  Revue Semestrielle Des Publications Mathematiques ,1893   **Proceedings of the London Mathematical Society** London Mathematical Society,1925 Papers presented to J E Littlewood on his 80th birthday issued as 3d ser v 14 A 1965   **Revue Semestrielle Des Publications Mathématiques** ,1927   **Projects and Publications of the National Applied Mathematics Laboratories** ,1947   Laminational Models for Some Spaces of Polynomials of Any Degree Alexander Blokh,Lex Oversteegen,Ross Ptacek,Vladlen Timorin,2020-09-28 The so called pinched disk model of the Mandelbrot set is due to A Douady J H Hubbard and W P Thurston It can be described in the language of geodesic laminations   List of Officers and Members, Constitution, and By-laws, Annual Reports American Mathematical Society,1900   NBS Special Publication ,1968   **Moduli Spaces, Virtual Invariants and Shifted Symplectic Structures** Young-Hoon Kiem,2025-03-25 Enumerative geometry is a core area of algebraic geometry that dates back to Apollonius in the second century BCE It asks for the number of geometric figures with desired properties and has many applications from classical geometry to modern physics Typically an enumerative geometry problem is solved by first constructing the space of all geometric figures of fixed type called the moduli space and then finding the subspace of objects satisfying the desired properties Unfortunately many moduli spaces from nature are highly singular and an intersection theory is difficult to make sense of However they come with deeper structures such as perfect obstruction theories which enable us to define nice subsets called virtual fundamental classes Now enumerative numbers called virtual invariants are defined as integrals against the virtual fundamental classes Derived algebraic geometry is a relatively new area of algebraic geometry that is a natural generalization of Serre s intersection theory in the 1950s and Grothendieck s scheme theory in the 1960s Many moduli spaces in enumerative geometry admit natural derived structures as well as shifted symplectic structures The book covers foundations on derived algebraic and symplectic geometry Then it covers foundations on virtual fundamental classes and moduli spaces from a classical algebraic geometry point of view Finally it fuses derived algebraic geometry with enumerative geometry and covers the cutting edge research topics about Donaldson Thomas invariants in dimensions three and four   **Publications of the National Bureau of Standards** United States. National Bureau of Standards,1986   **Representation Theory and Algebraic Geometry** Vladimir Baranovsky,Nicolas Guay,Travis Schedler,2022-06-15 The chapters in this volume explore the influence of the Russian school on the development of algebraic geometry and representation theory particularly the pioneering work of two of its illustrious members Alexander Beilinson and Victor Ginzburg in celebration of their 60th birthdays Based on the work of speakers and invited participants at the conference Interactions Between Representation Theory and Algebraic Geometry held at the University of Chicago August 21 25 2017 this volume illustrates the impact of their research and how it has shaped the development of various branches of mathematics through the use of D modules the affine Grassmannian symplectic algebraic geometry and other topics All

authors have been deeply influenced by their ideas and present here cutting edge developments on modern topics Chapters are organized around three distinct themes Groups algebras categories and representation theory D modules and perverse sheaves Analogous varieties defined by quivers Representation Theory and Algebraic Geometry will be an ideal resource for researchers who work in the area particularly those interested in exploring the impact of the Russian school **Carnegie Institution of Washington Publication** ,1907 *Annual Register* American Mathematical Society,1900 On L-Packets for Inner Forms of SL_n Kaoru Hiraga,Hiroshi Saito,2012 The theory of L indistinguishability for inner forms of SL_2 has been established in the well known paper of Labesse and Langlands L indistinguishability forSL 2 Canad J Math 31 1979 no 4 726 785 In this memoir the authors study L indistinguishability for inner forms of SL_n for general n Following the idea of Vogan in The local Langlands conjecture Representation theory of groups and algebras 305 379 Contemp Math 145 1993 they modify the S group and show that such an S group fits well in the theory of endoscopy for inner forms of SL_n

