This is a practical introduction to the key computing concepts of networks and communications suitable for a first year undergraduate or industrial course It provides the foundational knowledge on which to build a fully developed understanding of modern communications methodologies techniques and standards It will also be a useful professional reference companion The book begins with a general introduction to data communications and the options commonly open to the system designer It then provides overviews of the key areas in which design decisions must be made communication media interface standards network architectures modems and multiplexers network topologies switching and access control local area networks wide area networks performance software issues security and implementation As a second edition of an established text the book has been thoroughly revised and improved but retains the strengths of the first edition in its clear and well illustrated exposition It includes current developments in standards and architecture including ATM B ISDN SNMP TCP IP and other state of the art features of the computer communications world In its first edition the book was an authoritative textbook and personal reference for industry In this new edition it should be even more essential for all with a need for an accessible modern technical introduction to computer communications and networks Suitable for a practically orientated computer science course at degree level or for an introductory industrial course **Automated Biometrics**

David Zhang, 2000-05-31 Biometrics based authentication and identification are emerging as the most reliable method to

authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature palmprint iris hand voice and face that can be used to authenticate a person's identity or establish an identity from a database With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently there are over ten different biometrics systems that are either widely used or under development Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications However very few books are exclusively devoted to such issues of automated biometrics Automated Biometrics Technologies and Systems systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security
