Royal Air Force At War:

The American Eagle Squadrons of the Royal Air Force Timothy S. Good, 2020-04-16 While the United States sought to remain neutral in the early years of World War II some Americans did not. This book is the first to provide the operational records and combat reports of the three American Eagle Royal Air Force squadrons units comprised of volunteer American pilots who served with the British prior to the U S entering the war. The records tell the story of the more than 200 pilots who against federal law flew with the British in their fight against Nazi Germany. While some Americans served individually in other RAF units these three squadrons the 71st, 121st and 133rd were the only ones organized exclusively for Americans. They were the first of dozens of American fighter squadrons that would soar over Europe. Royal Air Force at War Royal Air Force Benevolent Fund, 1984 Royal Air Force Quarterly and Commonwealth Air Forces Journal, 1942 **The Royal Air Force** John Buckley, Paul Beaver, 2018-07-04 In 1918 the Royal Air Force became the first major independent air force in the world. Formed to serve a strategic need in the most intensive war that Britain had then fought the RAF continued in the inter war era to play a key role in the political and diplomatic world and in defending the Empire. During the Second World War the RAF was pivotal in defending Britain from invasion in the Battle of Britain and then in leading the assault on the Axis powers most notably through the contentious bomber offensive against Germany. In the post war world the RAF adapted and developed into a force to meet the needs of the United Kingdom during the Cold War the retreat from Empire and most recently in the move to coalition warfare against low intensity threats all against a backdrop of diminishing resources and shifting priorities. This is the story of the RAF over the first century of its existence how it has confronted the many challenges and threats it has faced from the Luftwaffe in 1940 through the spectre of nuclear holocaust in the Cold War to the fight against terrorism in the 21st century and how it has contributed to the defence of the United Kingdom throughout that period. The Birth of the Royal Air Force in World War I Charles River Editors, 2017-10-13 Includes pictures Includes contemporary accounts Includes online resources and a bibliography for further reading One of the most important breakthroughs in military technology associated with World War I and certainly the one that continues to capture the public imagination was the use of airplanes which were a virtual novelty a decade before. While the war quickly ground to a halt in its first few months the skies above the Western Front became increasingly busy. The great powers had already been acquiring aircraft for potential uses but given that aerial warfare had never been a major component of any conflict it is understandable that few on either side had any idea what the planes were capable of doing. Furthermore at the start of the war all sides aircraft were ill equipped for combat mostly because the idea that planes might somehow fight was still a novel one and the adaptations had not yet been developed that would allow the aerial battles later in the war. As a result aircraft were used almost entirely for reconnaissance early on allowing generals to gain unprecedented levels of information about enemy movements. Such intelligence allowed the French to counter German movements in what became the First Battle of

the Marne ending Germany's hopes for victory through the Schlieffen plan. Similarly in the east German planes were vital in tracking, encircling and destroying Russian forces at Tannenberg. Some armies such as the French saw air intelligence as a strategic matter with aircraft capable mainly of identifying enemy forces before battle and contributing to advanced preparations. The Germans on the other hand believed that aircraft could provide tactical information once battle had commenced. Pilots such as Oswald Boelcke, Germany's first great aerial officer, would fly over enemy positions in two-seat aircraft with a spotter in the back identifying Allied positions and using colored lights to direct the fire of artillery on the ground. Of course spotting took on great importance because of the growing range and power of artillery. Much of the fire from the great guns was aimed indirectly since the gunners could not see their targets and thus relied on intelligence from others to direct them. Maps of enemy-held territory were often woefully inadequate to start with and with the need to know where moving enemy formations were positioned, the business gained an added complexity but aircraft could cut through this by providing up-to-date intelligence on enemy positions and sending it back to the gun batteries which were lobbing shells over their own front lines. The Royal Air Force (RAF), Britain's legendary air arm, was born in the skies above the First World War. The British had previously used balloons for spotting and reconnaissance for decades and in the years leading up to the war, planes started seeing military use. They mostly provided reconnaissance though experiments were made in using them offensively. During the Boer War of 1899-1902, the British Army used the crews of helium-filled balloons to plot and help target artillery fire. But these were small tentative steps. The first patent to fit a machine gun to a plane taken out in 1910 had not yet led to active fighting vehicles and there was no doctrine, no tactics and no combat between massed air fleets. That changed during World War I as the skies above the Western Front became the crucible in which the preceding fragments of aerial warfare were smelted in the white-hot heat of war. For the British, this meant the creation of a large and unified flying force which by 1918 would become the RAF. *The Birth of the Royal Air Force in World War I: The History and Legacy of British Air Power during the Great War* examines the creation and evolution of the RAF over the course of World War I.
