Punishing the Patient Richard Gosden, 2001 Ninety per cent of those diagnosed with schizophrenia are treated often involuntarily with drugs that manage but do not cure the condition This book discusses the many human rights problems that arise from this treatment It also asks whether it is possible to understand schizophrenia differently and what follows if we do

How to Become a Schizophrenic John Modrow, 2003 demonstrates the physical psychological and social harm resulting from the label schizophrenic and the continuous need to reexamine the underpinnings and attitudes of psychiatry Booklist Of all the books written about schizophrenia none is more comprehensive accurate thorough and clearer in style and statement than John Modrow s classic *How to Become a Schizophrenic* Modrow who is a recovered schizophrenic and is perhaps the unrecognized and unappreciated world s foremost authority on this disorder has performed a truly invaluable service and has made the major contribution to our understanding of the causes and cures of this pseudodisease Robert A Baker Ph D former chairman of the Department of Psychology University of Kentucky author of *They Call It Hypnosis Hidden Memories Voices and Visions from Within* and *Mind Games Are We Obsessed with Therapy* One of the best things I ve read on the subject I am struck by the richness of the ideas and the research and the soundness of the conclusions Peter Breggin M D founder and director of the International Center for the Study of Psychiatry and Psychology author of *Toxic Psychiatry and Talking Back to Prozac* a very important contribution to the field Theodore Lidz M D former chairman of the Department of Psychiatry Yale University author of *The Origin and Treatment of Schizophrenic Disorders and Schizophrenia and the Family* well researched and easily readable a difficult combination to achieve Judi Chamberlin author of *On Our Own Patient Controlled Alternatives to the Mental Health System* meticulously challenges all the major research that claims that schizophrenia is a biological disorder Ty C Colbert Ph D author of *Broken Brains or Wounded Hearts What Causes Mental Illness* Before reading the book I was largely convinced that schizophrenia was primarily a brain disease Modrow has forced me to take a second look however and reconsider the psychological causes of the condition The Vancouver Sun it is ennobling that despite bad and discouraging treatment he was able to understand himself and others and share that acquired knowledge in an accurate and helpful way Bertram P Karon PhD professor of clinical psychology Michigan State University author of *Psychotherapy of Schizophrenia* gives clear proof that there s real hope Truly a remarkable book Alan Caruba Bookviews [Models of Madness](#) John Read, Loren R. Mosher, Richard P. Bentall, 2004 *Models of Madness* shows that hallucinations and delusions are understandable reactions to life events and circumstances rather than symptoms of a supposed genetic predisposition or biological disturbance International contributors critique the medical model of madness examine the dominance of the illness approach to understanding madness from historical and economic perspectives document the role of drug companies outline the alternative to drug based solutions identify the urgency and possibility of prevention of madness *Models of Madness* promotes a more humane and effective response to treating severely distressed people that will prove essential reading for

Monsters in Society: An Interdisciplinary Perspective Andrea S. Dauber,2019-01-04 This volume was first published by Inter Disciplinary Press in 2014 Are monsters and the monstrous phenomena that transition time and space If monsters were a part of our past and are a part of our present will they be a part of our future This volume demonstrates the universality of monsters and the ubiquitous nature of monsterisation from different perspectives and shows that the creation of monsters and our ongoing confrontation with them is bound by human sociality so much so that the monsters we have been surrounded by and will encounter in the future bear characteristics that mirror inherently human modes of identity construction for example via age gender and visual appearance This process can differ across life stages such as childhood versus adulthood Monsters or what a society identifies as monstrous are not simply cultural artefacts communicated via literature historical accounts or modern media productions such as films or series They are integral components of the human psyche Therefore they have existed in symbiosis with the homo socius and will probably continue to do so in his future

Models of Madness Dr John Read, Professor Richard Bentall, Loren Mosher, John Read, Jacqui Dillon, 2013-06-19 Are hallucinations and delusions really symptoms of an illness called schizophrenia Are mental health problems really caused by chemical imbalances and genetic predispositions Are psychiatric drugs as effective and safe as the drug companies claim Is madness preventable This second edition of Models of Madness challenges those who hold to simplistic pessimistic and often damaging theories and treatments of madness In particular it challenges beliefs that madness can be explained without reference to social causes and challenges the excessive preoccupation with chemical imbalances and genetic predispositions as causes of human misery including the conditions that are given the name schizophrenia This edition updates the now extensive body of research showing that hallucinations delusions etc are best understood as reactions to adverse life events and that psychological and social approaches to helping are more effective and far safer than psychiatric drugs and electroshock treatment A new final chapter discusses why such a damaging ideology has come to dominate mental health and most importantly how to change that Models of Madness is divided into three sections Section One provides a history of madness including examples of violence against the mentally ill before critiquing the theories and treatments of contemporary biological psychiatry and documenting the corrupting influence of drug companies Section Two summarises the research showing that hallucinations delusions etc are primarily caused by adverse life events eg parental loss bullying abuse and neglect in childhood poverty etc and can be understood using psychological models ranging from cognitive to psychodynamic Section Three presents the evidence for a range of effective psychological and social approaches to treatment from cognitive and family therapy to primary prevention This book brings together thirty seven contributors from ten countries and a wide range of scientific disciplines It provides an evidence based optimistic antidote to the pessimism of biological psychiatry Models of Madness will be essential reading for all involved in mental health including service users family members service managers policy makers nurses clinical
