Finally they recommend practical ways forward for addressing an ever more complex environmental agenda This thoughtful and articulate text is recommended for students on environmental management courses policy makers and environmental managers within industry

Book catalog of the Library and Information Services Division Environmental Science Information Center. Library and Information Services Division,1977 *The Politics of Scientific Advice* Justus Lentsch,Peter Weingart,2011-06-02 Controversies over issues such as genetically engineered food foot and mouth disease and the failure of risk models in the global financial crisis have raised concerns about the quality of expert scientific advice The legitimacy of experts and of the political decision makers and policy makers whom they advise essentially depends on the quality of the advice But what does quality mean in this context and how can it be achieved This volume argues that the quality of scientific advice can be ensured by an appropriate institutional design of advisory organisations Using examples from a wide range of international case studies including think tanks governmental research institutes agencies and academies the authors provide a systematic guide to the major problems and pitfalls encountered in scientific advice and the means by which organisations around the world have solved these problems
