Public Regulation Elizabeth E. Bailey, 1987 **Informational Approaches to Regulation** Wesley A. Magat, W. Kip Viscusi, 1992 Their set of original studies of household chemicals energy audits and food risk labeling establishes guidelines for the design and evaluation of these informational regulations How does risk labeling information on hazardous household chemicals and pesticides influence consumer behavior While many studies speculate on the effects of risk information Magat and Viscusi draw on a series of extensive surveys to assess the likely response Their set of original studies of household chemicals energy audits and food risk labeling establishes guidelines for the design and evaluation of these informational regulations Their findings also include new estimates of the valuation of nonfatal health risks the first estimates in the literature of the role of altruism and an assessment of the influence of irrational responses to risk Although economists suggest that giving consumers information about potentially hazardous goods is preferable to direct regulation of product content implementation of information regulation raises a host of issues that need to be addressed Magat and Viscusi document the cognitive limitations that consumers have in processing information and break new ground by showing how given this behavior the informational regulations should be designed Case studies assess the degree to which different kinds of consumers notice remember and heed printed warnings in a range of wordings and formats They then examine risk valuation showing how much consumers are willing to pay for increased product safety under various conditions A concluding chapter synthesizes the results and discusses their implications for regulatory policy **New Perspectives on Research, Policy & Practice in Public Entrepreneurship** Joyce Liddle, 2016-06-01 Innovation is embedded into daily routines public service activities and interactions with non state actors making it difficult to uncover excellent practices but these chapters illustrate how innovative and entrepreneurial actors can be Scholars have contributed ample evidence of flourishing innovation and enterprise in this important field *Regulatory Reform* Mark Armstrong, Simon Cowan, John Vickers, 1994 Tackles the important issue of how to regulate firms with market power *Tort Law and Economics* Michael Faure, 2009-01-01 The central goal of this book is to provide a state of the art overview of the literature with respect to the economic analysis of tort law It sure meets the challenge offering with great expertise a comprehensive presentation of tort law in both economic and comparative perspectives The clarity of the text unusual in the law and economics literature makes the book accessible to a broad readership of economists with a limited legal background and lawyers with limited economic skills Olivier Moreteau Louisiana State University US Tort Law and Economics ed Michael Faure provides a highly useful economic overview of the most important topics of tort law The authors clearly show the main developments of the discussion examining the results of recent studies and stating their own opinions Detailed bibliographies are included The volume has to be warmly recommended to friends and foes of economic analysis who are provided with a comprehensive update in this field while also indicating areas which critics have to focus on Helmut Koziol European Centre of Tort and Insurance Law Austria

This volume provides a state of the art overview of the literature on the economic analysis of tort law. In sixteen chapters the specialist authors guide the reader through the often vast literature in each domain providing a balanced and comprehensive summary. Particular attention is paid to the evolution of the field, further refinements to economic models and relevant conclusions and lessons for the policymaker. Tort Law and Economics is part of the Encyclopedia of Law and Economics and enables readers some not familiar with law and economics to obtain an insight in the relevant economic literature concerning tort law and economics. This book will be of interest to lawyers and economists, practitioners and academics interested in accident law, tort law, insurance and regulation. It will also appeal to students in economic analysis of law and policymakers working on prevention of accidents, tort law or compensation of accident victims. *Bureaucrats in Business*, 1995. Refer review of this policy book in Journal of International Development vol 10 7 1998 pp 841 855. Cost Proxy Models and Telecommunications Policy Farid Gasmi, 2002. CD ROM contains Programs and data that verify report results presented in the text. *Calculating Risks?* James Hamilton, W. Kip Viscusi, 1999. By matching agency decision data to detailed census information using geographic information systems GIS technology the authors show that most hazardous waste sites do not pose sufficient risk to merit the most stringent cleanup options. Those sites that do pose considerable risk to exposed populations often receive inadequate attention because government decisions to target cleanups are based more on political factors than on actual risks. The authors propose policy reforms that could significantly reduce cleanup costs without sacrificing the protection of human health. BOOK JACKET. *Deregulation and the Future of Intercity Passenger Travel* John Robert Meyer, Clinton V. Oster, 1987. This book surveys the latest changes in the turbulent area of airline deregulation. The authors' third collaboration on the subject it deals with such current trends and topics as the proliferation of mergers and takeovers and the strategies and tactics involved in price wars and other marketing ventures. At the same time *Deregulation and the Future of Intercity Passenger Travel* is much more than an update on changes in the airline industry. It studies all the major systems of intercity passenger transportation: automobiles, buses, trains, airplanes from the point of view of their interdependency. And it extends well beyond recent events to embrace the transportation history of much of this century, discussing the historical precedents and outcomes that have collectively given impetus to the trends in operation today with special emphasis on the patterns of governmental subsidies and regulations. The authors also forecast probable developments in the next century, examining the impacts of various assumptions about future public policies, changes in technology, demographic patterns and consumer preferences. The first part of the book focuses on the U.S. experience with airline deregulation, including changes in distribution channels and the travel agency business as well as the effects on airline employees and passengers. The second part takes up the economics of competition among the major modes in intercity travel. John R. Meyer is James W. Harpel Professor of Capital Formation and Economic Growth at Harvard University. Clinton V. Oster Jr. is Associate Professor at the School of Public and Environmental Affairs and Director of the Transportation Research