Introduction to the Modern Theory of Dynamical Systems Anatole Katok,A. B. Katok,Boris Hasselblatt,1995 This book provided the first self contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with most of the main areas of mathematics The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms The book begins with a discussion of several elementary but fundamental examples These are used to formulate a program for the general study of asymptotic properties and to introduce the principal theoretical concepts and methods The main theme of the second part of the book is the interplay between local analysis near individual orbits and the global complexity of the orbit structure The third and fourth parts develop the theories of low dimensional dynamical systems and hyperbolic dynamical systems in depth Over 400 systematic exercises are included in the text The book is aimed at students and researchers in mathematics at all levels from advanced undergraduate up **Groups and Topological Dynamics** Volodymyr Nekrashevych,2022-10-11 This book is devoted to group theoretic aspects of topological dynamics such as studying groups using their actions on topological spaces using group theory to study symbolic dynamics and other connections between group theory and dynamical systems One of the main applications of this approach to group theory is the study of asymptotic properties of groups such as growth and amenability The book presents recently developed techniques of studying groups of dynamical origin using the structure of their orbits and associated groupoids of germs applications of the iterated monodromy groups to hyperbolic dynamical systems topological full groups and their properties amenable groups groups of intermediate growth and other topics The book is suitable for graduate students and researchers interested in group theory transformations defined by automata topological and holomorphic dynamics and theory of topological groupoids Each chapter is supplemented by exercises of various levels of complexity Geometry of Moduli Spaces and Representation Theory Roman Bezrukavnikov,Alexander Braverman,Zhiwei Yun,2017-12-15 This book is based on lectures given at the Graduate Summer School of the 2015 Park

City Mathematics Institute program Geometry of moduli spaces and representation theory and is devoted to several interrelated topics in algebraic geometry topology of algebraic varieties and representation theory Geometric representation theory is a young but fast developing research area at the intersection of these subjects An early profound achievement was the famous conjecture by Kazhdan Lusztig about characters of highest weight modules over a complex semi simple Lie algebra and its subsequent proof by Beilinson Bernstein and Brylinski Kashiwara Two remarkable features of this proof have inspired much of subsequent development intricate algebraic data turned out to be encoded in topological invariants of singular geometric spaces while proving this fact required deep general theorems from algebraic geometry Another focus of the program was enumerative algebraic geometry Recent progress showed the role of Lie theoretic structures in problems such as calculation of quantum cohomology K theory etc Although the motivation and technical background of these constructions is quite different from that of geometric Langlands duality both theories deal with topological invariants of moduli spaces of maps from a target of complex dimension one Thus they are at least heuristically related while several recent works indicate possible strong technical connections The main goal of this collection of notes is to provide young researchers and experts alike with an introduction to these areas of active research and promote interaction between the two related directions *Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of Congress, at Washington, Under the Copyright Law ... Wherein the Copyright Has Been Completed by the Deposit of Two Copies in the Office* Library of Congress. Copyright Office,1972 **Revue semestrielle des publications mathématiques** ,1932 *Handbook of Geometry and Topology of Singularities V: Foliations* Felipe Cano,José Luis Cisneros-Molina,Lê Dũng Tráng,José Seade,2024-06-05 This is the fifth volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research Singularities are ubiquitous in mathematics and science in general and singularity theory is a crucible where different types of mathematical problems converge surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects This Volume V focuses on singular holomorphic foliations which is a multidisciplinary field and a whole area of mathematics in itself Singular foliations arise for instance by considering The fibers of a smooth map between differentiable manifolds with singularities at the critical points The integral lines of a vector field or the action of a Lie group on a manifold The singularities are the orbits with special isotropy The kernel of appropriate 1 forms The singularities are the zeros of the form Open books which naturally appear in singularity theory as foliations with singular set the binding These important examples highlight the deep connections between foliations and singularity theory This volume like its companion Volume VI also focused on foliations consists of nine chapters authored by world experts which provide in depth and reader friendly introductions to some of the foundational aspects of the theory These introductions also give insights into important lines of further research The volume starts with a foreword by one of

the current world leaders in the theory of complex foliations The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook   *Ergodic Theory, Analysis, and Efficient Simulation of Dynamical Systems* Bernold Fiedler,2012-12-06 This book summarizes and highlights progress in our understanding of Dy namical Systems during six years of the German Priority Research Program Ergodic Theory Analysis and Efficient Simulation of Dynamical Systems The program was funded by the Deutsche Forschungsgemeinschaft DFG and aimed at combining focussing and enhancing research efforts of active groups in the field by cooperation on a federal level The surveys in the book are addressed to experts and non experts in the mathematical community alike In addition they intend to convey the significance of the results for applications far into the neighboring disciplines of Science Three fundamental topics in Dynamical Systems are at the core of our research effort behavior for large time dimension measure and chaos Each of these topics is of course a highly complex problem area in itself and does not fit naturally into the deplorably traditional confines of any of the disciplines of ergodic theory analysis or numerical analysis alone The necessity of mathematical cooperation between these three disciplines is quite obvious when facing the formidahle task of establishing a bidirectional transfer which bridges the gap between deep detailed theoretical insight and relevant specific applications Both analysis and numerical analysis playa key role when it comes to huilding that bridge Some steps of our joint bridging efforts are collected in this volume Neither our approach nor the presentations in this volume are monolithic
