The remainder were then withdrawn from operations and sent to the Academy for training within their respective branches. The first combat wearing the top hat was on 10th July 1914, and the first experimental machine gun was used on 11th July 1914. The official records of the

James Watson (1942) of the US Air Research
Administration, Northridge, in July 1944, reported
that 2000 tons of the top element (approximately a half
million dollars worth) of U-235 had been taken from
German stockpiles. It was the largest amount of
uranium ever taken from the enemy. Watson
estimated that the uranium taken by the Allies would
be sufficient to produce 1000 tons of plutonium, which
would be enough to make 1000 atomic bombs. This
was a very rough estimate, but it was the first time
that the Allies had a realistic estimate of the amount
of uranium available to the enemy.

A History of the Mediterranean Air War, 1940-1945 Christopher Shores, Giovanni Massimello, Russell Guest, Frank Olynk, Winfried Bock, 2016-08-05 The third

volume in the epic military aviation series focuses on the Allied invasion of North Africa during World War II. This work of WWII history takes us to November 1942 to explain the background of the first major Anglo American venture Operation Torch, the invasion of French North Africa. Describing the fratricidal combat that followed the initial landings in Morocco and Algeria, it then considers the unsuccessful efforts to reach northern Tunisia before the Germans and Italians could get there to forestall the possibility of an attack from the west on the rear of the Afrika Korps. Forces then beginning their retreat from El Alamein. The six months of hard fighting that followed as the Allies built up the strength of their joint air forces and gradually wrested control of the skies from the Axis are recounted in detail. The continuing story of the Western Desert Air Force is told as it advanced from the east to join hands with the units in the west. Also covered are the arrivals over the front of American pilots and crew: the P 38 Lightning, the Spitfire IX and the B 17 Flying Fortress, and of the much feared Focke Wulf Fw 190. The aerial activities over Tunisia became one of the focal turning points of World War II yet are frequently overlooked by historians. Here the air-sea activities, the reconnaissance flights and the growing day and night bomber offensives are examined in detail.

Flak Edward B. Westermann, 2001-11-12. Air raid sirens wail, searchlight beams flash across the sky and the night is aflame with tracer fire and aerial explosions as Allied bombers and German anti-aircraft units duel in the thundering darkness. Such cinematic scenes played out with increasing frequency as World War II ground to a close. Were more than mere stock material for movie melodramas. As Edward Westermann reveals, they point to a key but largely unappreciated aspect of the German war effort that has yet to get its full due. Long the neglected stepchild in studies of World War II air campaigns, German flak or anti-aircraft units have been frequently dismissed by American, British and German historians and by veterans of the European air war as ineffective weapons that wasted valuable material and personnel resources desperately needed elsewhere by the Third Reich. Westermann emphatically disagrees with that view and makes a convincing case for the significant contributions made by the entire range of German anti-aircraft defenses. During the Allied air campaigns against the Third Reich, well over a million tons of bombs were dropped upon the German homeland, killing nearly 300,000 civilians, wounding another 780,000 and destroying more than 3,500,000 industrial and residential structures. Not surprisingly, that aerial Armageddon has inspired countless studies of both the victorious Allied bombing offensive and the ultimately doomed Luftwaffe defense of its own skies. By contrast, flak units have virtually been ignored despite the fact that they employed more than a million men and women, were responsible for more than half of all Allied aircraft losses, forced Allied bombers to fly far above high accuracy altitudes and thus allowed Germany to hold out far longer than it might have otherwise. Westermann's definitive study sheds new light on every facet of the development and organization of this vital defense arm, including its artillery, radar, searchlight, barrage, balloon, decoy sites and command components. Highlighting the convergence of technology, strategy, doctrine, politics and economics, *Flak* also provides revealing insights into German strategic thought, Hitler's obsession with micromanaging the war and the lives of the

members of the flak units themselves including the large number of women factory workers and even POWs who participated
