

Chapter 36 Patients with Special Challenges

Introduction

Some examples of patients with special challenges include:

- Children who were born prematurely and who have associated respiratory problems
- Infants or small children with congenital heart disease
- Patients with neurologic disease
- Patients with congenital or acquired diseases resulting in altered body function that requires medical assistance for breathing, urination, eating, or bowel function
- Patients with sensory deficits such as hearing or visual impairments
- Geriatric patients with chronic diseases requiring visitation from a home health care service

Intellectual Disability

Developmental disability: insufficient development of the brain, resulting in some level of dysfunction or impairment

An intellectual disability may be caused by genetic factors, congenital infections, complications at birth, malnutrition, or environmental factors.

Autism spectrum disorder (ASD): a general term used to describe a group of complex disorders of brain development that vary greatly in signs and symptoms

- **Autism:** a pervasive developmental disorder characterized by impairment of social interaction

Down syndrome: characterized by a genetic chromosomal defect resulting in mild to severe intellectual impairment

- The normal human somatic cell contains 23 pairs of chromosomes. In most cases, down syndrome (trisomy 21) occurs when the two 21st chromosomes fail to separate, so that the ovum or sperm contains 24 chromosomes.

Brain Injury

Take the time to talk with the patient and family to understand what is normal for the patient. Talk in a calm, soothing tone, and watch the patient closely for signs of anxiety or aggression.

Sensory Disabilities

Always talk and walk a visually impaired patient through the steps of what is going to happen.

The two most common forms of hearing loss are sensorineural deafness and conductive hearing loss.

- **Sensorineural deafness:** a permanent lack of hearing caused by a lesion or damage of the inner ear

coverage of anatomy physiology and pathophysiology to form an advanced understanding of the human body and disease processes expected of today's paramedic. Three new chapters have been added to this edition: Community Paramedicine, Research and Quality, and Mechanical Ventilation. The first two represent areas of growth in the scope, role, and importance of paramedics in an integrated health care system. The third acknowledges the paramedics' ability to provide advanced therapies prior to arrival at the hospital and a growing reliance on paramedics in transfer of critically ill patients in a regionalized delivery of care.

Clear Approach to Patient Assessment and Management The Seventh Edition teaches and reinforces the concept of patient assessment with a single comprehensive chapter ensuring that students understand patient assessment as a single integrated process the way that providers actually practice it in the field. Each clinical chapter reinforces the steps of the patient assessment process within the context of the illnesses or injuries discussed in the chapter.

Strong Application to Real World EMS Patient case studies evolve throughout every chapter, offering students a genuine context for the application of the knowledge presented. This approach shows the student how all of the information will be used to help patients in the field. An additional case concludes each chapter and presents critical thinking questions to cement the chapter's concepts.

Accessible Language Since the first edition published in 1972, *Emergency Care in the Streets* has been known for its clear, accessible language that provides the most effective learning for students. The Seventh Edition continues Dr. Caroline's legacy with world-class medical content written in a manner that is relevant to today's practice of paramedicine.

Advanced Emergency Care and Transportation of the Sick and Injured, 2012 The foundation for EMS education was established in 1971 when the American Academy of Orthopaedic Surgeons (AAOS) authored the first emergency medical technician textbook. Since then, the AAOS has set the gold standard for EMS training programs with the Orange Book Series. This Second Edition, based on *Intermediate Emergency Care and Transportation of the Sick and Injured*, raises the bar even higher with world-class medical content and innovative instructional resources that meet the diverse needs of today's educators and students. Based on the new National EMS Education Standards for Advanced Emergency Medical Technician, the Second Edition offers complete coverage of every competency statement with clarity and precision in a concise format that ensures student comprehension and encourages critical thinking. New cognitive and didactic material is presented along with new skills and features to create an innovative AEMT training solution. Topics including advanced pathophysiology, acid-base balance, fluids and electrolytes, intravenous therapy, intraosseous access, blood glucose monitoring, and administration of AEMT-level medications tailor this textbook to the new Advanced EMT level. Additional online skills allow this textbook to be customized for every AEMT training program's unique needs.

Current State of the Art Medical Content *Advanced Emergency Care and Transportation of the Sick and Injured*, Second Edition, incorporates up-to-date evidence-based medical concepts to ensure that students are taught assessment and treatment modalities that will help patients in the field today.
