Evans, C. Haslett, 2013-11-11 Great progress has been made since the first description of the acute respiratory distress syndrome by the Denver group in 1967 Lancet Although we introduced the term adult respiratory distress syndrome in our second and more detailed description of the syndrome in 1971 this was probably a mistake for the simple reason that children also suffer the same syndrome following acute lung insults Today the

syndrome of acute respiratory distress in adults ARDS is recognized as a worldwide problem but the prevalence of disease varies in different parts of the world A huge amount of research has focused on the mechanisms of acute lung injury and yet the exact sequence of events and mediators in inflammatory cascade which result in acute respiratory failure from ARDS is not known but many possibilities exist The definition of ARDS has been gradually modified in recent years and investigators around the world are now collaborating in order to establish more uniform concepts in identification risk factors and mechanisms of lung injury which someday will result in improved approaches to management Already at least some centers are showing improved outcomes in ARDS achieving an approximate 60% survival rate In the past most large series documented only about a 40% survivability taking all causes of ARDS This apparent progress is likely attributable to more meticulous and disciplined care than any specific pharmacologic attack on the basic mechanism resulting in ARDS
