Practical Puppetry A-Z Carol R. Exner,2005-09-08 Puppetry is an exciting flexible malleable art form that can engage the creative forces of children or adults Puppets can not only tell a story they can be used to enhance the curriculum present an idea or a concept in a compelling way or teach any number of necessary skills Children and adults presenting a puppet play are given a sense of their own inventive power This reference work offers an A to Z view of working with puppets It covers everything from the basic strategies of advertising and marketing puppet productions to assembling the puppets out of household materials such as paper bags cereal boxes or gloves to the more elaborate sculpting of armatures Stages curtains and props are also discussed along with the history of puppetry Numerous illustrations give a visual of many of the finished products This work concludes with an annotated bibliography and index Women in the Shadows Jennifer

Goodlander,2016-10-31 Wayang kulit or shadow puppetry connects a mythic past to the present through public ritual performance and is one of most important performance traditions in Bali The dalang or puppeteer is revered in Balinese society as a teacher and spiritual leader Recently women have begun to study and perform in this traditionally male role an innovation that has triggered resistance and controversy In Women in the Shadows Jennifer Goodlander draws on her own experience training as a dalang as well as interviews with early women dalang and leading artists to upend the usual assessments of such gender role shifts She argues that rather than assuming that women performers are necessarily mounting a challenge to tradition tradition in Bali must be understood as a system of power that is inextricably linked to gender hierarchy She examines the very idea of tradition and how it forms both an ideological and social foundation in Balinese culture Ultimately Goodlander offers a richer more complicated understanding of both tradition and gender in Balinese society Following in the footsteps of other eminent reflexive ethnographies Women in the Shadows will be of value to anyone interested in performance studies Southeast Asian culture or ethnographic methods **Troubleshooting Puppet**

indicates better alternatives      **Trust and Skepticism** Elizabeth J. Robinson, Shiri Einav, 2014-04-16 Children learn a great deal from other people including history science and religion as well as language itself Although our informants are usually well intentioned they can be wrong and sometimes people deceive deliberately As soon as children can learn from what others tell them they need to be able to evaluate the likely truth of such testimony This book is the first of its kind to provide an overview of the field of testimony research summarizing and discussing the latest findings into how children make such evaluations when do they trust what people tell them and when are they skeptical The nine chapters are organized according to the extent to which testimony is necessary for children to learn the matter in question from cases where children are entirely dependent on the testimony of others to cases where testimony is merely a convenient way of learning Chapters also consider situations where reliance on testimony can lead a child astray and the need for children to learn to be vigilant to deception to ask questions appropriately and to evaluate what they are told With an international range of contributors and two concluding commentaries which integrate the findings within a broader perspective of research on child development the book provides a thorough overview of this emerging sub field Trust and Skepticism will be essential reading for researchers academic teachers and advanced students working in the areas of cognitive development and language development and will also be of great interest to educationists concerned with nursery and primary education      †

*3 numerically solving pde s crank nicholson algorithm* - Feb 09 2023

web crank nicholson algorithm which has the virtues of being unconditionally stable i e for all  $k \Delta t$  and also is second order accurate in both the  $x$  and  $t$  directions i e one can get a given level of accuracy with a coarser grid in the time direction and hence less computation cost this is the algorithm
