Nature By Design People Natural Process And Ecological Design:

Nature by Design Eric Higgs, 2003-04-25 Ecological restoration is the process of repairing human damage to ecosystems. It involves reintroducing missing plants and animals, rebuilding soils, eliminating hazardous substances, ripping up roads, and returning natural processes such as fire and flooding to places that thrive on their regular occurrence. Thousands of restoration projects take place in North America every year. In *Nature by Design*, Eric Higgs argues that profound philosophical and cultural shifts accompany these projects. He explores the ethical and philosophical bases of restoration and the question of what constitutes good ecological restoration. Higgs explains how and why the restoration movement came about, where it fits into the array of approaches to human relationships with the land, and how it might be used to secure a sustainable future. Some environmental philosophers and activists worry that restoration will dilute preservation and conservation efforts and lead to an even deeper technological attitude toward nature. They ask whether even well-conceived restoration projects are in fact just expressions of human will. Higgs prefaces his responses to such concerns by distinguishing among several types of ecological restoration. He also describes a growing gulf between professionals and amateurs. Higgs finds much merit in criticism about technological restoration projects which can cause more damage than they undo. These projects often ignore the fact that changing one thing in a complex system can change the whole system. For restoration projects to be successful, Higgs argues, people at the community level must be engaged. These focal restorations bring communities together, helping volunteers develop a dedication to place and encouraging democracy.

Restorative Redevelopment of Devastated Ecocultural Landscapes Robert L. France, 2016-04-19 A fusion of ecological restoration and sustainable development, restorative redevelopment represents an emerging paradigm for remediating landscapes. Rather than merely fixing the broken bits and pieces of nature, restorative development advocates the reuse of devastated landscapes to improve the value and livability of a location for humans at the

Placing Nature on the Borders of Religion, Philosophy and Ethics Dr Forrest Clingerman, Mr Mark H Dixon, 2013-06-28 The natural world has been humanized; even areas thought to be wilderness bear the marks of human impact. But this human impact is not simply physical. At the emergence of the environmental movement, the focus was on human effects on nature. More recently, however, the complexity of the term nature has led to fruitful debates and the recognition of how human individuals and cultures interpret their environments. This book furthers the dialogue on religion, ethics, and the environment by exploring three interrelated concepts: to recreate, to replace, and to restore. Through interdisciplinary dialogue, the authors illuminate certain unique dimensions at the crossroads between finding value, creating value, and reflecting on one's place in the world. Each of these terms has diverse religious, ethical, and scientific connotations. Each converges on the ways in which humans both think about and act upon their surroundings. And each radically questions the damaging conceptual divisions between nature and culture, human and environment, and scientific explanation and religious ethical understanding. This book self-consciously

Courtyard Housing and Cultural

Sustainability Donia Zhang, 2016-05-13 Cultural sustainability is a very important aspect of the overall sustainability framework and is regarded as the fourth pillar alongside the other three environmental economic and social sustainability. However, the concept is neither fully explored nor widely accepted or recognized. This book elicits the interplay of nature culture architecture and theorizes the concept of cultural sustainability and culturally sustainable architecture. It identifies four key themes in Chinese philosophy: Harmony with Heaven, Harmony with Earth, Harmony with Humans, and Harmony with Self, along with Greek philosopher Aristotle's physics form space, matter, and time. It sets them as criteria to evaluate the renewed and new courtyard housing projects constructed in China since the 1990s. Using an innovative architectural and social science approach, this book examines the political, economic, social, and spatial factors that affect cultural sustainability. Supported by a multiplicity of data, including field surveys, interviews with residents, architects, and planners, time diaries, drawings, photos, planning documents, observation notes, and real estate brochures, the book proposes new courtyard garden house design strategies that promote healthy communities and human care for one another, a concept that is universally applicable. The volume is a first opportunity to take a holistic view to encompass eastern and western tangible and intangible cultures in the theorization of cultural sustainability and culturally sustainable architecture. It is a comprehensive contribution to architectural theory.

Beyond Naturalness David N. Cole, Laurie Yung, 2012-06-22 The central concept guiding the management of parks and wilderness over the past century has been naturalness. To a large extent, the explicit purpose in establishing these special areas was to keep them in their natural state. But what does that mean, particularly as the effects of stressors such as habitat fragmentation, altered disturbance regimes, pollution, invasive species, and climate change become both more pronounced and more pervasive? *Beyond Naturalness* brings together leading scientists and policymakers to explore the concept of naturalness, its varied meanings, and the extent to which it provides adequate guidance regarding where, when, and how managers should intervene in ecosystem processes to protect park and wilderness values. The main conclusion is the idea that naturalness will continue to provide an important touchstone for protected area conservation, but that more specific goals and objectives are needed to guide stewardship. The issues considered in *Beyond Naturalness* are central, not just to conservation of parks, but to many areas of ecological thinking, including the fields of conservation biology and ecological restoration, and represent the cutting edge of discussions of both values and practice in the twenty-first century. This book offers excellent writing and focus along with remarkable clarity of thought on some of the difficult questions being raised in light of new and changing stressors such as global environmental climate change.
